FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d)
OF THE SECURITIES EXCHANGE ACT OF 1934

[X] ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF
1934

For the fiscal year ended March 31, 2013

Commission file number 000-21783

(Exact name of Registrant as Specified in its Charter)

Delaware

(State or Other Jurisdiction of Incorporation or Organization)

77-0142404

(I.R.S. Employer Identification Number)

2125 O'Nel Drive
San Jose, CA 95131

(Address of Principal Executive Offices including Zip Code)

(408) 727-1885

(Registrant's Telephone Number, Including Area Code)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class

Name of each exchange on which
registered

COMMON STOCK, PAR VALUE \$.001 PER

Edgar Filing: 8X8 INC /DE/ - Form 10-K

SHARE

NASDAQ Stock Market LLC

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
YES NO

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. YES NO

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15 (d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file reports), and (2) has been subject to such filing requirements for the past 90 days. YES NO

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). YES NO

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K, or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company. See definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act).
YES NO

Based on the closing sale price of the Registrant's common stock on the NASDAQ Capital Market System on September 30, 2012, the aggregate market value of the voting stock held by non-affiliates of the Registrant was \$420,764,160. For purposes of this disclosure, shares of common stock held by persons who hold more than 5% of the outstanding shares of common stock and shares held by officers and directors of the Registrant have been excluded because such persons may be deemed to be affiliates. The determination of affiliate status for this purpose is not necessarily a conclusive determination for any other purpose.

The number of shares of the Registrant's common stock outstanding as of May 20, 2013 was 72,139,169.

DOCUMENTS INCORPORATED BY REFERENCE

Items 10, 11, 12, 13 and 14 of Part III incorporate information by reference from the Proxy Statement to be filed within 120 days of March 31, 2013 for the 2013 Annual Meeting of Stockholders.

ITEM 1. BUSINESS

Forward-Looking Statements and Risk Factors

Statements contained in this annual report on Form 10-K, or Annual Report, regarding our expectations, beliefs, estimates, intentions or strategies are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Any statements contained herein that are not statements of historical fact may be deemed to be forward-looking statements. For example, words such as "may," "will," "should," "estimates," "predicts," "potential," "continue," "strategy," "believes," "anticipates," "plans," "expects," "intends," and similar expressions are intended to identify forward-looking statements. You should not place undue reliance on these forward-looking statements. Actual results and trends may differ materially from historical results or those projected in any such forward-looking statements depending on a variety of factors. These factors include, but are not limited to, customer acceptance and demand for our voice over Internet protocol, or VoIP, telephony products and services, the reliability of our services, the prices for our services, customer renewal rates, customer acquisition costs, actions by our competitors, including price reductions for their telephone services, potential federal and state regulatory actions, compliance costs, potential warranty claims and product defects, our needs for and the availability of adequate working capital, our ability to innovate technologically, the timely supply of products by our contract manufacturers, potential future intellectual property infringement claims that could adversely affect our business and operating results, and our ability to retain our listing on the NASDAQ Capital Market. The forward-looking statements may also be impacted by the additional risks faced by us as described in this Report, including those set forth under the section entitled "Risk Factors." All forward-looking statements included in this Annual Report are based on information available to us on the date hereof, and we assume no obligation to update any such forward-looking statements. Readers are urged to carefully review and consider the various disclosures made in this Annual Report, which attempt to advise interested parties of the risks and factors that may affect our business, financial condition, results of operations and prospects.

Our fiscal year ends on March 31 of each calendar year. Each reference to a fiscal year in this Annual Report, refers to the fiscal year ended March 31 of the calendar year indicated (for example, fiscal 2013 refers to the fiscal year ended March 31, 2013). Unless the context requires otherwise, references to "we," "us," "our," "8x8" and the "Company" refer to 8x8, Inc. and its consolidated subsidiaries.

Overview

8x8 develops and markets telecommunications services for Internet protocol, or IP, telephony and video applications as well as contact center, web-based conferencing and unified communications services, and cloud-based computing services. We offer the 8x8 Virtual Office hosted PBX (private branch exchange) service, 8x8 Virtual Contact Center service, 8x8 Virtual Office Pro Unified Communications Solution and 8x8 Cloud-Based Computing Solutions.

We initially marketed our services under the Packet8 brand. In May 2009, we began marketing our services under the 8x8 brand. As of March 31, 2013, we had more than 32,500 business customers who use our services as their primary business telephone system, including IP dial tone, long distance and all of the business class features typically associated with a traditional business phone system or PBX. Each business customer subscribes to a number of various lines and services (*e.g.* physical phone extensions, virtual extensions, fax lines, toll free numbers, receptionist software, and unified communications services).

On September 15, 2011, we completed the acquisition of Contactual, Inc., a provider of cloud-based call center and customer interaction management solutions for approximately \$31.8 million which we paid by the issuance of a total of 6,484,900 shares of unregistered 8x8 common stock. Approximately 1,005,000 of the shares of 8x8 common stock issued as acquisition consideration are being held in escrow as security for the indemnification obligations of the

Contactual stockholders under the merger agreement.

Available Information

We were incorporated in California in February 1987 and reincorporated in Delaware in December 1996. We maintain a corporate Internet website at the address <http://www.8x8.com>. The contents of this website are not incorporated in or otherwise to be regarded as part of this Annual Report. We file reports with the Securities and Exchange Commission, or SEC, which are available on our website free of charge. These reports include annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to such reports, each of which is provided on our website as soon as reasonably practical after we electronically file such materials with or furnish them to the SEC. You can also read and copy any materials we file with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. You can obtain additional information about the operation of the Public Reference Room by calling the SEC at 1.800.SEC.0330. In addition, the SEC maintains a website (www.sec.gov) that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC, including 8x8.

Industry Background

We employ cloud-based technology, known as Voice over Internet Protocol ("VoIP"), to deliver our services. VoIP technology enables communications over the Internet through the compression of voice, video and/or other media into data packets that can be efficiently transmitted over data networks and then converted back into the original media at the other end. Data networks, such as the Internet or local area networks, or LANs, have always utilized packet-switched technology to transmit information between two communicating terminals (for example, a PC downloading a page from a web server, or one computer sending an e-mail message to another computer). IP is the most commonly used protocol for communicating on these packet switched networks. VoIP allows for the transmission of voice, video and data over these same packet-switched networks, providing an alternative to traditional telephone networks which use a fixed electrical path to carry voice signals through a series of switches to a destination.

As a result of the potential cost savings and added features of VoIP, many consumers, enterprises, traditional telecommunication service providers and cable television providers view VoIP as the future of telecommunications. VoIP has experienced significant growth in recent years due to:

- Demand for lower cost telephone service;
- Improved quality and reliability of VoIP calls due to technological advances, increased network development and greater bandwidth capacity;
- New product innovations that allow VoIP providers to offer services not currently offered by traditional telephone companies; and
- Increased awareness of the capabilities and benefits of cloud-based Software as a Service ("SaaS") alternatives to traditional premises-based systems

The traditional telephone networks maintained by many local and long distance telephone companies, known as the public-switched telephone networks, or PSTN, were designed solely to carry low-fidelity audio signals with a high level of reliability. Although these traditional telephone networks are very reliable for voice communications, we believe these networks are not well-suited to service the explosive growth of digital communication applications for the following reasons:

- They are expensive to build because each subscriber's telephone must be individually connected to the central office switch, which is usually several miles away from a typical subscriber's location;
- They transmit data at very low rates and resolutions, making them poorly suited for delivering high-fidelity audio, entertainment-quality video or other rich multimedia content;
- They use dedicated circuits for each telephone call which allot fixed bandwidth throughout the duration of each call, whether or not voice is actually being transmitted, which is an inefficient use of the investment in the network; and

- They may experience difficulty in providing new or differentiated services or functions, such as video communications, that the network was not originally designed to accommodate.

Until recently, traditional telephone companies have avoided the use of packet-switched networks for transmitting voice calls due to the potential for poor sound quality attributable to latency issues (delays) and lost packets which can prevent real-time transmission. Recent improvements in packet-switching technology, compression and broadband access technologies, as well as improved hardware and provisioning techniques, have significantly improved the quality and usability of packet-switched voice calls.

Historically, packet-switched networks were built mainly for carrying non real-time data, although they are now fully capable of transmitting real time data. The advantages of such networks are their efficiency, flexibility and scalability. Bandwidth is only consumed when needed. Networks can be built in a variety of configurations to suit the number of users, client/server application requirements and desired availability of bandwidth, and many terminals can share the same connection to the network. As a result, significantly more traffic can be transmitted over a packet-switched network, such as a home network or the Internet, than a circuit-switched telephony network. Packet-switching technology allows service providers to converge their traditionally separate voice and data networks and more efficiently utilize their networks by carrying voice, video, facsimile and data traffic over the same network. The improved efficiency of packet switching technology creates network cost savings that can be passed on to the consumer in the form of lower telephony rates.

The growth of the Internet in recent years has proven the scalability of these underlying packet-switched networks. As broadband connectivity, including fiber lines, cable modem and digital subscriber line ("DSL"), has become more available and less expensive, it is now possible for service providers like 8x8 to offer SaaS applications such as voice and video that run over these IP networks to businesses and residential consumers. Providing such services has the potential to both substantially lower the cost of telephone service and equipment to these customers and increase the breadth of features available to our subscribers. Services like full-motion, two-way video are now supported by the bandwidth spectrum commonly available to broadband customers.

The growing adoption of VoIP in the business community is part of a broader technological migration now occurring from traditional on-premise information technology ("IT") systems to cloud-based alternatives accessible from any location, network or device. This dramatic shift is enabling businesses to transition deployment and management of their IT infrastructure from a capital expenditure model to an operating expense approach, freeing valuable internal resources while gaining increased flexibility, capabilities and performance. According to a Frost & Sullivan March 2012 report, the inflection point for hosted/cloud communications has arrived as businesses have become more focused on issues such as cost management, accommodating dispersed and mobile workforces and the need to re-assign administrative IT staff to more strategic tasks.

Our Strategy

Our objective is to provide reliable, scalable, and profitable worldwide Internet-based communications services with unmatched quality by leveraging our patented software technologies to deliver innovative, competitively priced offerings. We intend to bring the best possible voice, video, unified communications, managed hosting and cloud-based computing services at an affordable price to businesses and enhance the ways in which these customers communicate with each other and the world. We intend to continue to focus our marketing primarily towards our business customer services.

Specific strategies to accomplish this objective include:

- *Build an indirect sales channel.* Our direct sales force generated more than 93% of our sales in fiscal 2013. In fiscal 2014, we intend to continue to build an indirect sales channel to expand distribution of our products and services. We intend to leverage our commercial relationships with our equipment vendors and the experience of our sales team to market our services. In addition, we intend to engage with other indirect sales channels to market our services.
- *Capitalize on our technological expertise to introduce new products and features.* Over the past 10 years, we have developed or acquired several core technologies that form the backbone of our video and VoIP service which we intend to use to develop product enhancements and future products. We developed the core software associated with the Virtual Office product line including the call control engine, protocol stacks and network address translation ("NAT") traversal firmware for the customer premise equipment. As a result, we are able to update the software functionality of our services without third party assistance and limit the

distribution of our unique customer premise equipment features such as NAT traversal to customer premise equipment that is sold in conjunction with our services. We were the first VoIP service provider to ship two-way video-enabled hardware, and our 8x8 Virtual Office services are among the most feature-rich hosted VoIP business services in the industry.

- *Offer the best possible service and support to our customers with a world class customer support organization.* We have an established call center and customer support group at our headquarters in San Jose, California and an outsourced call center operation located in Santa Maria, California. We also have invested in significant upgrades to our existing back office infrastructure to enhance the support we can provide to new and existing subscribers, as well as our distribution partners. Our strengths include customer service from technically sophisticated customer service agents providing support from onshore facilities located in California.

Our Services

Our services work over virtually any high-speed Internet connection worldwide to allow calls to or from any phone in the world, whether that phone is an IP phone, a mobile phone or a PSTN phone. 8x8's service utilizes IP customer premise equipment to enable plug and play installation and a familiar dial tone user interface. The 8x8 service also uses web-based technologies to enable unified communications services such as web conferencing and Internet fax as well as account setup, account management, billing and customer support. We have developed proprietary implementations of standards-based technologies underlying our 8x8 service, which works with third party carriers to terminate VoIP calls on the PSTN network.

8x8 Virtual Office Business Telephone Service

Our 8x8 Virtual Office business telephone service was launched in March 2004 and is targeted at the small and medium-sized business market. 8x8 Virtual Office is an affordable, easy-to-use alternative to traditional PBX systems or Centrex class services from legacy telecommunications providers that offers features and services neither provide. 8x8 Virtual Office allows users with a high-speed Internet connection anywhere in the world to be part of a virtual PBX that includes automated attendants to assist callers, conference bridges, extension-to-extension dialing and ring groups, in addition to a rich variety of other business class PBX features normally found on dedicated PBX equipment. 8x8 Virtual Office extensions do not require a dedicated communications infrastructure. The service is received through an office's existing Internet connection, thus eliminating the need for additional phone lines or digital subscriber lines for extensions, in contrast to traditional Centrex or PBX products. The service is provided by 8x8 software that runs on computing platforms located in our data centers.

8x8 Virtual Office subscribers have the ability to choose any phone number available to 8x8 subscribers regardless of a user's geographic location. Subscribers also can port existing telephone numbers, including toll-free numbers, from other service providers at no additional cost. Each extension in the virtual PBX can be located anywhere in the world that is serviced by a high-speed Internet connection. 8x8 Virtual Office extension-to-extension calls and transfers are accomplished over the Internet, anywhere in the world, free of extra charges from third party telecommunications carriers. 8x8 Virtual Office offers the following essential services for small and medium-sized businesses:

- Auto-attendant providing dial by extension, name or group;
- Unlimited calling to the US, Canada, 20 additional countries and other 8x8 subscribers, as well as low international rates;
- Unlimited 8x8 extension-to-extension dialing anywhere in the world;
- Direct Inward Dial ("DID") phone number with any desired area code for each extension;
- Conference bridge, 3-way calling, music on hold, call park/pick-up, call transfer, hunt groups, and do not disturb;
- Business-class voice mail including email alerts and direct transfer to mailbox;
- Call waiting / Caller-ID;
- Distinctive tone ringing; and
- Optional receptionist console application offering:
 - ◆ Multiple call viewing and handling;
 - ◆ Direct transfer to extension's voicemail;
 - ◆ Supervised transfers; and
 - ◆ View of extension status.

8x8 Virtual Contact Center

The 8x8 Virtual Contact Center service, introduced in July 2007 and delivered utilizing the software technology acquired from Contactual, Inc. ("Contactual"), is a fully integrated hosted call center solution that works with any broadband Internet connection and provides enterprise class contact center functionality combined with Virtual Office calling features. The 8x8 Virtual Contact Center allows companies to quickly deploy and operate multi-channel contact centers within 8x8's Virtual Office infrastructure without the time and expense of purchasing, installing and maintaining costly, specialized equipment. Delivered entirely as a hosted service, the 8x8 Virtual Contact Center requires no specialized hardware or software, no telecom equipment and no up-front capital expenditures, making it an

ideal solution for blending in-house, offsite or multi-site call center agents. Agents require nothing more than a web browser and a suitable voice device that can be provided by 8x8 or a third party service provider.

The 8x8 Virtual Contact Center service offers features such as skills-based routing, multi-media management, real time monitoring and reporting, voice recording and logging, historical reporting, Interactive Voice Response, CRM integration with Salesforce.com and NetSuite, and contact and case management tools.

8x8 IP Telephones

In the second half of fiscal 2011, we began selling Polycom IP phones and Polycom IP speakerphones. The Polycom IP phones deliver enhanced equipment and service features including high definition HD audio, corporate directory display and lookup, intercom paging, shared line appearance and Power over Ethernet capability. In fiscal 2012, we also began selling Cisco IP Phones.

In the second quarter of fiscal 2009, we launched the 8x8 675xi series of IP phones that incorporated 8x8's advanced NAT traversal technologies to facilitate the network-independent operational advantages of the 8x8 service. These advantages include the ability to simply plug the phone into any public or private Internet connection and immediately make or receive calls without performing any network or firewall configuration changes.

8x8 Virtual Office Pro Unified Communications

Introduced in January 2010, 8x8 Virtual Office Pro is a powerful unified communications service that allows subscribers to manage essential, advanced business communications functions online through a centralized web-based portal via a PC, laptop, tablet or smartphone. Integrated with the 8x8 Virtual Office phone service, Virtual Office Pro enhances business productivity by providing users with a complete, instantly accessible suite of communication tools used in everyday business interactions. In October 2010, we began selling the Virtual Office Pro service on a standalone basis so that a business customer would no longer be required to buy a physical IP telephone from us in order to access our Virtual Office services.

8x8 Virtual Office Pro delivers these tools through an easy-to-use online dashboard which provides:

- A visual overview and online control of 8x8 Virtual Office business calling activity including point-and-click access to inbound and outbound calls and call management features such as call transfer, do not disturb ("DND") and call forwarding;
- Microsoft Outlook Contacts and Corporate Directory integration;
- Virtual Meeting - allows subscribers to create, join and invite participants to web, audio and video meetings;
- Virtual Office Mobile extension - to place and receive VoIP calls and access common Virtual Office services and functions from an iPhone/iPod Touch/iPad/Android mobile handset;
- Fax - enables users to send and receive unlimited faxes using either a separate phone number for fax or the same number as your 8x8 extension;
- Call recording - enables any inbound or outbound call to be recorded and later reviewed, downloaded or deleted;
- Presence management - tells other co-workers whether a user is logged in, logged off, on the phone, off the phone or currently unavailable; and
- My Inbox overview - gives a comprehensive view of all voicemails, recordings, FAX messages, calls, and chat history.

8x8 Cloud-Based Computing Solutions

In May 2010, we introduced 8x8 managed hosting and cloud-based computing solutions that enable business customers to reduce costs and gain performance and reliability advantages by eliminating in-house ownership of server equipment and costly information technology systems management staff.

Sales, Marketing and Promotional Activities

We currently sell and market our 8x8 services to end users through our direct sales force, website, and third party resellers. Our inside sales force primarily handles inbound telephone calls and website leads which are generated from third party lead generation sources and direct web advertising such as Google, or traditional advertising channels such as in-flight magazines and billboards. Our sales departments consisted of 100 employees at the end of fiscal 2013.

Sales representatives are paid a base salary and monthly commission for selling our products and services. The commission is based on new sales made by the sales representative.

Competition

We face strong competition from incumbent telephone companies, cable companies and alternative voice and video communication providers. Because most of our target customers are already purchasing communications services from one or more of these providers, our success is dependent upon our ability to attract these customers away from their existing providers. This will potentially become more difficult as the early adopter market for VoIP services becomes saturated and mainstream customers make up more of our target market. We believe that the principal competitive factors affecting our ability to attract and retain customers are price, call quality, reliability, customer service, and enhanced services and features. For more information regarding the risks associated with such strong competition, please refer to Item 1A, Risk Factors, included under the heading "**Intense competition in the markets in which we compete could prevent us from increasing or sustaining our revenue and increasing or maintaining profitability.**"

Incumbent telephone companies

The incumbent telephone companies are our primary competitors and have historically dominated their regional markets. These competitors include AT&T, CenturyLink and Verizon Communications as well as rural incumbents, such as Windstream. These competitors are substantially larger and better capitalized than we are and have the advantage of a large existing customer base, and larger marketing budgets than we have. Moreover, they also provide some of the broadband services that are required to use our service, which is a significant competitive advantage.

Vendors of private branch exchange ("PBX") systems and alternative voice communications providers

Competitors for the 8x8 business service include traditional PBX and key system manufacturers and their resellers, including Cisco Systems, Inc., Avaya Holdings Corp., Mitel Networks Corporation, ShoreTel, Inc. and Toshiba, Centrex services offered by incumbent telephone companies, and VoIP services offered by XO Communications, Cbeyond, Inc. and other companies.

Operations

We have a centrally managed platform consisting of data management, monitoring, control and billing systems that support all of our products and services. We have invested substantial resources to develop and implement our real-time call management information system. Key elements of this system include a prospective customer quotation portal, customer provisioning, customer access, fraud control, network security, call routing, call monitoring, media processing and normalization, call reliability, and detailed call record storage and billing. Our platform monitors our process of digitizing and compressing voice and video into packets and transmitting these packets over data networks around the world. We maintain a call switching platform in software that manages call admission, call control, call rating and routes calls to an appropriate destination or customer premise equipment. Unless the recipient is using an Internet telephony device, the outgoing packets (representing a voice and/or video call initiated by an 8x8 subscriber) are sent to one of our partner telecommunications carriers, where the call is transferred to the PSTN and directed to a regular telephone anywhere in the world. Our billing and back office systems manage and enroll customers and bill calls as they originate and terminate on the service.

Network Operations Center

We maintain a network operations center at our headquarters in San Jose, California and employ a staff of approximately 50 individuals with experience in voice and data operations to provide 24-hour operations support, 7 days per week. We use various tools to monitor and manage all elements of our network and our partners' networks in real-time. We also monitor the network elements of some of our larger business customers. Additionally, our network operations center provides technical support to troubleshoot equipment and network problems. We also rely upon the network operations centers and resources of our telecommunications carrier partners to augment our monitoring and

response efforts.

Customer and Technical Support

We maintain a call center at our headquarters in San Jose, California and have a staff of more than 100 employees and contractors that provide customer service and technical support to customers. In addition, we have outsourced some customer support activities to third parties. Customers who access our services directly through our web site receive customer service and technical support through multilingual telephone communication, web-based and "chat" sessions, and e-mail support.

Interconnection Agreements

We are a party to telecommunications interconnect and service agreements with VoIP providers and PSTN telecommunications carriers, such as Level(3) Communications, Verizon Communications and Inteliquent. Pursuant to these agreements, VoIP calls originating on our network can be terminated on other VoIP networks or the PSTN. Correspondingly, calls originating on other VoIP networks and the PSTN can be terminated on our network. While we believe that relations with these providers and carriers are good, we have no assurance that these partners will be able or willing to supply services to us in the future.

Research and Development

The VoIP market is characterized by rapid technological changes and advancements. Accordingly, we make substantial investments in the design and development of new products and services, as well as the development of enhancements and features to our existing 8x8 products and services. Future development also will focus on the use and interoperability of our products and services with emerging audio and video telephony standards and protocols, quality and performance enhancements to multimedia compression algorithms, support of new customer premise equipment, new unified services and the enhancement of existing products and services that are essential to our success.

We currently employ approximately 50 individuals in research, development and engineering activities in our facilities in San Jose, California as well as outsourced software development consultants. Research and development expenses in each of the fiscal years ended March 31, 2013, 2012 and 2011 were \$8.1 million, \$6.7 million and \$4.8 million, respectively.

Regulatory

Although several regulatory proceedings are underway or are being contemplated by federal and state authorities, including the Federal Communications Commission ("FCC") and state regulatory agencies, VoIP communication services, like ours, have been subject to less regulation at the state and federal levels than traditional telecommunications services. Providers of traditional telecommunications services are subject to the highest degree of regulation, while providers of information services are largely exempt from most federal and state regulations governing traditional common carriers. The FCC has subjected VoIP service providers to a smaller subset of regulations that apply to traditional telecommunications service providers and have not yet classified VoIP services as either telecommunications or information. The FCC is currently examining the status of VoIP service providers and the services they provide in multiple open proceedings.

The effect of any future laws, regulations and orders on our operations, including, but not limited to, the 8x8 service, cannot be determined. But as a general matter, increased regulation and the imposition of additional funding obligations increases service costs that may or may not be recoverable from our customers, which could result in making our services less competitive with traditional telecommunications services if we increase our retail prices or decreasing our profit margins if we attempt to absorb such costs.

Regulation of the Internet

In addition to regulations addressing Internet telephony and broadband services, other regulatory issues relating to the Internet, in general, could affect our ability to provide our services. Congress has adopted legislation that regulates certain aspects of the Internet including online content, user privacy, taxation, liability for third party activities and jurisdiction. In addition, a number of initiatives pending in Congress and state legislatures would prohibit or restrict advertising or sale of certain products and services on the Internet, which may have the effect of raising the cost of

doing business on the Internet generally.

Federal, state, local and foreign governmental organizations are considering other legislative and regulatory proposals that would regulate and/or tax applications running over the Internet. We cannot predict whether new taxes will be imposed on our services, and depending on the type of taxes imposed, whether and how our services would be affected thereafter. Increased regulation of the Internet may decrease its growth and hinder technological development, which may negatively impact the cost of doing business via the Internet or otherwise materially adversely affect our business, financial condition and results of operations. Please refer to Part I, Item 1A. "Risk Factors" for a discussion of regulatory risks, proceedings and issues that could adversely affect our business and operating results in the future.

Intellectual Property and Proprietary Rights

Our ability to compete depends, in part, on our ability to obtain and enforce intellectual property protection for our technology in the United States and internationally. We currently rely primarily on a combination of trade secrets, patents, copyrights, trademarks and licenses to protect our intellectual property. As of March 31, 2013, we have been awarded 86 United States patents and additional United States and foreign patent applications are pending. Our patents expire on dates ranging from 2013 to 2031. We cannot predict whether our pending patent applications will result in issued patents.

To protect our trade secrets and other proprietary information, we require our employees to sign agreements providing for the maintenance of confidentiality and also the assignment of rights to inventions made by them while in our employ. There can be no assurance that our means of protecting our proprietary rights in the United States or abroad will be adequate or that competition will not independently develop technologies that are similar or superior to our technology, duplicate our technology or design around any of our patents. In addition, the laws of foreign countries in which our products are or may be sold do not protect our intellectual property rights to the same extent as do the laws of the United States. Our failure to protect our proprietary information could cause our business and operating results to suffer.

We are also subject to the risks of adverse claims and litigation alleging infringement of the intellectual property rights of others. Such claims and litigation could require us to expend substantial resources and distract key employees from their normal duties, which could have a material adverse effect on our operating results, cash flows and financial condition. The communications and software industries are subject to frequent litigation regarding patent and other intellectual property rights. Moreover, the VoIP service provider community has historically been a target of patent holders. There is a risk that we will be a target of assertions of patent rights and that we may be required to expend significant resources to investigate and defend against such assertions of patent rights. For information about specific claims, please refer to Part I, Item 1A, Risk Factors - "Our infringement of a third party's proprietary technology could disrupt our business" and Part I, Item 3. "LEGAL PROCEEDINGS."

We rely upon certain technology, including hardware and software, licensed from third parties. These licenses are on standard commercial terms made generally available by the companies providing the licenses. To date, the cost and terms of these licenses individually has not been material to our business. There can be no assurance that the technology licensed by us will continue to provide competitive features and functionality or that licenses for technology currently utilized by us or other technology which we may seek to license in the future will be available to us on commercially reasonable terms or at all, however. The loss of, or inability to maintain, existing licenses could result in shipment delays or reductions until equivalent technology or suitable alternative products could be developed, identified, licensed and integrated, and could harm our business.

Geographic Areas

Most of our customers and substantially all of our revenues are in the U.S. Revenue from customers outside the United States was not material for the fiscal years ended March 31, 2013, 2012 and 2011.

Employees

As of March 31, 2013, our workforce consisted of 357 employees. None of our employees are represented by a labor union or are subject to a collective bargaining arrangement.

Executive Officers of the Registrant

Edgar Filing: 8X8 INC /DE/ - Form 10-K

Our executive officers as of the date of this report are listed below.

Bryan R. Martin, Chairman and Chief Executive Officer.

Bryan R. Martin, age 45, has served as Chairman of the Board of Directors since December 2003 and as Chief Executive Officer and as a director since February 2002. From March 2007 to November 2008, and again from April 2011 to December 2011, he has served as President. From February 2001 to February 2002, he served as our President and Chief Operating Officer. He served as our Senior Vice President, Engineering Operations from July 2000 to February 2001 and as Chief Technical Officer from August 1995 to August 2000. He also served as a director of the Company from January 1998 through July 1999. In addition, Mr. Martin served in various technical roles for the Company from April 1990 to August 1995. He received a B.S. and an M.S. in Electrical Engineering from Stanford University.

Dan Weirich, Chief Financial Officer. Dan Weirich, age 39, has served as our Chief Financial Officer since July 2006. From November 2008 to March 2011, Mr. Weirich also served as our President. From June 2006 to July 2006, Mr. Weirich served as our Acting Chief Financial Officer. He was our Vice President of Operations from April 2006 to June 2006 and Director of Strategic Sales from March 2004 to April 2006. Prior to joining us, Mr. Weirich served in various roles for iAsiaWorks, Qwest Communications and Phoenix Network. He received a B.S. in International Business from the University of Colorado at Boulder.

Kim Niederman, President.

Kim Niederman, age 61, has served as our President since January 2012. From February 2011 to December 2011, Mr. Niederman served as our Senior Vice President of Sales. From February to November 2010, Mr. Niederman was Senior Vice President of NComputing, Inc. and from January 2007 to January 2009, Mr. Niederman was Chief Executive Officer and President of Anagran, Inc. From January 2003 to January 2007, Mr. Niederman was Senior Vice President of Worldwide Sales for Polycom, Inc. He received a B.A. from the University of Denver.

Debbie Jo Severin, Chief Marketing Officer and Vice President of Marketing.

Debbie Jo Severin, age 53, has served as our Chief Marketing Officer and Vice President of Marketing since March 2009. From 2003 to March 2009, Ms. Severin served as Vice President of Marketing for Covad Communications. Prior to Covad Communications, Ms. Severin worked at PrimeOne Tele-TV, Northpoint Communications, Valiant Networks, BellSouth Telecommunications and Pacific Bell. She received a Masters Degree in Mathematics and a Bachelor of Science from the University of Alabama, Birmingham.

Huw Rees, Vice President of Business Development.

Huw Rees, age 52, has served as Vice President of Business Development since November 2008. From January 2001 to November 2008, Mr. Rees served as our Vice President, Sales and Marketing. He served as the Chairman and Chief Executive Officer of the Company's wholly owned subsidiary, Centile, Inc., from July 2001 until September 2003. Additionally, he served as Vice President, Sales and Business Development of Centile from March 2001 to July 2001. He served as Vice President, Sales of the Solutions Group of the Company from August 2000 until February 2001 and as Director, North American Sales of the Company from April 1999 to August 2000. He previously worked at Mitel Corporation as Sales Manager of the Western Region and also in sales management roles at GEC Plessey Inc. and Marconi PLC. He received a B.Sc. (Hons) from the University of Manchester, Institute of Science and Technology in Electrical and Electronic Engineering and a M.B.A. from the University of LaVerne.

ITEM 1A. RISK FACTORS

If any of the following risks actually occur, our business, results of operations and financial condition could suffer significantly.

Intense competition in the markets in which we compete could prevent us from increasing or sustaining our revenue and increasing or maintaining profitability.

The telecommunications industry is highly competitive. We face intense competition from traditional telephone companies, wireless companies, cable companies, competitive local exchange carriers, alternative voice communication providers and independent VoIP providers. In addition, our customers are not subject to long-term contractual commitments to purchase our services and can terminate our service and switch to competitors' offerings on short notice.

Most of our current and potential competitors, particularly incumbent telephone and cable companies, have longer operating histories, significantly greater resources and name recognition, and a larger base of customers than we have. As a result, these competitors may have greater credibility with our existing and potential customers. They also may be able to adopt more aggressive pricing policies and devote greater resources to the development, promotion and sale of their products than we can to ours. Our competitors may also offer bundled service arrangements offering a more complete product despite the technical merits or advantages of our products. Competition could decrease our prices, reduce our sales, lower our gross profits or decrease our market share.

We also compete against established alternative voice communication providers and face competition from other large, well-capitalized Internet companies that have recently launched or plan to launch VoIP-enabled services. In addition, we compete with independent VoIP service providers. Some of these service providers may choose to sacrifice revenue in order to gain market share by offering their services at lower prices or for free. In order to compete with such service providers, we may have to significantly reduce our prices, which would affect our profitability.

We also are subject to the risk that new technologies may be developed that are able to deliver competing voice services at lower prices, better or more conveniently. Future competition from new technologies could have a material adverse effect on our growth and operating results.

Given the significant price competition in the markets for our products, we are at a significant disadvantage compared to many of our competitors, especially those with substantially greater resources, and therefore may be better able to withstand an extended period of downward pricing pressure. The adverse impact of a shortfall in our revenues may be magnified by our inability to adjust spending to compensate for such shortfall. Announcements of new products and technologies by our competitors or us could cause customers to defer purchases of our existing products, which also could have a material adverse effect on our business, financial condition or operating results.

The success of our Company is dependent on the growth and public acceptance of our services.

Our future success depends on our ability to significantly increase revenues generated from our services. In turn, the success of our voice and video communications services depends, among other things, upon future demand for VoIP telephony systems and services. Because the use of our service requires that the user be a subscriber of an existing broadband Internet service, usually provided through a cable or digital subscriber line, or DSL, connection, slow or limited adoption of broadband Internet service could adversely affect the growth of our subscriber base and revenues. Although the number of broadband subscribers worldwide has grown significantly over the last five years, VoIP service has not yet been adopted by a majority of prospective business customers. According to a report filed by the FCC in January 2013, as of December 31, 2011, approximately 9.5% of access lines to businesses in the United States utilize interconnected VoIP services. To increase the deployment of broadband Internet services from broadband Internet service providers, telephone companies and cable companies must continue to invest in the deployment of high speed broadband networks to residential and business customers, over which we have no control. In addition, VoIP networks must improve quality of service for real-time communications, managing effects such as packet jitter, packet loss, and unreliable bandwidth, so that toll-quality service can be consistently provided. VoIP telephony equipment and services must achieve a similar level of reliability that users of the PSTN have come to expect from their telephone service, and the cost and feature benefits of VoIP must be sufficient to cause customers to switch away from traditional telephony service providers. We must devote substantial resources to educate customers and end users about the benefits of VoIP telephony solutions, in general, and our services in particular. Substantial, ongoing interaction with our customers in order to train and assist them with the deployment and use of our services over these networks is sometimes required. If any or all of these factors fail to occur, our business may be affected adversely.

The impact of the current economic climate and adverse credit markets may impact customer demand for our products and services.

Many of our existing and target customers are in the small and medium business sector. Although we believe our products and services are less costly than traditional telephone services, these businesses may be more likely to be significantly affected by economic downturns than larger, more established businesses. They also may be more likely to require working capital financing from local and regional banks whose lending activities have been reduced substantially since 2008, as a result of which the existing and target customers may lack the funds necessary to add new equipment and services such as ours. Additionally, these customers often have limited discretionary funds which they may choose to spend on items other than our products and services. If small and medium businesses continue to experience economic hardship, this could negatively affect the overall demand for our products and services, delay and lengthen sales cycles and lead to slower growth or even a decline in our revenue, net income and cash flows.

Although the majority of our billing arrangements with customers are prepaid, we regularly monitor the percentage of customers who cease to pay for our services due to closing or downsizing their business. In general, our customers may terminate their subscriptions for our services on 30 days notice. Even though our customer churn rates improved in fiscal 2013, we believe that more than 50% of our total customer churn is related to customers' financial condition and cannot be certain that we will continue to experience the same improvement in churn rates given current economic

conditions. Additionally, the combination of our sales cycle coupled with challenging economic conditions could have a negative impact on the results of our operations.

We have a history of losses and are uncertain of our future profitability.

We recorded operating income of approximately \$23.6 million for the fiscal year ended March 31, 2013 and ended the period with an accumulated deficit of \$109 million. We recorded operating income of approximately \$7.2 million and \$6.2 million for the fiscal years ended March 31, 2012 and 2011, respectively. Although we have achieved operating income in each of our four most recent fiscal years, we suffered operating losses in each of the three prior fiscal years and may incur operating losses in the foreseeable future, which may be substantial. As we expand our geographic reach and service offerings, and further invest in R&D, we will need to increase revenues in order to generate sustainable operating profit. Given our history of fluctuating revenues and operating losses, we cannot be certain that we will be able to maintain operating profitability on an annual basis or on a quarterly basis in the future.

Our business depends on continued, unimpeded access to the Internet by us and our users, but Internet access providers and Internet backbone providers may be able to block, degrade or charge for access to or bandwidth use of certain of our products and services, which could lead to additional expenses and the loss of users.

Our products and services depend on the ability of our users to access the Internet, and certain of our products require significant bandwidth to work effectively. Currently, this access is provided by companies that have significant and increasing market power in the broadband and Internet access marketplace, including incumbent telephone companies, cable companies and mobile communications companies. Some of these providers offer products and services that directly compete with our own offerings, which give them a significant competitive advantage. Some of these providers have stated that they may take measures that could degrade, disrupt or increase the cost of user access to certain of our products by restricting or prohibiting the use of their infrastructure to support or facilitate our offerings, or by charging increased fees to us or our users to provide our offerings, while others, including some of the largest providers of broadband Internet access services, have committed to not engaging in such behavior.

On December 23, 2010, the FCC adopted an order that imposes "network neutrality" obligations on providers of fixed and wireless broadband Internet access services, with wireless providers subject to a more limited set of rules. Among other things, the rules: (1) require providers of consumer broadband Internet access to publicly disclose their network management practices and the performance and commercial terms of their broadband Internet access services; (2) prevent broadband Internet access providers from blocking lawful content, applications, services, or non-harmful devices, subject to reasonable network management; and (3) prevent broadband Internet access providers from unreasonably discriminating in the transmission of lawful network traffic over a consumer's broadband Internet access service. The FCC rules became effective on November 20, 2011. Numerous parties have appealed these rules which have been consolidated before the U.S. Court of Appeals for the District of Columbia. We cannot predict the outcome of these appeals or the impact of these rules on our business at this time. Although we believe interference with access to our products and services is unlikely, broadband Internet access provider interference has occurred, in limited circumstances in the U.S., and could result in a loss of existing users and increased costs, and could impair our ability to attract new users, thereby negatively impacting our revenue and growth.

The VoIP telephony market is subject to rapid technological change, and we depend on new product and service introductions in order to maintain and grow our business.

VoIP telephony is an emerging market that is characterized by rapid changes in customer requirements, frequent introductions of new and enhanced products, and continuing and rapid technological advancement. To compete successfully in this emerging market, we must continue to design, develop, manufacture, and sell new and enhanced VoIP telephony software products and services that provide increasingly higher levels of performance and reliability at lower cost.

Decreasing telecommunications rates and increasing regulatory charges may diminish or eliminate our competitive pricing advantage.

Decreasing telecommunications rates may diminish or eliminate the competitive pricing advantage of our services, while increased regulation and the imposition of additional regulatory funding obligations at the federal, state and local level could require us to either increase the retail price for our services, thus making us less competitive, or absorb such costs, thus decreasing our profit margins. International and domestic telecommunications rates have decreased significantly over the last few years in most of the markets in which we operate, and we anticipate these rates will continue to decline in all of the markets in which we do business or expect to do business. Users who select our services to take advantage of the current pricing differential between traditional telecommunications rates and our rates may switch to traditional telecommunications carriers if such pricing differentials diminish or disappear, however, and we will be unable to use such pricing differentials to

attract new customers in the future. Continued rate decreases would require us to lower our rates to remain competitive and would reduce or possibly eliminate any gross profit from our services. In addition, we may lose subscribers for our services.

Reform of federal and state Universal Service Fund programs could increase the cost of our service to our customers diminishing or eliminating our pricing advantage.

The FCC and a number of states are considering reform or other modifications to Universal Service Fund programs. The way we calculate our contribution may change if the FCC or certain states engage in reform or adopt other modifications. In April, 2012, the FCC released a Further Notice of Proposed Rulemaking to consider reforms to the manner in which companies, like us, contribute to the federal Universal Service Fund program. In general, the Further Notice of Proposed Rulemaking is considering questions like: what companies should contribute, how contributions should be assessed, and methods to improve the administration of the system. We cannot predict the outcome of this proceeding nor its impact on our business at this time.

Should the FCC or certain states adopt new contribution mechanisms or otherwise modify contribution obligations that increase our contribution burden, we will either need to raise the amount we currently collect from our customers to cover this obligation or absorb the costs, which would reduce our profit margins. Furthermore, the FCC has ruled that states can require us to contribute to state Universal Service Fund programs. A number of states already require us to contribute, while others are actively considering extending their programs to include the services we provide. We currently pass-through Universal Service Fund contributions to our customers which may result in our services becoming less competitive as compared to those provided by others.

We may become subject to state regulation for certain service offerings.

Certain states take the position that offerings by VoIP companies, like us, are intrastate and therefore subject to state regulation. These states argue that if the beginning and end points of communications are known, and if some of these communications occur entirely within the boundaries of a state, the state can regulate that offering. We believe that the FCC has preempted states from regulating VoIP offerings like ours in the same manner as providers of traditional telecommunications services. We cannot predict how this issue will be resolved or its impact on our business at this time.

We rely on third party network service providers to originate and terminate substantially all of our public switched telephone network calls.

We leverage the infrastructure of third party network service providers to provide telephone numbers, PSTN call termination and origination services, and local number portability for our customers rather than deploying our own network throughout the United States. This decision has resulted in lower capital and operating costs for our business in the short term but has reduced our operating flexibility and ability to make timely service changes. If any of these network service providers cease operations or otherwise terminate the services that we depend on, the delay in switching our technology to another network service provider, if available, and qualifying this new service could have a material adverse effect on our business, financial condition or operating results.

While we believe that relations with our current service providers are good, and we have contracts in place, there can be no assurance that these service providers will be able or willing to supply cost-effective services to us in the future or that we will be successful in signing up alternative or additional providers. Although we could replace our current providers, if necessary, our ability to provide service to our subscribers could be impacted during this timeframe, and this could have an adverse effect on our business, financial condition or results of operations. The loss of access to, or requirement to change, the telephone numbers we provide to our customers also could have a material adverse effect on our business, financial condition or operating results.

Due to our reliance on these service providers, when problems occur in a network, it may be difficult to identify the source of the problem. The occurrence of hardware and software errors, whether caused by our 8x8 service or another vendor's products, may result in the delay or loss of market acceptance of our products and any necessary revisions may force us to incur significant expenses. The occurrence of some of these types of problems may seriously harm our business, financial condition or operating results.

Our physical infrastructure is concentrated in a few facilities and any failure in our physical infrastructure or services could lead to significant costs and disruptions and could reduce our revenue, harm our business reputation and have a material adverse effect on our financial results.

Our leased network and data centers are subject to various points of failure. Problems with cooling equipment, generators, uninterruptible power supply, routers, switches, or other equipment, whether or not within our control, could result in service interruptions for our customers as well as equipment damage. Because our services do not require geographic proximity of our data centers to our customers, our infrastructure is consolidated into a few large facilities. Any failure or downtime in one of our data center facilities could affect a significant percentage of our customers. The total destruction or severe impairment of any of our data center facilities could result in significant downtime of our services and the loss of customer data. Because our ability to attract and retain customers depends on our ability to provide customers with highly reliable service, even minor interruptions in our service could harm our reputation. Additionally, in connection with the expansion or consolidation of our existing data center facilities from time to time, there is an increased risk that service interruptions may occur as a result of server relocation or other unforeseen construction-related issues.

We have experienced interruptions in service in the past. While we have not experienced a material increase in customer attrition following these events, the harm to our reputation is difficult to assess. We have taken and continue to take steps to improve our infrastructure to prevent service interruptions, including upgrading our electrical and mechanical infrastructure. However, service interruptions continue to be a significant risk for us and could materially impact our business.

Any future service interruptions could:

- Cause our customers to seek damages for losses incurred;
- Require us to replace existing equipment or add redundant facilities;
- Affect our reputation as a reliable provider of hosting services;
- Cause existing customers to cancel or elect to not renew their contracts; or
- Make it more difficult for us to attract new customers.

Any of these events could materially increase our expenses or reduce our revenue, which would have a material adverse effect on our operating results.

Increased energy costs, power outages, and limited availability of electrical resources may adversely affect our operating results.

Our data centers are susceptible to increased costs of power and to electrical power outages. Our customer contracts do not contain provisions that would allow us to pass on any increased costs of energy to our customers, which could affect our operating margins. Any increases in the price of our services to recoup these costs could not be implemented until the end of a customer contract term. Further, power requirements at our data centers are increasing as a result of the increasing power demands of today's servers. Increases in our power costs could impact our operating results and financial condition. Since we rely on third parties to provide our data centers with power sufficient to meet our needs, our data centers could have a limited or inadequate amount of electrical resources necessary to meet our customer requirements. We attempt to limit exposure to system downtime due to power outages by using backup generators and power supplies. However, these protections may not limit our exposure to power shortages or outages entirely. Any system downtime resulting from insufficient power resources or power outages could damage our reputation and lead us to lose current and potential customers, which would harm our operating results and financial condition.

Increased Internet bandwidth costs and network failures may adversely affect our operating results.

Our success depends in part upon the capacity, reliability, and performance of our network infrastructure, including the capacity leased from our Internet bandwidth suppliers. We depend on these companies to provide uninterrupted and error-free service through their telecommunications networks. Some of these providers are also our competitors. We exercise little control over these providers, which increases our vulnerability to problems with the services they provide. We have experienced and expect to continue to experience interruptions or delays in network service. Any failure on our part or the part of our third party suppliers to achieve or maintain high data transmission capacity, reliability or performance could significantly reduce customer demand for our services and damage our business.

As our customer base grows and their usage of telecommunications capacity increases, we will be required to make additional investments in our capacity to maintain adequate data transmission speeds, the availability of which may be limited or the cost of which may be on terms unacceptable to us. If adequate capacity is not available to us as our customers' usage increases, our network may be unable to achieve or maintain sufficiently high data transmission capacity, reliability or performance. In addition, our business would suffer if our network suppliers increased the prices for their services and we were unable to pass along the increased costs to our customers.

We depend on contract manufacturers to manufacture substantially all of our products and third party vendors for IP phones, and any delay or interruption in manufacturing by these contract manufacturers or vendors would result in delayed or reduced shipments to our customers and may harm our business.

We do not have long-term purchase agreements with our contract manufacturers and we depend on a concentrated group of contract manufacturers for a substantial portion of manufacturing our products. There can be no assurance that our contract manufacturers will be able or willing to reliably manufacture our products, in volumes, on a cost-effective basis or in a timely manner. If we cannot compete effectively for the business of these contract manufacturers, or if any of the contract manufacturers experience financial or other difficulties in their businesses, our revenue and our business could be adversely affected. In particular, if one of our contract manufacturers becomes subject to bankruptcy proceedings, we may not be able to obtain any of our products held by the contract manufacturer.

We also rely on third party vendors for IP phones to utilize our service. We currently do not have long-term supply contracts with any of these vendors. As a result, most of these third party vendors are not obligated to provide products or services to us for any specific period, in any specific quantities or at any specific price, except as may be provided in a particular purchase order. The inability of these third party vendors to deliver IP phones of acceptable quality and in a timely manner, particularly the sole source vendors, could adversely affect our operating results or cause them to fluctuate more than anticipated. Additionally, some of our products may require specialized or high-performance component parts that may not be available in quantities or in time frames that meet our requirements.

Our infringement of a third party's proprietary technology could disrupt our business.

There has been substantial litigation in the communications, VoIP services, semiconductor, electronics, and related industries regarding intellectual property rights and, from time to time, third parties may claim infringement by us of their intellectual property rights. Our broad range of current and former technology, including IP telephony systems, digital and analog circuits, software, and semiconductors, increases the likelihood that third parties may claim infringement by us of their intellectual property rights. For example, on May 2, 2008, we received a letter from AT&T Intellectual Property, L.L.C. ("AT&T IP") expressing the belief that we must license a specified patent for use in our 8x8 broadband telephone service, as well as suggesting that we obtain a license to its portfolio of MPEG-4 patents for use with our video telephone products and services. At the same time, we began an evaluation of whether AT&T IP's affiliated entities may need to license any of our patents or other intellectual property. We have continued to engage in discussions with AT&T IP to explore a mutually agreeable resolution of the parties' respective assertions regarding these intellectual property issues. We are unable at this time to state whether we will enter into any license or cross-license agreements with AT&T IP or whether we ultimately anticipate any material effects on our operating results or financial condition as a consequence of these matters.

Certain technology necessary for us to provide our services may, in fact, be patented by other parties either now or in the future. If such technology were held under patent by another person, we would have to negotiate a license for the use of that certain technology. We may not be able to negotiate such a license at a price that is acceptable. The existence of such a patent, or our inability to negotiate a license for any such technology on acceptable terms, could force us to cease using such technology and offering products and services incorporating such technology.

We have recently been named as defendants in several patent infringement lawsuits. For example:

- On February 22, 2011, we were named a defendant in a lawsuit, Bear Creek Technologies, Inc. v. 8x8, Inc. et al., along with 20 other defendants.
- On October 25, 2011, we were named a defendant in a lawsuit, Klausner Technologies, Inc. v. Oracle Corporation et al., along with 30 other defendants.

If we were found to be infringing on the intellectual property rights of any third party in these lawsuits or other claims and proceedings that may be asserted against us in the future, we could be subject to liabilities for such infringement, which could be material. We could also be required to refrain from using, manufacturing or selling certain products or using certain processes, either of which could have a material adverse effect on our business and operating results. From time to time, we have received, and may continue to receive in the future, notices of claims of infringement, misappropriation or misuse of other parties' proprietary rights. There can be no assurance that we will prevail in these discussions and actions or that other actions alleging infringement by us of third party patents will not be asserted or prosecuted against us. Furthermore, lawsuits like these may require significant time and expense to defend, may divert management's attention away from other aspects of our operations and, upon resolution, may have a material adverse effect on our business, results of operations, financial condition and cash flows. More information regarding the two pending suits is provided below under Part I, Item 3. "LEGAL PROCEEDINGS."

We license technology from third parties that we do not control and cannot be assured of retaining.

We rely upon certain technology, including hardware and software, licensed from third parties. There can be no assurance that the technology licensed by us will continue to provide competitive features and functionality or that licenses for technology currently utilized by us or other technology which we may seek to license in the future, will be available to us on commercially reasonable terms or at all. The loss of, or inability to maintain, existing licenses could result in shipment delays or reductions until equivalent technology or suitable alternative products could be developed, identified, licensed and integrated, and could harm our business. These licenses are on standard commercial terms made generally available by the companies providing the licenses. The cost and terms of these licenses individually are not material to our business.

Inability to protect our proprietary technology would disrupt our business.

We rely, in part, on trademark, copyright, and trade secret law to protect our intellectual property in the United States and abroad. We seek to protect our software, documentation, and other written materials under trade secret and copyright law, which afford only limited protection. We also rely, in part, on patent law to protect our intellectual property in the United States and internationally. As of March 31, 2013, we had been awarded 86 United States patents and have additional United States and foreign patent applications pending. We cannot predict whether such pending patent applications will result in issued patents that effectively protect our intellectual property. We may not be able to protect our proprietary rights in the United States or internationally (where effective intellectual property protection may be unavailable or limited), and competitors may independently develop technologies that are similar or superior to our technology, duplicate our technology or design around any patent of ours. We have, in the past, licensed and, in the future, expect to continue licensing our technology to others, many of whom are located or may be located abroad. There are no assurances that such licensees will protect our technology from misappropriation. Moreover, litigation may be necessary in the future to enforce our intellectual property rights, to determine the validity and scope of the proprietary rights of others, or to defend against claims of infringement or invalidity. Such litigation could result in substantial costs and diversion of management time and resources and could have a material adverse effect on our business, financial condition, and operating results. Any settlement or adverse determination in such litigation would also subject us to significant liability.

Our products must comply with industry standards, FCC regulations, state, local, country-specific and international regulations, and changes may require us to modify existing products and/or services.

In addition to reliability and quality standards, the market acceptance of telephony over broadband IP networks is dependent upon the adoption of industry standards so that products from multiple manufacturers are able to communicate with each other. Our VoIP telephony products rely heavily on communication standards such as SIP, MGCP and network standards such as TCP/IP and UDP to interoperate with other vendors' equipment. There is currently a lack of agreement among industry leaders about which standard should be used for a particular application, and about the definition of the standards themselves. These standards, as well as audio and video compression

standards, continue to evolve. We also must comply with certain rules and regulations of the FCC regarding electromagnetic radiation and safety standards established by Underwriters Laboratories, as well as similar regulations and standards applicable in other countries. Standards are frequently modified or replaced. As standards evolve, we may be required to modify our existing products or develop and support new versions of our products. We must comply with certain federal, state and local requirements regarding how we interact with our customers, including marketing practices, consumer protection, privacy, and billing issues, the provision of 9-1-1 emergency service and the quality of service we provide to our customers. The failure of our products and services to comply, or delays in compliance, with various existing and evolving standards could delay or interrupt volume production of our VoIP telephony products, subject us

to fines or other imposed penalties, or harm the perception and adoption rates of our service, any of which would have a material adverse effect on our business, financial condition or operating results.

Our ability to offer services outside the U.S. is subject to different local regulatory environments, which may be unknown, complicated and uncertain.

Regulatory treatment of VoIP telephony outside the United States varies from country to country and often the laws are unclear. In January 2013, we launched our Virtual Office services in Canada. We currently distribute our products and services directly to consumers and through resellers that may be subject to telecommunications regulations in their home countries. The failure by us or our customers and resellers to comply with these laws and regulations could reduce our revenue and profitability. Because of our relationship with the resellers, some countries may assert that we are required to register as a telecommunications provider in that country. In such case, our failure to do so could subject us to fines or penalties. In addition, some countries are considering subjecting VoIP services to the regulations applied to traditional telephone companies. Regulatory developments such as these could have a material adverse effect on the use of our services in international locations.

As we expand our operations internationally, we expect to become subject to additional government regulations. Such regulations include, but are not limited to: licensing obligations, emergency services obligations, data retention and transfer laws and regulations, privacy laws and regulations, consumer protection, national security laws and regulations, law enforcement obligations, financial reporting, surcharge and other fees that must be collected and remitted as well as other laws and regulations. In some cases, the relevant laws may be uncertain or unsettled complicating our ability to comply and may subject us to fines, penalties or other enforcement actions. It is possible that we could be subject to civil and criminal liabilities that may damage our business reputation and brand. Moreover, any changes in laws, regulations or enforcement policies may expose us to unknown civil and criminal risks that could require us to modify our offerings or expose us to fines, penalties or other enforcement actions, or compel us to require with onerous obligations that we either were not previously subject or did not foresee. We may be required to exit certain foreign markets should such changes make the provision of our service unprofitable, too costly, too risky or for other reasons that could adversely impact our profitability, or our ability to compete effectively with other service providers. Any of these occurrences could negatively impact our brand and our business reputation.

We will also become subject to risks associated with changes in the regulatory structure of the telecommunications services marketplace in international markets. As in the United States, we will continue to depend on underlying carriers to terminate our traffic to the PSTN in each country where we offer services. As countries evaluate and change intercarrier payment schemes, remove and impose new obligations, our costs to provide service may increase. This could require us either to reduce our profitability or raise the retail price of our service which may make our offerings less competitive with other providers in the marketplace. We may have to exit markets that we previously thought would be profitable which could negatively impact our business, and damage our brand and reputation.

Acquisitions may divert our management's attention, result in dilution to our stockholders and consume resources that are necessary to sustain our business.

In fiscal 2012, we made two business acquisitions. In fiscal 2011, we made one acquisition and one investment in another company and, if appropriate opportunities present themselves, we may make additional acquisitions or investments or enter into joint ventures or strategic alliances with other companies. Risks commonly encountered in such transactions include:

- The difficulty of assimilating the operations and personnel of the combined companies;
- The risk that we may not be able to integrate the acquired services or technologies with our current services, products, and technologies;
- The potential disruption of our ongoing business;
- The diversion of management attention from our existing business;

Edgar Filing: 8X8 INC /DE/ - Form 10-K

- The inability of management to maximize our financial and strategic position through the successful integration of the acquired businesses;
- Difficulty in maintaining controls, procedures, and policies;
- The impairment of relationships with employees, suppliers, and customers as a result of any integration;
- The loss of an acquired base of customers and accompanying revenue;
- The assumption of leased facilities, other long-term commitments or liabilities that could have a material adverse impact on our profitability and cash flow; and

- The dilution to our existing stockholders from the issuance of additional shares of common stock or reduction of earnings per outstanding share in connection with an acquisition that fails to increase the value of our company.

As a result of these potential problems and risks, businesses that we may acquire or invest in may not produce the revenue, earnings, or business synergies that we anticipated. In addition, there can be no assurance that any potential transaction will be successfully identified and completed or that, if completed, the acquired business or investment will generate sufficient revenue to offset the associated costs or other potential harmful effects on our business.

Increased taxes on our service will increase our customers' cost of using our service and/or reduce our profit margins (to the extent the costs are not passed through to our customers) and we may be subject to liabilities for past sales and additional taxes, surcharges and fees.

Until 2007, we did not collect or remit state or municipal taxes, such as sales, excise, and ad valorem taxes, fees or surcharges on the charges to our customers for our services, except that we have historically complied with the collection of California sales tax and financial contributions to the 9-1-1 system and the federal Universal Service Fund. We have received inquiries or demands from a number of state and municipal taxing agencies seeking payment of taxes, fees or surcharges that are applied to or collected from customers of providers of traditional public switched telephone network services. Although we have consistently maintained that these taxes, fees or surcharges do not apply to our service for a variety of reasons depending on the statute or rule that establishes such obligations, a number of states have changed their statutes as part of streamlined sales tax initiatives and we are now collecting and remitting sales taxes in those states. The collection of these taxes, fees or surcharges will have the effect of decreasing any price advantage we may have over other providers who have historically paid these taxes and fees. Our compliance with these tax initiatives will also make us less competitive with those competitors who choose not to comply with these tax initiatives. Currently, three jurisdictions are conducting sales tax audits of our records. As of March 31, 2013, there has been no change in the status of the assessment. We collect and have accrued for taxes that we believe are required to be remitted. While historically, the amounts that have been remitted have been within established accruals if our ultimate liability exceeds the accrued amount, it could result in significant charges to our earnings.

Our emergency and E-911 calling services are different from those offered by traditional wireline telephone companies and may expose us to significant liability. There may be risks associated with limitations associated with E-911 emergency dialing with the 8x8 service.

Both our emergency calling service and our E-911 calling service are different, in significant respects, from the emergency calling services offered by traditional wireline telephone companies. In each case, the differences may cause significant delays, or even failures, in callers' receipt of the emergency assistance they need.

We are offering E-911 service that is similar to the emergency calling services provided to customers of traditional wireline telephone companies in the same area. For those customers located in an E-911 area, emergency calls are routed directly to an emergency services dispatcher at the PSAP in the area of the customer's registered location. The dispatcher will have automatic access to the customer's telephone number and registered location information. If a customer moves their 8x8 service to a new location, the customer's registered location information must be updated and verified by the customer. Until that takes place, the customer will have to verbally advise the emergency dispatcher of his or her actual location at the time of an emergency 9-1-1 call. This can lead to delays in the delivery of emergency services.

The emergency calls of customers located in areas where we are currently unable to provide E-911 service as described above are supported by a national call center that is run by a third party provider and operates 24 hours per day, seven days per week. These operators still receive the customer's registered service location and phone number automatically, and coordinate connecting the caller to the appropriate PSAP or emergency services provider and providing the customer's registered service location and phone number to those local authorities, which can also delay

the delivery of emergency services. In the event that a customer experiences a broadband or power outage, or if a network failure were to occur, the customer will not be able to reach an emergency services provider using our services.

The FCC may determine that our nomadic emergency calling solution does not satisfy the requirements of its VoIP E-911 order because, in some instances, our nomadic emergency calling solution requires that we route an emergency call to a national emergency call center instead of connecting our customers directly to a local PSAP through a dedicated connection and through the appropriate selective router. The FCC may issue further guidance on compliance requirements in the future that might require us to disconnect those customers not receiving access to emergency services in a manner consistent with the VoIP E-911 order. The effect of such disconnections, monetary penalties, cease and desist orders or other enforcement actions

initiated by the FCC or other agency or task force against us could have a material adverse effect on our business, financial condition or operating results.

Delays our customers may encounter when making emergency services calls and any inability of the answering point to automatically recognize the caller's location or telephone number can result in life threatening consequences. Customers may, in the future, attempt to hold us responsible for any loss, damage, personal injury or death suffered as a result of any failure of our E-911 services. In July 2008, the President signed into law the "New and Emerging Technologies 911 Improvement Act of 2008." The law provides public safety, interconnected VoIP providers and others involved in handling 911 calls the same liability protections when handling 911 calls from interconnected VoIP users as from mobile or wired telephone service users. The applicability of the liability protections to our national call center solution is unclear at the present time. Also, we may be exposed to liability for 911 calls made prior to the adoption of this new law although we are unaware of any such liability.

The FCC may require us to deploy an E-911 service that automatically determines the location of our customers. The adoption of such a requirement could increase our costs that could make our service more expensive, decrease our profit margins, or both.

On June 1, 2007, the FCC released a Notice of Proposed Rulemaking in which it tentatively concluded that all interconnected VoIP service providers that allow customers to use their service in more than one location (nomadic VoIP service providers such as us) must utilize an automatic location technology that meets the same accuracy standards which apply to providers of commercial mobile radio services (mobile phone service providers). In September 2010, the FCC released a Notice of Inquiry again requesting comment on what type of automatic location standards should apply to providers of nomadic VoIP service providers, whether the FCC's rules concerning the delivery of emergency services should be extended beyond providers of interconnected VoIP services, and whether such emergency service obligations should apply to mobile VoIP applications used on smartphones, computers and other devices. In July 2011, the FCC released a Second Further Notice of Proposed Rulemaking, seeking comment on a number of issues including (i) whether to apply the FCC's E-911 rules to "outbound-only" interconnected VoIP services (i.e., services that support placing calls to the PSTN); (ii) whether to adopt rules requiring all interconnected VoIP service to automatically provide location information for emergency calls; and (iii) whether to revise the FCC's definition of interconnected VoIP service to require an "Internet connection" rather than a broadband connection, and to "define connectivity in terms of the ability to connect calls to the United States E.164 telephone numbers rather than the PSTN." Also, the FCC released a Notice of Proposed Rulemaking that sought comment on whether any amendment of the definition of interconnected VoIP service should be limited to E-911 requirements, or should apply other regulatory requirements to these additional services. In September 2011, the FCC released a Notice of Proposed Rulemaking soliciting comment on what role the agency could play in the fostering the development and implementation of newer 911 technologies including, but not limited to, prioritization of 911 traffic triggered by an event such as a natural disaster, long-term implementation of IP-based alternatives for delivering different kinds of media to emergency call takers like video, photographs, and other forms of data, and text-to-911 solutions.

The outcome of these proceedings cannot be determined at this time and we may or may not be able to comply with any such obligations that may be adopted. At present, we currently have no means to automatically identify the physical location of one of our customers on the Internet. The FCC's VoIP E-911 order has increased our cost of doing business and may adversely affect our ability to deliver the 8x8 service to new and existing customers in all geographic regions or to nomadic customers who move to a location where emergency calling services compliant with the FCC's mandates are unavailable. Our compliance with and increased costs due to the FCC's VoIP E-911 order put us at a competitive disadvantage to those VoIP service providers who are either not subject to the requirements or have chosen not to comply with the FCC's mandates. We cannot guarantee that emergency calling service consistent with the VoIP E-911 order will be available to all of our customers, especially those accessing our services from outside of the United States. The FCC's current VoIP E-911 order or follow-on orders or clarifications or their impact on our customers due to service price increases or other factors could have a material adverse effect on our business, financial condition or operating results.

The FCC adopted orders reforming the system of payments between regulated carriers that we partner with to interface with the public switch telephone network. The rates we pay for the services performed by these carriers may increase as a result of the FCC's reform order. As a result, we may increase rates for service, making our offerings less competitive with others in the marketplace, or reduce our profitability.

The FCC reformed the system under which regulated providers of telecommunications services compensate each other for various types of traffic, including VoIP traffic that terminates on the PSTN and applied new call signaling requirements to VoIP and other service providers. The FCC's rules concerning charges for transmission of VoIP traffic could result in an increased cost to terminate the traffic absent specific agreements that provide the appropriate rate to be charged for such traffic when passed between us and other carriers. For VoIP traffic that terminates on the PSTN, the Order establishes a transitional framework that: (1) establishes default intercarrier compensation rates for "toll" VoIP-PSTN traffic that are equal to interstate access rates applicable to non-VoIP traffic; (2) establishes default intercarrier compensation rates for other VoIP-PSTN traffic that will be the applicable reciprocal compensation rates; and (3) allows regulated providers of telecommunications services to tariff these default charges in the relevant federal and state tariffs that apply in the absence of an agreement. The rules then provide for a multiyear transition to a national "bill-and-keep" framework as the ultimate end state for all telecommunications traffic exchanged with a local exchange carrier. Under bill- and-keep, providers do not charge an originating carrier for terminating traffic and instead recover the costs of termination from their own customers. To the extent that the company transmits traffic not subject to a specific intercarrier compensation arrangement and another provider were to assert that the traffic we exchange with them is subject to higher levels of compensation than we, or the third parties terminating our traffic to the PSTN, pay today (if any), our termination costs could initially increase, but ultimately will be reduced as the intercarrier compensation system transitions to a bill-and-keep framework. Accordingly, in the near term, our costs to terminate traffic to the PSTN may increase which could result in either us increasing the retail charges for our service offerings or reducing our profitability. But, over the longer term, we expect our costs to terminate traffic to the PSTN to decline.

Recently, the FCC clarified its intercarrier compensation order with respect to the compensation arrangements for the origination of VoIP traffic. Pursuant to the clarification order, local exchange carriers will be able to tariff default charges, which are charges imposed in the absence of commercial agreements between parties exchanging traffic bound for the PSTN, equal to intrastate originating access for originating intrastate toll VoIP traffic. The order makes clear that VoIP traffic includes traffic that originates or terminates in IP, or both, and also without regard to whether the traffic originates in time-division multiplexing or Internet protocol format. Local exchange carriers will have the ability to tariff default charges for the origination of intrastate toll VoIP traffic at intrastate rates until June 30, 2014. Starting July 1, 2014, local exchange carriers will be permitted to tariff default rates equal to interstate originating access. For all interstate VoIP traffic, interstate access rates continue to apply, consistent with the original order. At this time, we cannot predict what, if any, impact the FCC's clarification order will have on our business.

The FCC's Order reforming payments for carrier exchange services for various type of traffic also imposes call signaling requirements on VoIP providers like us. To the extent that we cannot comply with these rules, we may be subject to fines, cease and desist orders, or other penalties.

The FCC Order reforming the system of compensation for various types of traffic also included rules to address calls for which identifying information is missing or masked in ways that impede billing for such traffic. The FCC's new rules require, among other things, interconnected VoIP providers, like us, that originate interstate or intrastate traffic destined for the PSTN, to transmit the telephone number associated with the calling party to the next provider in the call path. Intermediate providers must pass calling party number or charge number signaling information they receive from other providers unaltered, to subsequent providers in the call path. While we believe we are in compliance with this rule, to the extent that we pass traffic that does not have appropriate calling party number or charge number information, we could be subject to fines, cease and desist orders, or other penalties.

The FCC's Order reforming payments between carriers for various types of traffic also includes a Further Notice of Proposed Rulemaking. Depending on the rules adopted by the FCC in this proceeding, the payments we make to underlying carriers to access the Public Switched Telephone Network may increase, which may result in us increasing the retail price of our service, potentially making our offering less competitive with traditional providers of telecommunications services, or may reduce our profitability.

The FCC's Order reforming payments between carriers for various types of traffic includes a Further Notice of Proposed Rulemaking which may result in the FCC adopting additional rules applicable to the exchange of traffic between regulated providers of telecommunications services. While it is uncertain what rules, if any, the FCC will adopt and when the FCC may do so, it is possible that as a result of this proceeding the charges our underlying service providers assess us will increase when we send traffic to the PSTN. Should this occur, we may have to raise the retail rate of our offering, potentially making our services less competitive with traditional providers of telecommunications services, or our profit margins may decrease. The FCC proceeding is ongoing and we cannot predict whether the FCC will act or what rules it may adopt nor can we predict what impact it may have on our business at this time.

The FCC and Congress are investigating call completion rates to rural areas of the United States. One company made a voluntary contribution of approximately \$1 million to the U.S. Treasury during the course of the FCC's investigation and agreed to implement a compliance plan. The investigations into rural call completion rates remain ongoing. We may become subject to an investigation or an enforcement action.

Although we rely on third party carriers to handle all of our traffic destined for the PSTN, including to rural areas, it is possible that the FCC could focus on our practices and procedures for routing such calls. We are monitoring call completion rates and we are working with our underlying carriers to improve call quality and completion rates throughout our network. It is possible that we, like other providers in the communications marketplace, may be subject to fines or other enforcement actions should the FCC determine that our call completion rates to rural areas are, or have been, unacceptable.

The FCC has proposed a number of rules that would include new reporting obligations. At this time, it remains unclear what rules the FCC will adopt and whether we will be subject to additional reporting obligations. It is possible that as a result of this proceeding, our compliance costs will increase and the charges our underlying service providers assess us may increase. The FCC proceeding is still in its early stages and we cannot predict whether the FCC will act or what rules it may adopt, nor can we predict what impact it may have on our business at this time.

A petition filed by tw telecom inc. with the FCC seeks an Order that its provision of facilities-based interconnected VoIP services should be classified as "telecommunications services," "telephone exchange services," and/or "exchange access" under relevant federal law. We cannot predict the outcome of this proceeding nor its impact on our business at this time.

In July 2011, the FCC released a Public Notice concerning a Petition for Declaratory Ruling filed by tw telecom inc. The Petitioner requests the FCC to clarify that incumbent providers of local telephone service, like AT&T and Verizon, allow for direct IP-to-IP interconnection with incumbent local exchange carriers for certain IP-based services. Specifically, tw telecom seeks direct IP-to-IP interconnection from incumbent local telephone companies for the transmission and routing of tw telecom's facilities-based VoIP services and for voice services that originate and terminate in Time Division Multiplexing format but are converted to IP format for transport (referred to by the industry as "IP-in-the-middle" voice services). Additionally, tw telecom is asking for the FCC to clarify that its facilities-based VoIP services are "telecommunications services" as well as "telephone exchange services" and/or "exchange access," as those terms are defined under the Communications Act of 1934, as amended by the Telecommunications Act of 1996. We cannot predict the outcome of this proceeding nor its potential impact on our business at this time. Depending on how the FCC rules on the tw telecom petition, we could be subject to greater regulation at the state level which would increase our costs of doing business. It is also possible that an adverse ruling by the FCC in this proceeding could change the intercarrier compensation rate that our carriers pay to handle our

traffic which could also increase our costs. Increased costs to us may require us to raise our prices, making our services less competitive, reduce our profit margins, or both.

The FCC may require providers like us to comply with regulations related to how we present bills to customers. The adoption of such obligations may require us to revise our bills and may increase our costs of providing service which could either result in price increases or reduce our profitability.

The FCC released an order with respect to preventing the placement of unauthorized charges on consumers' telephone bills, a practice referred to in the industry as "cramming." While the FCC did not extend regulations applicable to providers of traditional telephone services to interconnected VoIP providers to prevent "cramming" and other "Truth-in-Billing" requirements, the FCC indicated that it would continue to monitor the marketplace and may extend such obligation in the future. The proceeding remains open. We cannot predict the outcome of this proceeding, nor can we predict its potential impact on our business at this time. These events could increase our expenses, which would have an adverse effect on our operating results.

The FCC adopted rules concerning disabilities access requirements that may expand disabilities access requirements to additional services we offer.

In October, 2010, the "Twenty-First Century Communications and Video Accessibility Act" was signed into law. In October, 2011, the FCC adopted an order implementing the new accessibility requirements as well as released a Notice of Proposed Rulemaking concerning certain, additional, discrete issues. We cannot predict whether we will be subject to additional accessibility requirements or whether any of our service offerings that are not currently subject to disabilities access requirements will be subject to such obligations. These events could increase our expenses, which would have an adverse effect on our operating results.

There may be risks associated with our ability to comply with the requirements of federal law enforcement agencies.

The FCC requires all interconnected VoIP providers to comply with the Communications Assistance for Law Enforcement Act ("CALEA"). The FCC allows VoIP providers to comply with CALEA through the use of a solution provided by a trusted third party with the ability to extract call content and call-identifying information from a VoIP provider's network. While the FCC permits companies like us to use the services provided by these third parties to comply with CALEA, we are ultimately responsible for ensuring the timely delivery of call content and call-identifying information to law enforcement, and for protecting subscriber privacy.

We selected a partner to work with us to develop a solution for CALEA compliant lawful interception of communications and, as of May 14, 2007, we had installed this solution in our network operations and data centers, but had not yet completed certification testing of all required intercept capabilities of this equipment. We completed formal CALEA compliance testing with this partner in March 2009 and currently, our tested CALEA solution is fully deployed in our network. However, we could be subject to an enforcement action by the FCC or law enforcement agencies for any delays related to meeting, or if we fail to comply with, any current or future CALEA obligations.

There may be risks associated with our ability to comply with requirements of the Telecommunications Relay Service.

The FCC requires providers of interconnected VoIP services to comply with certain regulations pertaining to people with disabilities and to contribute to the Telecommunications Relay Services, or TRS, fund. We are also required to offer 7-1-1 abbreviated dialing for access to relay services. As of April 5, 2008, we have implemented a 7-1-1 system which routes such calls to the appropriate relay center based upon the customer's assigned telephone number. We may be subject to enforcement actions including, but not limited to, fines, cease and desist orders, or other penalties if the FCC believes we are not compliant with these new disability requirements.

There may be risks associated with our ability to comply with the requirements of federal and other regulations related to Customer Proprietary Network Information ("CPNI").

The FCC requires providers of interconnected VoIP services to comply with its customer proprietary network information, or CPNI, rules. CPNI includes information such as the phone numbers called by a consumer, the frequency, duration, and timing of such calls, and any services/features purchased by the consumer, such as call waiting, call forwarding, and caller ID, in addition to other information that may appear on a consumer's bill.

Under the FCC's rules, companies like us may not use CPNI without customer approval except in narrow circumstances related to the provision of existing services, and must comply with detailed customer approval processes when using CPNI outside of these narrow circumstances. The rules also require more stringent security measures for access to a customer's CPNI data in the form of required passwords for on-line access and call-in access to account information as well as customer notification of account or password changes.

At the present time, we do not utilize our customer's CPNI in a manner which would require us to obtain consent from our customers but, in the event that we do in the future, we will be required to adhere to specific CPNI rules aimed at marketing such services. Before December 8, 2007, we implemented internal processes in order to be in compliance with all of the FCC's CPNI rules. Our failure to achieve compliance with any future CPNI orders, rules, filings or standards, or any enforcement action initiated by the FCC or other agency, state or task force against us could have a material adverse effect on our business, financial condition or operating results.

If we are unable to improve our process for local number portability provisioning, our growth may be negatively affected.

We support local number portability, or LNP, which allows our customers to retain their existing telephone numbers when subscribing to our services. Transferring numbers is a manual process that, in the past, has taken us 20 business days or longer, although we have taken steps to automate this process to reduce the delay. A new customer of our services must maintain both the new 8x8 service and the customer's existing telephone service during the number transfer process. By comparison, transferring wireless telephone numbers among wireless service providers generally takes several hours, and transferring wireline telephone numbers among traditional wireline service providers generally takes a few days. The additional delay that we experience is due to our reliance on third party carriers to transfer the numbers, as well as the delay the existing telephone service provider may contribute to the process. Local number portability is considered an important feature by many potential customers, especially our business customers, and if we fail to reduce related delays, we may experience increased difficulty in acquiring new customers or retaining existing customers. Moreover, the FCC requires interconnected VoIP providers, like us, to comply with industry standard timeframes and a shorter timeframe for certain types of ports. If we are unable to process ports within the requisite timeframes, we could be subject to fines and/or penalties. Additionally, both customers and carriers may seek relief from the relevant state public utility commission, the FCC, and/or in state or federal court.

The rates we pay to underlying telecommunications carriers may increase which may reduce our profitability and increase the retail price of our service.

The FCC has several open proceedings considering new rules that may impact charges that regulated telecommunications carriers assess each other for originating and terminating traffic. It is possible that the FCC will adopt new rules that subjects interconnected VoIP traffic to increased charges. Should this occur, the rates that we pay to our underlying carriers may increase which may reduce our profitability and may also increase the retail price of our service making our service less competitive with other providers of similar calling services. We cannot predict either the timing or the outcome of these proceedings.

Our success also depends on our ability to handle a large number of simultaneous calls, which our network may not be able to accommodate.

We expect the volume of simultaneous calls to increase significantly as the 8x8 subscriber base grows. Our network hardware and software may not be able to accommodate this additional volume. If we fail to maintain an appropriate level of operating performance, or if our service is disrupted, our reputation could be hurt and we could lose customers, all of which could have a material adverse effect on our business, financial condition or operating results.

We could be liable for breaches of security on our web site, fraudulent activities of our users, or the failure of third party vendors to deliver credit card transaction processing services.

A fundamental requirement for operating an Internet-based, worldwide voice and video communications service and electronically billing our 8x8 customers is the secure transmission of confidential information and media over public networks. Although we have developed systems and processes that are designed to protect consumer information and prevent fraudulent credit card transactions and other security breaches, failure to mitigate such fraud or breaches may adversely affect our operating results. The law relating to the liability of providers of online payment services is currently unsettled and states may enact their own rules with which we may not comply. We rely on third party providers to process and guarantee payments made by 8x8 subscribers up to certain limits, and we may be unable to prevent our customers from fraudulently receiving

goods and services. Our liability risk will increase if a larger fraction of our 8x8 transactions involve fraudulent or disputed credit card transactions. Any costs we incur as a result of fraudulent or disputed transactions could harm our business. In addition, the functionality of our current billing system relies on certain third party vendors delivering services. If these vendors are unable or unwilling to provide services, we will not be able to charge for our 8x8 services in a timely or scalable fashion, which could significantly decrease our revenue and have a material adverse effect on our business, financial condition and operating results.

We have experienced losses due to subscriber fraud and theft of service.

Subscribers have, in the past, obtained access to the 8x8 service without paying for monthly service and international toll calls by unlawfully using our authorization codes or by submitting fraudulent credit card information. To date, such losses from unauthorized credit card transactions and theft of service have not been significant. We have implemented anti-fraud procedures in order to control losses relating to these practices, but these procedures may not be adequate to effectively limit all of our exposure in the future from fraud. If our procedures are not effective, consumer fraud and theft of service could significantly decrease our revenue and have a material adverse effect on our business, financial condition and operating results.

Natural disasters, war, terrorist attacks or malicious conduct could adversely impact our operations that could degrade or impede our ability to offer services.

As a provider of "cloud-based" services, our services rely on uninterrupted connection to the Internet through data centers and networks. Any interruption or disruption to our network, or the third parties on which we rely, could adversely impact our ability to provide service. Our network could be disrupted by circumstances outside of our control including natural disasters, acts of war, terrorist attacks or other malicious acts including, but not limited to, cyberattacks. Should any of these events occur and interfere with our ability to operate our network even for a limited period of time, we could incur significant expenses, lose substantial amounts of revenue, suffer damage to our reputation, and lose customers. Any of these events could have a material adverse impact on our business.

Vulnerabilities to security breaches, cyber intrusions and other malicious acts could adversely impact our business.

Critical to our provision of service is the storage, processing, and transmission of confidential and sensitive data. We store, process and transmit a wide variety of confidential and sensitive information including credit card, bank account and other financial information, proprietary, trade secret or other data that may be protected by intellectual property laws, customers' and employees' personally identifiable information, as well as other sensitive information. We, along with others in the industry, will be subject to cyber threats and security breaches, either by third parties or employees, given the nature of the information we store, process and transmit. Our continued ability to securely store, process and transmit data is essential to our business.

We are aware of the risks associated with cyber threats and we have implemented a number of measures to protect ourselves from cyber attacks. Specifically, we have redundant servers such that if we suffer equipment or software failures in one location or on one set of servers, we have the ability to provide continuity of service. We actively monitor our network for cyber threats and implement protective measures periodically. We conduct vulnerability assessments and penetration testing and engage in remedial action based on such assessments. Depending on the evolving nature of cyber threats and the measures we may have to implement to continue to maintain the security of our networks and data, our profitability may be adversely be impacted or we may have to increase the retail price of our services that may make our offerings less competitive with other communications providers.

But, like all other companies in the marketplace, there is no guarantee that we will not be adversely impacted by cyberattacks. If our employees or third parties obtain unauthorized access to our secure network, or if our network is penetrated, our service could be disrupted, sensitive information could be lost, stolen or disclosed that could have variety of negative impacts including legal liability in form of class action lawsuits, investigations by federal and state

law enforcement agencies, could expose us to fines or penalties, and could harm our business reputation where any of these eventualities could have a material negative impact on our business.

A higher rate of customer terminations would negatively affect our business by reducing our revenue or requiring us to spend more money to grow our customer base.

Our rate of customer terminations, or average monthly customer churn (excluding cancellations within 30 days of sign-up), was 1.8% for the fiscal year ended March 31, 2013 compared with 2.0% for the fiscal year ended March 31, 2012. Our churn rate could increase in the future if customers are not satisfied with our service. Other factors, including increased competition from other VoIP providers, alternative technologies, and adverse business conditions also influence our churn rate.

Because of churn, we have to acquire new customers on an ongoing basis just to maintain our existing level of customers and revenues. As a result, marketing expenditures are an ongoing requirement of our business. If our churn rate increases, we will have to acquire even more new customers in order to maintain our existing revenues. We incur significant costs to acquire new customers, and those costs are an important factor in determining our net profitability. Therefore, if we are unsuccessful in retaining customers or are required to spend significant amounts to acquire new customers beyond those budgeted, our revenue could decrease and our net income could decrease.

Our future operating results may vary substantially from period to period and may be difficult to predict.

Our historical operating results have fluctuated significantly and will likely continue to fluctuate in the future, and a decline in our operating results could cause our stock price to fall. On an annual and a quarterly basis, there are a number of factors that may affect our operating results, many of which are outside our control. These include, but are not limited to:

- changes in market demand;
- the timing of customer orders;
- customer cancellations;
- competitive market conditions;
- lengthy sales cycles and/or regulatory approval cycles;
- new product introductions by us or our competitors;
- market acceptance of new or existing products;
- the cost and availability of components;
- the mix of our customer base and sales channels;
- the mix of products and services sold;
- the number of additional business customers, on a net basis;
- the management of inventory;
- continued compliance with industry standards and regulatory requirements; and
- general economic conditions.

Due to these and other factors, we believe that period-to-period comparisons of our results of operations are not meaningful and should not be relied upon as indicators of our future performance. It is possible that in some future periods our results of operations may be below the expectations of public market analysts and investors. If this were to occur, the price of our common stock would likely decline significantly.

We need to retain key personnel to support our products and ongoing operations.

The development and marketing of our VoIP services will continue to place a significant strain on our limited personnel, management, and other resources. Our future success depends upon the continued services of our executive officers and other key employees who have critical industry experience and relationships that we rely on to implement our business plan. None of our officers or key employees are bound by employment agreements for any specific term. The loss of the services of any of our officers or key employees could delay the development and introduction of, and negatively impact our ability to sell our services which could adversely affect our financial results and impair our growth. We currently do not maintain key person life insurance policies on any of our employees.

We may need to raise additional capital to support our future operations.

As of March 31, 2013, we had cash and cash equivalents and investments of approximately \$52.3 million. While we believe these funds are sufficient to meet our current and anticipated liquidity requirements, we may need to raise additional capital to pursue our strategic objectives. We may seek additional funding through public or private equity or debt financing. Recently, we filed a shelf registration statement with the SEC that was declared effective on April 5, 2013. This shelf registration statement allows us to sell up to an additional amount of approximately \$250 million of our securities from time to time during the next three years. We might decide to raise additional capital at such times and upon such terms as management considers favorable and in our interests, including, but not limited to, from the sale of our debt and/or equity securities under our shelf registration statement, but we cannot be certain that we will be able to complete offerings of our securities at such times and on such terms as we may consider desirable for us. Any such financings may be upon terms that are potentially dilutive to existing stockholders. We may not be able to obtain such additional financing as needed on acceptable terms, or at all, which may require us to reduce our operating costs and other expenditures, including reductions of personnel and capital expenditures.

Our stock price has been highly volatile.

The market price of the shares of our common stock has been and is likely to continue to be highly volatile. It may be significantly affected by factors such as:

- actual or anticipated fluctuations in our operating results;
- announcements of technical innovations;
- future legislation or regulation of the Internet and/or VoIP;
- loss of key personnel;
- new entrants into the VOIP service marketplace, including cable and incumbent telephone companies and other well-capitalized competitors;
- new products or new contracts by us, our competitors or their customers;
- the perceived or real impact of events that negatively affect our direct competitors; and
- developments with respect to patents or proprietary rights, general market conditions, changes in financial estimates by securities analysts, and other factors which could be unrelated to, or outside of, our control.

The stock market has from time to time experienced significant price and volume fluctuations that have particularly affected the market prices for the common stocks of technology companies and that have often been unrelated to the operating performance of particular companies. These broad market fluctuations may adversely affect the market price of our common stock. In the past, following periods of volatility in the market price of a company's securities, securities class action litigation has often been initiated against the issuing company. If our stock price is volatile, we may also be subject to such litigation. Such litigation could result in substantial costs and a diversion of management's attention and resources, which would disrupt business and could cause a decline in our operating results. Any settlement or adverse determination in such litigation would also subject us to significant liability.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

Our principal operations are located in San Jose, CA in a facility that is approximately 104,657 square feet of office space. We believe our new facilities will adequately meet our current and foreseeable future needs. For additional information regarding our obligations under leases see Note 4 to the consolidated financial statements contained in Part II, Item 8 of this Report.

ITEM 3. LEGAL PROCEEDINGS

From time to time, we become involved in various legal claims and litigation that arise in the normal course of our operations. While the results of such claims and litigation cannot be predicted with certainty, we are not currently aware of any such matters that we believe would have a material adverse effect on our financial position, results of operations or cash flows.

On February 22, 2011, we were named a defendant in a lawsuit, Bear Creek Technologies, Inc. v. 8x8, Inc. *et al.*, along with 20 other defendants. On August 17, 2011, the suit against us was dismissed without prejudice from this lawsuit under Rule 21 of the Federal Rules of Civil Procedure. On August 17, 2011, we were sued again by Bear Creek Technologies, Inc. in the United States District Court for the District of Delaware. We believe we have factual and legal defenses to these claims and we are presenting a vigorous defense. Further, on November 28, 2012, the U.S. Patent & Trademark Office ("USPTO") initiated a Reexamination proceeding with a Reexamination Declaration explaining that there is a substantial new question of patentability, based on four separate grounds, affecting each claim of the patent which is the basis for the complaint filed against the Company. On March 26, 2013, the USPTO issued a first Office Action in the Reexamination, with all claims of the '722 patent being rejected on each of the four separate grounds raised in the Request for Reexamination. There is a pending motion to stay the litigation based on the possibility that at least one of the rejections will be upheld. We cannot estimate potential liability in this case at this early stage of litigation.

On October 25, 2011, we were named a defendant in a lawsuit, Klausner Technologies, Inc. v. Oracle Corporation *et al.*, along with 30 other defendants. The lawsuit alleges infringement of a patent that is now believed to be expired. On November 1, 2011, Klausner dismissed the complaint voluntarily and filed new complaints separating the defendants, including a new Complaint against us. We believe we have factual and legal defenses to these claims and we are presenting a vigorous defense, and we have filed several motions consistent therewith including a motion to transfer and a motion to dismiss the complaint as filed on February 23, 2012. On March 21, 2013, Chief Judge Davis granted our Motion to Change Venue, and has thereby ordered that this case be transferred to the US District Court for the Northern District of California on or after April 4, 2013. This case been transferred accordingly. We have not answered the complaint. We cannot estimate potential liability in this case at this early stage of litigation.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY AND RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

We completed our initial public offering on July 2, 1997 under the name 8x8, Inc. From that date through April 3, 2000, our common stock was traded on the NASDAQ National Market, or the NASDAQ, under the symbol "EGHT." From April 4, 2000 through July 18, 2001, our common stock was traded on the NASDAQ under the symbol "NTRG." Since July 19, 2001 our common stock has traded under the symbol "EGHT." In July 2002, in connection with the transformation of the NASDAQ to a national securities exchange our listing was transferred to the NASDAQ Capital Market of the NASDAQ Stock Market LLC.

We have never paid cash dividends on our common stock and have no plans to do so in the foreseeable future. As of May 15, 2013, there were 257 holders of record of our common stock.

Edgar Filing: 8X8 INC /DE/ - Form 10-K

The following table sets forth the range of high and low close prices for each period indicated:

Period	High	Low
Fiscal 2013:		
First quarter	\$ 4.36	\$ 3.80
Second quarter	\$ 7.02	\$ 4.14
Third quarter	\$ 7.58	\$ 5.62
Fourth quarter	\$ 7.95	\$ 6.00
Fiscal 2012:		
First quarter	\$ 4.97	\$ 2.80
Second quarter	\$ 5.44	\$ 3.00
Third quarter		

\$ 4.67

\$ 3.13

Fourth quarter

\$ 4.73

\$ 3.11

See Item 12 of Part III of this Report regarding information about securities authorized for issuance under our equity compensation plans.

The graph below shows the cumulative total stockholder return over a five year period assuming the investment of \$100 on March 31, 2008 in each of 8x8's common stock, the NASDAQ Composite Index and the NASDAQ Telecommunications Index. The graph is furnished, not filed, and the historical return cannot be indicative of future performance.

On August 1, 2012, we sold 53,899 shares of common stock at \$3.315 per share, and 94,951 shares of common stock at \$3.774 per share to employee participants in our Employee Stock Purchase Plan, or ESPP. On February 1, 2013, we sold 98,256 shares of common stock at \$3.774 per share, and 54,197 shares of common stock at \$4.65 per share to employee participants in our ESPP. None of the shares sold in the transactions on these two dates were registered. Our ESPP was created pursuant to section 423 of the Internal Revenue Code and allows our eligible employees to purchase common stock through payroll deductions at a price equal to 85% of the fair market value of a share of our common stock at the beginning of each two year offering period, or the end of a six month purchase period, whichever is lower. The employees are allowed to completely withdraw all of their payroll contributions prior to the applicable purchase date. Under our ESPP, the purchase dates are February 1 and August 1 of each calendar year.

ITEM 6. SELECTED FINANCIAL DATA

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

We were founded in 1987 and completed an initial public offering of common stock in 1997. We develop and market telecommunications services for Internet protocol, or IP, telephony and video applications as well as web-based conferencing and unified communications services. We offer the 8x8 Virtual Office hosted PBX service, 8x8 Virtual Contact Center service, the 8x8 Virtual Office Pro unified communications solution and 8x8 Cloud-Based Computing solutions. As of March 31, 2013, we had more than 32,500 business customers. Each business customer subscribes to a number of various lines and services (*e.g.* physical phone extensions, contact center seats, virtual extensions, fax lines, toll free numbers, receptionist software, unified communications services, etc.). Since fiscal 2004, substantially all of our revenues have been generated from the sale, license and provision of VoIP products, services and technology. Prior to fiscal 2003, our focus was on our VoIP semiconductor business.

CRITICAL ACCOUNTING POLICIES & ESTIMATES

Our consolidated financial statements are prepared in conformity with accounting principles generally accepted in the United States of America. Note 1 to the consolidated financial statements in Part II, Item 8 of this Report describes the significant accounting policies and methods used in the preparation of our consolidated financial statements.

We have identified the policies below as some of the more critical to our business and the understanding of our results of operations. These policies may involve a higher degree of judgment and complexity in their application and represent the critical accounting policies used in the preparation of our consolidated financial statements. Although we believe our judgments and estimates are appropriate, actual future results may differ from our estimates. If different assumptions or conditions were to prevail, the results could be materially different from our reported results. The impact and any associated risks related to these policies on our business operations is discussed throughout Management's Discussion and Analysis of Financial Condition and Results of Operations where such policies affect our reported and expected financial results.

Use of Estimates

The preparation of the consolidated financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities and equity and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. On an ongoing basis, we evaluate our estimates, including, but not limited to, those related to bad debts, valuation of inventories, and litigation and other contingencies. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results could differ from those estimates under different assumptions or conditions. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets, liabilities and equity that are not readily apparent from other sources. Actual results could differ from those estimates under different assumptions or conditions. Additional information regarding risk factors that may impact our estimates is included above under Part I, Item 1A, "Risk Factors."

Revenue Recognition

Our revenue recognition policies are described in Note 1 to the consolidated financial statements in Part II, Item 8 of this Report. As described below, significant management judgments and estimates must be made and used in connection with the revenue recognized in any accounting period. Material differences may result in the amount and timing of our revenue for any period if our management made different judgments or utilized different estimates.

Under the terms of our typical subscription agreement, new customers can terminate their service within 30 days of order placement and receive a full refund of fees previously paid. We have determined that we have sufficient history of subscriber conduct to make a reasonable estimate of cancellations within the 30-day trial period. Therefore, we recognize new subscriber revenue in the month in which the new order was shipped, net of an allowance for expected cancellations.

Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") 605-25 requires that revenue arrangements with multiple deliverables be divided into separate units of accounting if the deliverables in the arrangement meet specific criteria. In addition, arrangement consideration must be allocated among the separate units of accounting based on their relative fair values, with certain limitations. The provisioning of the 8x8 service with the accompanying 8x8 IP Telephone constitutes a revenue arrangement with multiple deliverables. In accordance with the guidance of ASC 605-25, we allocate 8x8 revenues, including activation fees, among the 8x8 IP telephones and subscriber services based on the fair value determined by their relative selling prices. Revenues allocated to these devices are recognized as product revenues during the period of the sale less the allowance for estimated returns during the 30-day trial period. All other revenues are recognized when the related services are provided. We record revenue net of any sales-related taxes that are billed to our customers. We believe this approach results in consolidated financial statements that are more easily understood by investors. The cost of the products sold is recognized contemporaneously with the recognition of product revenue.

At the time of each revenue transaction, we assess whether the revenue amount is fixed and determinable and whether collection is reasonably assured. We assess whether the fee is fixed and determinable based on the payment terms associated with the transaction. If a significant portion of a fee is due after our normal payment terms, which are 30-90 days from invoice date, we account for the fee as not being fixed and determinable. In these cases, we recognize revenue as the fees become due. We assess collection based on a number of factors, including past transaction history with the customer and the creditworthiness of the customer. We generally do not request collateral from our customers. If we determine that collection of a fee is not reasonably assured, we defer the fee and recognize revenue at the time collection becomes reasonably assured, which is generally upon receipt of payment. We defer recognition of

revenue on product sales to retailers where the right of return exists until products are resold to the end user and the trial period has expired.

Under our revenue recognition accounting principles, if a software license arrangement includes acceptance criteria, we do not recognize revenue until we can demonstrate objectively that the software or service can meet the acceptance criteria or that the customer has signed formal acceptance documentation. If a software license arrangement obligates us to deliver unspecified future products, we recognize revenue on a subscription basis, ratably over the term of the contract.

For all sales, except those completed via the Internet, we use either a binding purchase order or other signed agreement as evidence of an arrangement. For sales over the Internet, we use a credit card authorization as evidence of an arrangement, and recognize revenue upon settlement of the transaction, if there are no customer acceptance conditions. We do not settle credit card transactions until equipment related to the transaction, if any, is shipped to a customer.

Our ability to enter into revenue generating transactions and recognize revenue in the future is subject to a number of business and economic risks discussed above under Item 1A, "Risk Factors."

Collectability of Accounts Receivable

We must make estimates of the collectability of our accounts receivable. Management specifically analyzes accounts receivable, including historical bad debts, customer concentrations, customer creditworthiness, current economic trends and changes in our customer payment terms when evaluating the adequacy of the allowance for doubtful accounts. As of March 31, 2013, the accounts receivable balance was \$3,880,000, net of an allowance for doubtful accounts of \$480,000, including a reserve for disputed credits, and an estimated returns reserve of \$152,000. If the financial condition of our customers deteriorates, our actual losses may exceed our estimates, and additional allowances would be required.

Valuation of Inventories

We write down our inventory for estimated obsolescence or unmarketable inventory equal to the difference between the cost of inventory and the estimated market value based upon assumptions about future demand, market conditions and replacement costs. If actual future demand or market conditions are less favorable than those projected by us, additional inventory write-downs may be required.

Income and Other Taxes

As part of the process of preparing our consolidated financial statements we are required to estimate our income taxes in each of the jurisdictions in which we operate. This process requires us to estimate our actual current tax expense and to assess temporary differences resulting from book-tax accounting differences for items such as accrued vacation. These differences result in deferred tax assets and liabilities, which are included within our consolidated balance sheet. We must then assess the likelihood that our deferred tax assets will be recovered from future taxable income and to the extent we believe that recovery is not likely, we must establish a valuation allowance. In the event that we determine that we would be able to realize deferred tax assets in the future in excess of the net recorded amount, an adjustment to the deferred tax asset would increase income in the period such determination was made.

Significant management judgment is required to determine the valuation allowance recorded against our net deferred tax assets, which include net operating loss and tax credit carry forwards. The valuation allowance is based on our estimates of taxable income by jurisdiction in which we operate and the period over which our deferred tax assets will be recoverable. During the fourth quarter of fiscal 2012, we reassessed the need for a valuation allowance against our net deferred tax asset and concluded that it was more likely than not that we would be able to realize a significant portion of our deferred tax assets. Accordingly, we released most of our valuation allowance related to our deferred tax asset which resulted in a credit to the income statement of approximately \$62.1 million. We determined that a release of a portion of our valuation allowance was appropriate as a result of the following discrete events: (1) our attainment of three consecutive years of net income, (2) the acquisition of Contactual in the second quarter of fiscal 2012, (3) the completion of the Section 382 ownership analysis under the Internal Revenue Code for Contactual in the fourth quarter of fiscal 2012. During the fourth quarter of fiscal 2013, we evaluated the need for a valuation allowance against our net deferred tax asset and concluded that an additional allowance was needed. Therefore, we increased our valuation allowance related to our state net operating loss and tax credit carryovers which resulted in a debit to the income statement of approximately \$1.0 million. We determined that an increase in our valuation allowance was

appropriate as a result of the change in the net income apportionment methodology in California. In making this determination, we considered all available positive and negative evidence, including our recent earnings trend and expected continued future taxable income. As of March 31, 2013, the net deferred tax asset on the consolidated balance sheet represented the projected tax benefit we expect to realize. We continue to maintain a valuation allowance against the remainder of our deferred tax assets that we believe we will not be able to utilize.

We have received inquiries, demands or audit requests from several state, municipal and 9-1-1 taxing agencies seeking payment of taxes that are applied to or collected from the customers of providers of traditional public switched telephone network services. We recorded no expense for the years ended March 31, 2013, 2012 and 2011 for estimated tax exposure for such assessments.

Stock-Based Compensation

We account for our employee stock options, stock purchase rights and restricted stock units granted under the 1996 Stock Plan, 1996 Director Option Plan, 1999 Nonstatutory Stock Option Plan, the 2006 Stock Plan, the 2003 Contactual Plan, the 2012 Equity Incentive Plan and stock purchase rights under the 1996 Employee Stock Purchase Plan (collectively "Equity Compensation Plans") under the provisions of ASC 718 - *Stock Compensation*. Under the provisions of ASC 718, share-based compensation cost is measured at the grant date, based on the estimated fair value of the award, and is recognized as an expense over the employee's requisite service period (generally the vesting period of the equity grant), net of estimated forfeitures.

Stock-based compensation expense recognized in the Consolidated Statements of Income for fiscal 2013, 2012 and 2011, was measured based on ASC 718 criteria. Compensation expense for all share-based payment awards is recognized using the straight-line single-option method and includes the impact of estimated forfeitures. ASC 718 requires forfeitures to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates.

To value option grants, stock purchase rights and restricted stock units under the Equity Compensation Plans for actual and pro forma stock-based compensation we used the Black-Scholes option valuation model. Fair value determined using the Black-Scholes option valuation model varies based on assumptions used for the expected stock prices volatility, expected life, risk free interest rates and future dividend payments. For fiscal years 2013, 2012 and 2011, we used the historical volatility of our stock over a period equal to the expected life of the options to their fair value. The expected life assumptions represent the weighted-average period stock-based awards are expecting to remain outstanding. These expected life assumptions were established through the review of historical exercise behavior of stock-based award grants with similar vesting periods. The risk free interest was based on the closing market bid yields on actively traded U.S. treasury securities in the over-the-counter market for the expected term equal to the expected term of the option. The dividend yield assumption was based on our history and expectation of future dividend payout.

ASC 718 requires us to calculate the additional paid in capital pool ("APIC Pool") available to absorb tax deficiencies recognized subsequent to adopting ASC 718, as if we had adopted ASC 718 at its effective date of January 1, 1995. There are two allowable methods to calculate our APIC Pool: (1) the long form method or (2) the short form method as set forth in ASC 718. We have elected to use the long form method under which we track each award grant on an employee-by-employee basis and grant-by-grant basis to determine if there is a tax benefit or tax deficiency for such award. We then compared the fair value expense to the tax deduction received for each grant and aggregated the benefits and deficiencies to establish the APIC Pool.

Due to the adoption of ASC 718, some option exercises result in tax deductions in excess book deductions based on the option value at the time of grant. We recognize these windfall tax benefits associated with the exercise of stock options directly to stockholders' equity only when realized. We use the "with and without" approach as described in ASC 740, in determining the order in which our tax attributes are utilized. The "with and without" approach results in the recognition of the windfall stock option tax benefits only after all other tax attributes of ours have been considered in the annual tax accrual computation. Also, we have elected to ignore the indirect tax effects of share-based compensation deductions in computing our research and development tax credits and alternative tax credits and as such, we recognize the full effect of these deductions in the consolidated income statement in the period in which the taxable event occurs.

SELECTED OPERATING STATISTICS

We periodically review certain key business metrics, within the context of our articulated performance goals, in order to evaluate the effectiveness of our operational strategies, allocate resources and maximize the financial performance of our business. The selected operating statistics include the following:

	Selected Operating Statistics				
	March 31, 2013	Dec 31, 2012	Sept. 30, 2012	June 30, 2012	March 31, 2012
Gross business customer additions (1)	2,808	2,617	2,915	2,943	2,892
Number of new services sold (1)(2)	50,728	44,391	42,920	41,146	39,221
Average number of subscribed services per new business customer (3)	18.1	17.0	14.7	14.0	13.6
Business subscriber acquisition cost per service (4)	\$ 92	\$ 98	\$ 89	\$ 97	\$ 99
Total business customers (5)	32,535	31,473	30,498	29,913	28,671
Average number of subscribed services per business customer (6)	11.5	11.2	10.6	10.1	9.8
Business customer average monthly service revenue per customer (7)	\$ 263	\$ 260	\$ 256	\$ 250	\$ 244
Business customer churn (less cancellations within 30 days of sign-up) (8)	1.7%	1.6%	2.4%	1.7%	2.0%
Business service revenue churn	1.5%	2.6%	1.0%	2.3%	1.6%
Overall service margin	80%	78%	76%	75%	76%
Overall product margin	-17%	-34%	-22%	-30%	-15%
Overall gross margin	71%	68%	68%	67%	68%

- (1) Does not include customers of Virtual Office Solo or Zerigo, Inc. ("Zerigo").
- (2) Number of recurring revenue services sold to business customers during the period.
- (3) Number of new services sold divided by gross business customer additions.
- (4) The combined costs of advertising, marketing, promotions, sales commissions and equipment subsidies for new services sold during the period divided by the number of new services sold during the period.
- (5) Business customers are defined as customers paying for service. Customers that are currently in the 30-day trial period are considered to be customers that are paying for service. Customers subscribing to Virtual Office Solo or Zerigo services are not included as business customers.
- (6) The simple average number of subscribed services divided by the simple average number of business customers during the period. The simple average number of subscribed services is the number of subscribed services on the first day of the period plus the number of subscribed services on the last day of the period divided by two. The simple average number of business customers is the number of business customers on the first day of the period plus the number of business customers on the last day of the period divided by two.
- (7) Business customer average monthly service revenue per customer is service revenue from business customers in the period divided by the number of months in the period divided by the simple average number of business customers during the period.
- (8) Business customer churn is calculated by dividing the number of business customers that terminated (after the expiration of the 30-day trial) by the simple average number of business customers and dividing the result by the number of months in the period. In the second quarter of fiscal 2013, an affiliate with 411 business customers representing approximately \$9,000 of

monthly service revenue cancelled service. Excluding these 411 cancellations, business customer churn (less cancellations within 30 days of sign-up) was 1.9%.

We believe it is useful to monitor these metrics together and not individually, as we do not make business decisions based upon any single metric.

RESULTS OF OPERATIONS

The following discussion should be read in conjunction with our Consolidated Financial Statements and related notes included elsewhere in this Report.

We have minimal seasonality in our business but typically sales of new subscriptions in our fourth fiscal quarter are greater than any of the first three quarters of the fiscal year. We believe this occurs because the customers we target have a tendency to spend a greater portion of their annual capital budgets at the beginning of the calendar year rather than the last three quarters of the year.

REVENUE

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Service revenue	\$ 98,212	\$ 78,382	\$ 64,998	\$ 19,830	25.3%	\$ 13,384	20.6%
Percentage of total revenue	91.3%	91.4%	92.6%				

Service revenue consists primarily of revenues attributable to the provision of our 8x8 services and royalties earned under our VoIP technology licenses. We expect that 8x8 service revenues will continue to comprise nearly all of our service revenues for the foreseeable future.

The increase in fiscal year 2013, compared with fiscal year 2012, was primarily attributable to an increase in 8x8 service revenues resulting from growth of our business service subscriber base. Our business service subscriber base grew from approximately 28,500 customers at the end of fiscal 2012 to approximately 32,500 customers on March 31, 2013. The increase was partially offset by a decrease in customers of our residential services. These changes were consistent with the redirection of our marketing efforts toward our business customer service. We expect the trends to continue in future periods.

The increase in fiscal year 2012, compared with fiscal year 2011, was primarily attributable to an increase in 8x8 service revenues resulting from growth of our business service subscriber base. Our business service subscriber base grew from approximately 24,000 customers at the end of fiscal 2011 to approximately 28,500 customers on March 31, 2012. The increase was partially offset by a decrease in customers of our residential services.

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Product revenue	\$ 9,402	\$ 7,421	\$ 5,165	\$ 1,981	26.7%	\$ 2,256	43.7%
Percentage of total revenue	8.7%	8.6%	7.4%				

Product revenue consists primarily of revenues from sales of IP telephones, primarily attributable to our 8x8 service.

The increase in fiscal year 2013 from fiscal year 2012 resulted from a \$2.0 million increase in product revenue attributable to growth in our business customer subscriber base, for which we have been subsidizing equipment purchases.

The increase in fiscal year 2012 from fiscal year 2011 resulted from a \$2.3 million increase in product revenue attributable to growth in our business customer subscriber base, for which we have been subsidizing equipment purchases.

No single customer represented more than 10% of our total revenues during fiscal 2013, 2012 or 2011.

The following table illustrates our net revenues by geographic area. Revenues are attributed to countries based on the destination of shipment (in thousands):

	Years Ended March 31,		
	2013	2012	2011
United States	\$ 104,387	\$ 83,841	\$ 69,455
Other locations	3,227	1,962	708
	\$ 107,614	\$ 85,803	\$ 70,163

COST OF REVENUE

	Years Ended March 31,			Year-over-Year Change	
	2013	2012	2011	2012 to 2013	2011 to 2012
	<i>(dollar amounts in thousands)</i>				
Cost of service revenue	\$ 22,201	\$ 18,065	\$ 14,508	\$ 4,136	22.9%
Percentage of service revenue	22.6%	23.0%	22.3%	\$ 3,557	24.5%

Cost of service revenue primarily consists of costs associated with network operations and related personnel, telephony origination and termination services provided by third party carriers and technology license and royalty expenses.

The increase in cost of service revenue for fiscal 2013 from fiscal 2012 was primarily due to a \$2.6 million increase in third party network service expenses, a \$0.8 million increase in payroll and related expenses, a \$0.7 million increase in depreciation expenses, a \$0.4 million increase in amortization expense due to intangibles acquired in acquisitions, a \$0.1 million increase in consultant and outside service expenses. The increase in cost of service revenues was partially offset by a \$0.3 million reduction in license and fee expenses, a \$0.1 million decrease in expensed computer equipment and furniture and fixtures and a \$0.1 million reduction in other cost of service expenses.

The increase in the cost of service revenue for fiscal 2012 from fiscal 2011 was primarily due to a \$1.2 million increase in third party network service expenses, a \$1.1 million increase in payroll and related expenses, a \$0.4 million increase in consultant and outside service expenses, a \$0.4 million increase in amortization expense due to intangibles acquired in the acquisitions of Contactual, Inc. and Zerigo, Inc., a \$0.3 million increase in depreciation expenses, a \$0.2 million increase in expensed computer equipment and furniture and fixtures, and a \$0.1 million increase in repair and maintenance expenses. The increase in cost of service revenues was partially offset by a \$0.2 million reduction in license and fee expenses and a \$0.1 million decrease in recruiting expenses.

	Years Ended March 31,			Year-over-Year Change	
	2013	2012	2011	2012 to 2013	2011 to 2012
	<i>(dollar amounts in thousands)</i>				
Cost of product revenue	\$ 11,801	\$ 9,822	\$ 8,115	\$ 1,979	20.1%
Percentage of product revenue	125.5%	132.4%	157.1%	\$ 1,707	21.0%

The cost of product revenue consists of costs associated with systems, components, system manufacturing, assembly and testing performed by third party vendors, estimated warranty obligations and direct and indirect costs associated with product purchasing, scheduling, shipping and handling. We allocate a portion of service revenues to product revenues but these revenues are less than the cost of the product.

The increase in the cost of product revenue for fiscal 2013 from fiscal 2012 was primarily due to a \$1.8 million increase in the shipment of equipment to our business customers, a \$0.1 million increase in warranty expense, and a \$0.1 million increase in freight costs.

The increase in the cost of product revenue for fiscal 2012 from fiscal 2011 was primarily due to a \$1.8 million increase in the shipment of equipment to our business customers and a \$0.1 million increase in freight costs. The increase in cost of product revenues was partially offset by a \$0.2 million decrease in payroll and related expenses due to reduction in headcount.

RESEARCH AND DEVELOPMENT EXPENSES

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Research and development	\$ 8,147	\$ 6,745	\$ 4,819	\$ 1,402	20.8%	\$ 1,926	40.0%
Percentage of total revenue	7.6%	7.9%	6.9%				

Historically, our research and development expenses have consisted primarily of personnel, system prototype design, and equipment costs necessary for us to conduct our development and engineering efforts. We expense research and development costs as they are incurred.

The increase in research and development expenses for fiscal 2013 from fiscal 2012 was primarily attributable to a \$1.1 million increase in payroll and related expenses, a \$0.1 million increase in recruiting expenses, and a \$0.2 million increase in other research and development expenses.

The increase in research and development expenses for fiscal 2012 from fiscal 2011 was primarily attributable to a \$1.5 million increase in payroll and related expenses, a \$0.3 million increase in consulting and outside service expenses and a \$0.1 million increase in other research and development expenses.

SALES AND MARKETING EXPENSES

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Sales and marketing	\$ 46,244	\$ 37,980	\$ 31,744	\$ 8,264	21.8%	\$ 6,236	19.6%
Percentage of total revenue	43.0%	44.3%	45.2%				

Sales and marketing expenses consist primarily of personnel and related overhead costs for sales, marketing, and customer service. Such costs also include outsourced customer service call center operations, sales commissions, as well as trade show, advertising and other marketing and promotional expenses.

The increase in sales and marketing expenses for fiscal 2013 from fiscal 2012 was primarily due to a \$6.2 million increase in payroll and related expenses from an increase in our sales force, a \$0.4 million increase in third party sales commissions, \$0.3 million increase in sales promotion expenses, a \$0.3 million increase in bad debt expense, a \$0.2 million increase in amortization expense due to intangibles acquired in acquisitions, and a \$0.9 million net increases in other sales and marketing expenses.

The increase in sales and marketing expenses for fiscal 2012 from fiscal 2011 was primarily due to a \$4.3 million increase in payroll and related expenses due to an increase in our sales force, a \$0.7 million increase in advertising expenses, a \$0.5 million increase in sales promotion expenses, a \$0.3 million increase in amortization of customer relationship intangible, a \$0.2 million increase in temporary personnel, consulting and outside service expenses, a \$0.2 million increase in travel and meal expenses, a \$0.2 million increase in tradeshow expenses, a \$0.1 million increase in public relation expenses, a \$0.1 million increase in bad debt expense and a \$0.1 million increase in credit card processing fees. This increase was partially offset by a \$0.6 million reduction in legal expenses, as fiscal 2011 included a \$0.6 million accrual related to the memorandum of understanding to settle a lawsuit against us in fiscal 2011.

GENERAL AND ADMINISTRATIVE EXPENSES

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
General and administrative	\$ 8,619	\$ 6,012	\$ 4,733	\$ 2,607	43.4%	\$ 1,279	27.0%
Percentage of total revenue	8.0%	7.0%	6.7%				

General and administrative expenses consist primarily of personnel and related overhead costs for finance, human resources and general management.

The increase in general and administrative expenses for fiscal 2013 from fiscal 2012 was primarily due to a \$1.0 million increase in payroll and related expenses, a \$0.9 million increase in temporary personnel, consulting and outside service expenses, a \$0.2 million increase in sales and use tax expense, a \$0.2 million increase in recruiting expense and a \$0.3 million increase in other general and administrative expenses.

The increase in general and administrative expenses for fiscal 2012 from fiscal 2011 was primarily due to a \$0.5 million increase in legal expenses related to patent litigation and merger and acquisitions, a \$0.4 million increase in payroll and related expenses, a \$0.2 million increase in temporary personnel, consulting and outside service expenses, a \$0.1 million increase in facility related expenses and a \$0.1 million increase in meals, travel and entertainment costs. The increase in general and administrative expenses was partially offset by \$0.1 million reduction in sales, property and franchise taxes due to settlement and release of outstanding state sales tax audit.

GAIN ON PATENT SALE

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Gain on patent sale	\$ (12,965)	\$ -	\$ -	\$ (12,965)	N/A	\$ -	N/A
Percentage of total revenue	-12.0%	0.0%	0.0%				

In June 2012, we entered into a patent purchase agreement for the sale of a family of United States patents. We recognized a gain of slightly less than \$12.0 million, net of transaction costs, in the first fiscal quarter of 2013 and approximately \$1.0 million in the fourth fiscal quarter of 2013 due to the third party purchaser entering into a license agreement with its customer. The gain on patent sale has been recorded as a reduction of operating expenses in the consolidated statements of income.

INTEREST INCOME (LOSS) AND OTHER, NET

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Interest income (loss) and other, net	\$ 105	\$ (305)	\$ 138	\$ 410	-134.4%	\$ (443)	-321.0%
Percentage of total revenue	0.1%	-0.4%	0.2%				

This item primarily consisted of capital gains distribution and interest income in fiscal 2013 and 2011. Our interest income (loss) and other, net, primarily consists of an impairment charge to write down the strategic investment in Stonyfish, Inc. and interest and investment income earned on our cash, cash equivalents and investment balances in fiscal 2012.

The increase in other income (loss) and other, net for fiscal 2013 from fiscal 2012 consists primarily of an increase in capital gain distributions due on mutual funds and interest income earned.

The decrease in other income (loss) and other, net for fiscal 2012 from fiscal 2011 consists primarily of the impairment charge due to the write down of our strategic investment of \$0.4 million offset by capital gain distributions earned on our mutual funds and interest income earned on our cash, cash equivalents and investment balances of \$0.1 million.

INCOME ON CHANGE IN FAIR VALUE OF WARRANT LIABILITY

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Income on change in fair value of warrant liability	\$ -	\$ -	\$ 167	\$ -	N/A	\$ (167)	-100.0%
Percentage of total revenue	0.0%	0.0%	0.2%				

In connection with the sale of shares of our common stock in fiscal 2005 and 2006, we issued warrants in three different equity financings. The income on change in fair value of the warrant liability in fiscal 2011 is due to the partial exercise and expiration of all remaining warrants in the third quarter of fiscal 2011.

PROVISION (BENEFIT) FOR INCOME TAXES

	Years Ended March 31,			Year-over-Year Change			
	2013	2012	2011	2012 to 2013		2011 to 2012	
	<i>(dollar amounts in thousands)</i>						
Provision (benefit) for income taxes	\$ 9,733	\$ (62,354)	\$ 55	\$ 72,087	-115.6%	\$ (62,409)	-113470.9%
Percentage of total revenue	9.0%	-72.7%	0.1%				

We recorded an income tax provision of \$9.7 million in fiscal year 2013 of which \$8.7 million related to net income from operations, including the sale of patent under our patent purchase agreement, and \$1.0 million due to an increase in our valuation allowance. During the fourth quarter of fiscal 2013, we evaluated the need for a valuation allowance against our net deferred tax asset and determined that an additional \$1.0 million was needed for certain net operating loss carryovers that may expire before utilization. Therefore, we increased the valuation allowance related to the deferred tax asset which resulted in a debit to the consolidated income statement of approximately \$1.0 million.

We recorded an income tax benefit of \$62.4 million in fiscal 2012, primarily related to the release of \$62.1 million of our valuation allowance in the fourth quarter of fiscal 2012 and the release of \$0.4 million of our valuation allowance due to the acquisition of Zerigo in the first fiscal quarter of 2012 partially offset by \$0.1 million of state income tax expense. During the fourth quarter of fiscal 2012, we evaluated the need for a valuation allowance against our net deferred tax assets and concluded that it was more likely than not that we would be able to realize our deferred tax assets with the exception of certain net operating loss and tax credit carryforwards. Accordingly, in the fourth quarter of fiscal 2012, we released a significant portion of our valuation allowance related to our net deferred tax assets. The effective tax rate for the fiscal year ended March 31, 2012 differed from the statutory federal income tax rate primarily because we utilized prior net operating losses and available tax credits when we had a valuation allowance against our deferred tax assets. Therefore, our income tax provision consisted primarily of minimum and capital state income taxes and foreign income tax.

As of March 31, 2011, we provided a full valuation allowance related to our net deferred tax assets as we believed the objective and verifiable evidence of our historical pre-tax net losses outweighed the existing positive evidence regarding our ability to realize our deferred tax assets.

At March 31, 2013, we had net operating loss carryforwards for federal and state income tax purposes of approximately \$149.3 million and \$95.4 million, respectively, that expire at various dates beginning in 2014 and continuing through 2032. In addition, at March 31, 2013, we had research and development credit carryforwards for federal and state tax reporting purposes of approximately \$2.4 million and \$3.7 million, respectively. The federal credit carryforwards will begin expiring in 2021 continuing through 2033, while the California credit will carry forward indefinitely. Under the ownership change limitations of the Internal Revenue Code of 1986, as amended, the amount and benefit from the net operating losses and credit carryforwards may be limited in certain circumstances.

At March 31, 2013 and 2012, we had net deferred tax assets before valuation allowances of approximately \$55.6 million and \$63.8 million, respectively.

LIQUIDITY AND CAPITAL RESOURCES

As of March 31, 2013, we had \$52.3 million of cash and cash equivalents and investments. By comparison, at March 31, 2012, we had \$24.4 million in cash and cash equivalents. We currently have no borrowing arrangements. We believe we have sufficient liquidity to fund operations for the foreseeable future. In addition, we have a shelf registration statement that would allow us to raise up to \$250 million from the sale of new securities of ours. Please refer to Part I, Item 1A, Risk Factors "We may need to raise additional capital to support our future operations."

2013 to 2012

Net cash provided by operating activities for fiscal 2013 was \$31.8 million, compared with \$9.2 million provided by operating activities for fiscal 2012. The increase in cash provided by operating activities was primarily due to the sale of patent under our patent purchase agreement (\$13.0 million) and use of our deferred tax assets to reduce our cash taxes due (\$9.3 million). Cash provided by operating activities has historically been affected by:

- the amount of net income;
- sales of subscriptions;
- changes in working capital accounts, particularly in deferred revenue due to timing of annual plan renewals;
- add-backs of non-cash expense items such as depreciation and amortization; and
- the expense associated with stock-based awards.

Net cash used in investing activities was \$5.9 million in fiscal 2013, compared with \$3.0 million used in investing activities in fiscal 2012. The increase in cash used in investing activities during fiscal 2013 is primarily related to the purchase of additional equipment and leasehold improvements related to our new facility (\$3.4 million) offset by a reduction in cash used to purchase businesses in fiscal 2012 (\$0.7 million).

Net cash provided by financing activities was \$2.0 million in fiscal 2013, compared with net cash used of \$0.3 million in financing activities in fiscal 2012. Our financing activities for fiscal 2013 provided cash of \$2.5 million due to issuance of common stock under our employee stock purchase plan and the issuance of shares related to the exercise of options. The cash provided by financing activities in fiscal 2013 was partially offset by \$0.5 million due to repurchase of restricted shares and payment of capital leases.

2012 to 2011

Net cash provided by operating activities for fiscal 2012 was \$9.2 million, compared with \$8.6 million provided by operating activities for fiscal 2011. Cash used in or provided by operating activities has historically been affected by:

- the amount of net income;
- sales of subscriptions;
- changes in working capital accounts, particularly in deferred revenue due to timing of annual plan renewals;
- add-backs of non-cash expense items such as depreciation and amortization; and
- the expense associated with stock options and stock-based awards.

Net cash used in investing activities was \$3.0 million in fiscal 2012, compared with \$5.4 million used in investing activities in fiscal 2011. The decrease in cash used in investing activities during fiscal 2012 was primarily related to the purchase of investments in December 2010 (\$2.0 million), the acquisition of a strategic investment in Stonyfish in April 2010 (\$0.3 million) and a net decrease in cash used in the acquisition of businesses (\$0.3 million). The decrease in cash used in investing activities during fiscal 2012 was partially offset by an increase in the cash used to purchase equipment in fiscal 2012 (\$0.2 million).

Net cash used in financing activities was \$0.3 million in fiscal 2012, compared with \$4.8 million used in financing activities in fiscal 2011. Our financing activities for fiscal 2012 used cash of \$2.6 million for the repurchase of shares of common stock under our share repurchase plan, \$0.4 million for the buyout of stock options under the existing provisions of our 1996 Stock Plan and 1999 Nonstatutory Stock Option Plan and \$0.3 million for capital lease payments. The use of cash in financing activities in fiscal 2012 was partially offset by \$3.0 million in cash provided by the issuance of common stock under our employee stock option plans and employee stock purchase plan, as well as the issuance of restricted shares.

Contractual Obligations

Future operating lease payments, capital lease payments and purchase obligations at March 31, 2013 for the next five years were as follows (in thousands):

	Year Ending March 31,					Total
	2014	2015	2016	2017	2018	
Capital leases	\$ 22	\$ 21	\$ 7	\$ -	\$ -	\$ 50
Office leases	1,578	1,625	1,674	1,724	4,698	11,299
Purchase obligations						
Third party customer support provider	2,158	-	-	-	-	2,158
Third party network service providers	2,091	1,579	52	-	-	3,722
Open purchase orders	48	-	-	-	-	48
	\$ 5,897	\$ 3,225	\$ 1,733	\$ 1,724	\$ 4,698	\$ 17,277

We lease our headquarters facility in San Jose, California under an operating lease agreement that expires in October 2019. The lease is an industrial net lease with monthly base rent of \$130,821 for the first 15 months with a 3% increase each year thereafter, and requires us to pay property taxes, utilities and normal maintenance costs.

In the third quarter of 2010, we amended our contract with one of our third party customer support vendors containing a minimum monthly commitment of approximately \$430,000. The agreement requires a 150-day notice to terminate. At March 31, 2013, the total remaining obligation under the contract was \$2.2 million.

We entered into contracts with multiple vendors for third party network service providers which expire on various dates in fiscal 2014 through 2016. At March 31, 2013, the total remaining obligations under these contracts were \$3.7 million.

At March 31, 2013, we had open purchase orders of \$48,000, primarily related to inventory purchases from our contract manufacturers. These purchase commitments are reflected in our consolidated financial statements once goods or services have been received or at such time when we are obligated to make payments related to these goods or services.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The primary objective of our investment activities is to preserve principal while maximizing income without significantly increasing risk. Some of the securities in which we invest may be subject to market risk. This means that a change in prevailing interest rates may cause the principal amount of the investment to fluctuate. To minimize this risk, we may maintain our portfolio of cash equivalents and investments in a variety of securities, including commercial paper, money market funds, debt securities and certificates of deposit. The risk associated with fluctuating interest rates is limited to our investment portfolio and we do not believe that a 10% change in interest rates would have a significant impact on our interest income.

During the years ended March 31, 2013 and 2012, we did not have any outstanding debt instruments other than equipment under capital leases and, therefore, we were not exposed to market risk relating to interest rates.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders 8x8, Inc.

We have audited the accompanying consolidated balance sheets of 8x8, Inc. (the Company), as of March 31, 2013 and 2012, and the related consolidated statements of income, comprehensive income, stockholders' equity and cash flows for each of the three years in the period ended March 31, 2013. We also have audited the Company's internal control over financial reporting as of March 31, 2013, based on criteria established in *Internal Control - Integrated Framework* by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in management's report on internal control over financial reporting, appearing under Item 9A. Our responsibility is to express an opinion on these consolidated financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also include performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of 8x8, Inc., as of March 31, 2013 and 2012, and the consolidated results of its operations and its cash flows for each of the three years in the period ended March 31, 2013, in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, 8x8, Inc., maintained, in all material respects, effective internal control over financial reporting as of March 31, 2013, based on criteria established in *Internal Control - Integrated Framework* by the Committee of Sponsoring Organizations of the Treadway Commission.
