MEDIA RELEASE

Gold Fields Reports Increase in Mineral Resources and Reserves

Johannesburg, 2 October 2003: Gold Fields Limited (GFI NYSE and JSE) announces increases in both its Mineral Resources and Reserves for fiscal year ending 30 June, 2003.

Attributable Resources have increased from 186.0 to 195.3 million ounces, including the Arctic Platinum Project in Finland. Attributable Reserves have increased by 3.0 million ounces to 81.5 million ounces.

Ian Cockerill, Chief Executive Officer of Gold Fields said: To end the year with a net gain of 3 million reserve ounces, and to offset the 4.7 million ounces we depleted, means that we actually found 7.7 million ounces of new reserves during the year. This reflects well on the increased focus on organic growth and exploration within Gold Fields.

Gold Fields spends approximately US\$70 million a year on exploration worldwide. Of this, approximately US\$30 million is spent on brownfields exploration on or near existing mining properties, where the new reserves were found.

Gold Fields reports its Mineral Resources and Reserves in accordance with the South African Code for the Reporting of Mineral Resources and Mineral Reserves (SAMREC Code). The code has been incorporated into the rules of the JSE Securities Exchange South Africa regarding listing requirements and continuing obligations. In addition Gold Fields has written and implemented an additional internal code of practice that takes cognisance of the diverse nature of its operations and considers the requirements of all internationally recognised codes, including industry Guide 7 as interpreted by the Staff of the US Securities Exchange Commission.

A comprehensive Resources and Reserves Statement can be found on the Company's website at www.goldfields.co.za or in its recently published annual report for 2003 which was mailed to all shareholders and is available upon request.
