CGG completes in record 9 days true fast-track depth imaging of 1700 sq km of marine data

Paris, France June 2, 2015

CGG announced today that it has completed in record time the fast-track results for a 1,748-square-kilometer BroadSeis 3D marine acquisition and depth imaging project for one of the world's largest international oil companies. Just 9 days after the last shot point, CGG delivered pre-stack depth migration (PSDM) volumes using Kirchhoff and Reverse Time Migration (RTM).

The fast-track BroadSeis volume was successfully processed through deghosting, 3D demultiple, tomography, salt model building and PSDM. This achievement would not have been possible without CGG's talented offshore and onshore technical staff, its petaflop computing facility and innovative processing and imaging technology.

Jean-Georges Malcor, CGG CEO, said: "This impressive accomplishment is the result of CGG's continuous efforts to meet and exceed our clients' expectations for fast delivery of best-in-class imaging products to accelerate decision-making on their prospects. We are able to achieve this through seamless management of offshore and onshore processing capabilities to deliver the very best product."
