The First Quarterly Report for 2016

2.3

Review of operating results

In the first quarter of 2016, the global economic recovery remained weak, and Chinese economy maintained steady growth with GDP up by 6.7%. International oil prices bottomed in January but remained at low level. Domestic apparent consumption of refined oil products grew by 4.0% over the same period last year, driven by the increase of gasoline and kerosene consumption partly offset by a decline in diesel consumption. Domestic ethylene equivalent consumption was flat compared with a year ago.

Focusing on growth quality and profitability, the Company intensified its evaluation of the macro-economy and market trends and actively responded to these changes. The Company emphasised on reform and innovation, stringent management and tight coordination of all aspects of work. In accordance with the ASBE and IFRS, net profit attributable to equity shareholders of the Company was RMB 6.19 billion and RMB 6.66 billion respectively in the first quarter.

**Exploration and Production:** Through projects optimization and implementation of a flexible investment decision-making mechanism in respond to oil price fluctuations, we reduced our high-cost oil production. In exploration, we actively carried forward high-efficiency exploration activities, making a number of discoveries in Sichuan Basin, Ordos Basin, and Central Tahe Basin. In development, we achieved steady progress in development of Fuling shale gas field (phase II), optimised development programs in mature oilfields and increased development in frontier acreages. In the first quarter, the oil and gas production of the Company was 114.7 million barrels of oil equivalent, declined by 2.7%, out of which crude oil output down by 9.3% while natural gas up by 16.7%, compared with the same period last year. Impacted by the sustained low crude oil prices, Exploration and Production Segment had an operating loss of RMB 12.53 billion.

**Refining:** the Company adjusted the product mix in response to market demand by increasing production of gasoline and kerosene, maintained safe and stable refinery operations and upgraded refined oil products quality as scheduled. We optimised resource allocation, controlled costs and took advantage of our strong economies of scale. By tapping our well-established advantages in specialisation, we improved our profit margins in LPG, etc. In the first quarter, refinery throughput decreased by 2.4% and refined oil products production dropped by 1.4%, among which gasoline up by 4.7%, jet fuel up by 4.5% and diesel down by 8.0% over the same period last year. Benefited by product mix optimisation and the refined oil product pricing mechanism improvement, Refining Segment had an operating profit of RMB 13.44 billion, a reversal from the loss-making situation in the same period last year.

**Marketing and Distribution:** in response to the changes in supply and demand of refined oil products, we optimised resource allocation and adjusted our marketing strategies and promoted the sales of high-octane gasoline and high-value-added products. In the transformation from a fuel supplier to a comprehensive service provider, we optimised marketing network and reinforced mutual promotion between fuel and non-fuel businesses. As a result, total retail volume and throughput per station sustained growth despite of intense market competition. In the first quarter, total sales volume of refined oil products was 47.21 million tonnes, up by 1.6% over the same period last year. Total domestic sales volume of refined oil products was 43.29 million tonnes, up by 3.0%, of which retail volume reached 29.66 million tonnes, up by 2.6% over the same period

## The First Quarterly Report for 2016

last year. Transaction of non-fuel business reached RMB 8.91 billion, up by 41.4% compared with the same period last year. The operating profit of Marketing and Distribution Segment was RMB 7.69 billion, up by 45.6% compared with the same period last year.

Chemicals: the Company fine-tuned its feedstock mix to lower costs and enhanced the operations of our production facilities by adjusting utilisation rates based on marginal profitability, while keeping sustained safe and stable operations. We strengthened the links among research and development, production, marketing and sales of new products, and increased production of high-value-added products tailored to market demands. In the first quarter, ethylene production reached 2.823 million tonnes, up by 2.0% and chemical sales volume was 15.621 million tonnes, up by 6.7% over the same period last year. Benefited from feedstock mix and product slate adjustment, decreased feedstock costs and upgraded competitiveness of naphtha-based chemicals, the operating profit of Chemicals Segment was RMB 4.58 billion, up by 49.3% compared with the same period last year.

## The First Quarterly Report for 2016

## 4.3 Differences between Consolidated Financial Statements prepared in accordance with the accounting policies complying with ASBE and IFRS (unaudited)

Other than the differences in the classifications of certain financial statements captions and the accounting for the items described below, there are no material differences between the Group's consolidated financial statements prepared in accordance with the accounting policies complying with ASBE and IFRS. The reconciliation presented below is included as supplemental information, is not required as part of the basic financial statements and does not include differences related to classification, presentation or disclosures. Such information has not been subject to independent audit or review. The major differences are:

## (i) Government Grants

Under ASBE, grants from the government are credited to capital reserve if required by relevant governmental regulations. Under IFRS, government grants relating to the purchase of fixed assets are recognized as deferred income and are transferred to the income statement over the useful life of these assets.

## (ii) Safety Production Fund

Under ASBE, safety production fund should be recognized in profit or loss with a corresponding increase in reserve according to PRC regulations. Such reserve is reduced for expenses incurred for safety production purposes or, when safety production related fixed assets are purchased, is reduced by the purchased cost with a corresponding increase in the accumulated depreciation. Such fixed assets are not depreciated thereafter. Under IFRS, payments are expensed as incurred, or capitalised as fixed assets and depreciated according to applicable depreciation methods.

Effects of major differences between the net profit under ASBE and the profit for the period under IFRS are analysed as follows:
