(Date of Event Which Requires Filing of This Statement)

If the filing person has previously filed a statement on Schedule 13G to report the acquisition that is the subject of this Schedule 13D, and is filing this schedule because of §§ 240.13d-1(e), 240.13d-1(f) or 240.13d-1(g), check the following box “.”

Note: Schedules filed in paper format shall include a signed original and five copies of the schedule, including all exhibits. See § 240.13d-7 for other parties to whom copies are to be sent.

1 The remainder of this cover page shall be filled out for a reporting person’s initial filing on this form with respect to the subject class of securities, and for any subsequent amendment containing information which would alter disclosures provided in a prior cover page.

The information required on the remainder of this cover page shall not be deemed to be “filed” for the purpose of Section 18 of the Securities Exchange Act of 1934 (“Act”) or otherwise subject to the liabilities of that section of the Act but shall be subject to all other provisions of the Act (however, see the *Notes*).

CUSIP NO. 237690102

The following constitutes Amendment No. 7 to the Schedule 13D filed by the undersigned (“Amendment No. 7”). This Amendment No. 7 amends the Schedule 13D as specifically set forth herein.

Item 3. Source and Amount of Funds or Other Consideration.

Item 3 is hereby amended and restated to read as follows:

The Shares purchased by Kanen Wealth Management, LLC and Mr. Kanen were purchased with working capital (which may, at any given time, include margin loans made by brokerage firms in the ordinary course of business) in open market purchases, except as otherwise noted, as set forth in Schedule A, which is incorporated by reference herein. The aggregate purchase price of the 478,310 Shares beneficially owned by Kanen Wealth Management, LLC is approximately \$1,140,060, including brokerage commissions. The aggregate purchase price of the 43,497 Shares beneficially owned by Mr. Kanen is approximately \$85,241, including brokerage commissions.

Item 5. Interest in Securities of the Issuer.

Item 5 is hereby amended and restated to read as follows:

The aggregate percentage of Shares reported owned by each person named herein is based upon 8,241,049 Shares outstanding, as of October 26, 2017, which is the total number of Shares outstanding as reported in the Issuer’s Annual Report on Form 10-Q filed with the Securities and Exchange Commission on November 9, 2017.

A. Kanen Wealth Management, LLC

(a) As of the close of business on November 21, 2017, Kanen Wealth Management, LLC beneficially owned 478,310 Shares.

Percentage: 5.8%

- (b)
1. Sole power to vote or direct vote: 0
 2. Shared power to vote or direct vote: 478,310
 3. Sole power to dispose or direct the disposition: 0
 4. Shared power to dispose or direct the disposition: 478,310

(c) The transactions in the Shares by Kanen Wealth Management, LLC since the filing of Amendment No. 6 are set forth in Schedule A and are incorporated herein by reference.

B. David Kanen

(a) As of the close of business on November 21, 2017, Mr. Kanen directly beneficially owned 43,497 Shares. Mr. Kanen, as the managing member of Kanen Wealth Management, LLC, may be deemed the beneficial owner of the 478,310 Shares owned by Kanen Wealth Management, LLC.

Percentage: 6.3%

CUSIP NO. 237690102

- (b)
1. Sole power to vote or direct vote: 43,497
 2. Shared power to vote or direct vote: 478,310
 3. Sole power to dispose or direct the disposition: 43,497
 4. Shared power to dispose or direct the disposition: 478,310

(c) The transactions in the Shares by Mr. Kanen and Kanen Wealth Management, LLC since the filing of Amendment No. 6 are set forth in Schedule A and are incorporated herein by reference.

Kanen Wealth Management, LLC, in its role as investment manager to several customer accounts (collectively, the "Accounts") to which it furnishes investment advice, and Mr. Kanen, as the managing member of Kanen Wealth Management, LLC, may each be deemed to beneficially own shares of the Issuer's Common Stock held in the Accounts.

- (1) The value of property, plant and equipment pertaining to non-controlling shareholders in the accounting for minority interests resulting from acquisitions of various subsidiaries has been recorded at appraised values rather than at historical cost as required by U.S. GAAP.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

(2) Segment revenues and cost of goods sold include intersegment sales.

(3) EBITDA represents net income before interest expense, income taxes and depreciation, depletion and amortization. We present EBITDA because we consider it an important supplemental measure of our operating performance and believe it is frequently used by securities analysts, investors and other interested parties in the evaluation of companies in our industry. We also present EBITDA by segment because our overall performance is best explained with reference to results of each segment.

EBITDA has limitations as an analytical tool, and should not be considered in isolation or as a substitute for analysis of our operating results as reported under U.S. GAAP. Some of these limitations are as follows:

EBITDA does not reflect the impact of financing costs, which are significant and could further increase if we incur more debt, on our operating performance.

EBITDA does not reflect the impact of income taxes on our operating performance.

EBITDA does not reflect the impact of depreciation, depletion and amortization on our operating performance. The assets of our businesses which are being depreciated, depleted and/or amortized (including, for example, our mineral reserves) will have to be replaced in the future and such depreciation, depletion and amortization expense may approximate the cost to replace these assets in the future. By excluding such expense from EBITDA, EBITDA does not reflect our future cash requirements for such replacements.

Other companies in our industry may calculate EBITDA differently or may use it for different purposes than we do, limiting its usefulness as a comparative measure.

We compensate for these limitations by relying primarily on our U.S. GAAP operating results and using EBITDA only supplementally. See our consolidated income statements and consolidated statements of cash flows included elsewhere in this document.

EBITDA is a measure of our operating performance that is not required by, or presented in accordance with, U.S. GAAP. EBITDA is not a measurement of our operating performance under U.S. GAAP and should not be considered as an alternative to net income, operating income or any other performance measures derived in accordance with U.S. GAAP or as an alternative to cash flow from operating activities or as a measure of our liquidity. In particular, EBITDA should not be considered as a measure of discretionary cash available to us to invest in the growth of our business.

Reconciliation of EBITDA to net income is as follows for the periods indicated:

	Year ended December 31,				
	2007	2006	2005	2004	2003
	(in thousands of U.S. dollars)				
Consolidated EBITDA reconciliation:

(4) The 2004 amount includes a gain of \$800.0 million from the sale of our stake in Magnitogorsk Iron & Steel Works OAO ("MMK").

Exchange Rates

The following tables show, for the periods indicated, certain information regarding the exchange rate between the ruble and the U.S. dollar, based on data published by the Central Bank of the Russian Federation (the "CBR").

These rates may differ from the actual rates used in preparation of our financial statements and other financial information provided herein.

Year ended December 31,	Rubles per U.S. dollar			
	High	Low	Average ⁽¹⁾	Period End
2007	26.58	24.26	25.58	24.55
2006	28.78	26.18	27.19	26.33
2005	29.00	27.46	28.29	28.78
2004	29.45	27.75	28.81	27.75
2003	31.88	29.25	30.69	29.45

- (1) The average of the exchange rates on the last business day of each full month during the relevant period.

	Rubles per U.S. dollar	
	High	Low
May 2008	23.88	23.54
April 2008	23.67	23.34
March 2008	24.05	23.51
February 2008	24.78	24.12
January 2008	24.89	24.29
December 2007	24.75	24.42

The exchange rate between the ruble and the U.S. dollar on June 19, 2008 was 23.66 rubles per one U.S. dollar.

No representation is made that the ruble or U.S. dollar amounts in this document could have been or can be converted into U.S. dollars or rubles, as the case may be, at any particular rate or at all.

Recent Developments**Cave-in at Lenin underground mine**

On May 30, 2008, there was a cave-in at the Lenin underground mine, an asset of our subsidiary Southern Kuzbass Coal Company in Kemerovo region in Russia. Five of our workers were killed. The causes of the accident are being investigated by the Kemerovo region office of the Russian Federal Service for Environmental, Technological and Nuclear Supervision ("Rostekhnadzor"). The mine resumed operations on June 16, 2008.

Dividends

On May 29, 2008, our Board of Directors recommended to the annual shareholders' meeting an annual dividend of 26.38 rubles per one common share for the 2007 fiscal year. The total dividend the Board recommended to the annual shareholders' meeting would amount to RUR 10,981,222,253.00.

Change in share-to-ADS ratio

On May 19, 2008, we announced a change in the ratio of our ADSs to common shares from 1:3 to 1:1. We issued two additional ADSs for each ADS existing after the market close on May 16, 2008 to implement the ratio change.

Preferred shares

We are considering a placement and listing of preferred shares on domestic and international markets. On April 30, 2008, our shareholders at an extraordinary shareholders' meeting adopted amendments to our charter, which were registered with the Russian state unified register of legal entities (as required for the amendments to become effective) on May 7, 2008. Pursuant to our amended charter we are authorized to issue 138,756,915 preferred shares with a nominal value of RUR 10 per share. The authorized preferred shares are not convertible into bonds or other securities, including common shares, of Mechel. Pursuant to a resolution dated May 14, 2008, our Board of Directors decided to increase our charter capital by authorizing Mechel's issuance of 55,000,000 preferred shares with a nominal value of RUR 10 per share.

Acquisition of Ductil Steel

In April 2008, we acquired a 100% stake in Ductil Steel S.A. ("Ductil Steel") for a purchase price of \$221.0 million. Ductil Steel is a Romanian company that owns the Buzau plant which produces carbon and low alloyed steel rolled and wire products, and the Otelu Rosu plant which produces steel and billets for rolling. The Otelu Rosu plant's products are supplied to the Buzau plant and to third parties both domestically within Romania and abroad for further processing. In 2007, Ductil Steel produced 341,158 tonnes of raw steel, as well as 330,900 tonnes of steel billets, 178,462 tonnes of rebar, 96,603 tonnes of wire, 69,542 tonnes of wire rod, 47,764 tonnes of wire mesh and 6,631 tonnes of nails.

Acquisition of Oriel Resources plc

As of May 28, 2008, we completed the purchase of 99.5% of the outstanding shares of Oriel Resources plc ("Oriel") from its shareholders in a public offer conducted under the U.K. Takeover Code. We intend to purchase the remaining Oriel shares pursuant to a mandatory takeover procedure under Chapter 3 of Part 28 of the U.K. Companies Act 2006. The final purchase price was approximately \$1.5 billion.

Restructuring of mining and ferroalloy assets

We are currently in the process of separating and consolidating our coal and iron ore assets under a separate mining subsidiary holding company within our group, and we intend to carry out a similar separation and consolidation of our ferroalloy assets (including nickel) in the near term. In connection with this restructuring, we intend to implement management, reporting and control systems for each such subsidiary holding company, allowing for the preparation of consolidated financial statements for each of them. We believe that such separation and consolidation will enable these businesses to obtain the financing necessary for their development and will enable us to optimize their value within our group, including through more focused operational management teams. Such financings may include the issuance and/or sale of both debt and equity securities, including the sale of equity securities in connection with a listing on an international stock exchange.

We intend to retain voting control of these subsidiary holding companies as we continue to build upon our business model of vertical integration among our segments. See " Risk Factors Risks Relating to Our Business and Industry If shares of our subsidiary holding companies are listed on a stock exchange, it could entail changes in such companies' management and corporate governance that might affect our integrated business model."

Risk Factors

An investment in our Shares (including, as defined above, our ADSs and GDSs) involves a high degree of risk. You should carefully consider the following information about these risks, together with the information contained in this document, before you decide to buy our Shares. If any of the following risks actually occurs, our business, financial condition, results of operations or prospects could be materially adversely affected. In that case, the value of our Shares could also decline and you could lose all or part of your investment.

We have described the risks and uncertainties that our management believes are material, but these risks and uncertainties may not be the only ones we face. Additional risks and uncertainties, including those we currently are not aware of or deem immaterial, may also result in decreased operating revenues, increased operating expenses or other events that could result in a decline in the value of our Shares.

Risks Relating to Our Business and Industry

We operate in cyclical industries, and any local or global downturn, whether or not primarily affecting the mining and/or steel industries, may have an adverse effect on our results of operations and financial condition.

Our mining business sells coal, iron ore and nickel. These commodities are traded in markets throughout the world and are influenced by various factors beyond our control, such as global economic cycles and economic growth rates. Prices of these products have varied significantly in the past and could vary significantly in the future. Prolonged declines in world market prices for these products would have a material adverse effect on our revenues.

The steel industry is highly cyclical in nature because the industries in which steel customers operate are cyclical and sensitive to changes in general economic conditions. The demand for steel products thus generally correlates to macroeconomic fluctuations in the economies in which steel producers sell products, as well as in the global economy. The prices of steel products are influenced by many factors, including demand, worldwide production capacity, capacity-utilization rates, raw-material costs, exchange rates, trade barriers and improvements in steel-making processes. Steel prices have experienced, and in the future may experience, significant fluctuations as a result of these and other factors, many of which are beyond our control.

The steel and mining industries are highly competitive, and we may not be able to compete successfully.

We face competition from Russian and international steel manufacturers and mining companies. Recent consolidation in the steel sector globally has also led to the creation of several large steel producers, some of which have greater financial resources and more modern facilities compared to us. We also face price-based competition from steel producers in emerging market countries, including, in particular, Ukraine. Increased competition could result in more competitive pricing and reduce our profitability.

Our competitiveness is based in part on our operations in Russia and other former Eastern Bloc countries having a lower cost of production than competitors in higher-cost locations. Economic growth in the countries where our operations are based has been rapid in recent years and there has been a consistent upward trend in the past several years in production costs, particularly with respect to wages and transportation. See "Recent and potential developments in the Russian rail transportation sector expose us to uncertainties regarding transportation costs of raw materials and steel products" and "Inflation could increase our costs and decrease operating margins." If these production costs continue to increase in the jurisdictions in which we operate, our competitive advantage will be diminished, which could have a material adverse effect on our results of operations and financial condition.

Successful implementation of our strategy to expand our specialty long product sales and coal sales depends on our ability to increase our export sales of these products.

While we expect continued growth of demand in the Russian market for specialty long products, our strategy to expand these sales substantially is dependent on our ability to increase our exports of these products to other countries, particularly the E.U. countries. We face a number of obstacles to this strategy, including trade barriers and sales and distribution challenges.

Likewise, our strategy to increase our sales of coal, particularly high-grade coking coal, is substantially dependent on our ability to increase our exports of these products from our coal assets in the Russian Far East to other countries, particularly Japan, China, South Korea and other Pacific Rim countries. In order to implement this strategy, we must complete the tasks of expanding the cargo-handling capacity of our Port Posiet seaport on the Sea of Japan and making the capital improvements necessary for the development of our Elga coal deposit. See " We will require a significant amount of cash to fund our capital improvements program." If we fail to manage successfully the obstacles and tasks involved in the implementation of our export sales expansion strategy, it could materially adversely affect our prospects.

We will require a significant amount of cash to fund our capital improvements program.

Our ability to generate cash or obtain financing depends on many factors beyond our control, and we need cash and/or financing to carry out our capital expenditures program, which is an important part of our business strategy. We spent \$833.5 million during 2007 and expect to spend approximately \$800 million in 2008 on our capital expenditures program. These capital expenditures include investments in Yakutugol OAO ("Yakutugol"), including those required to be made pursuant to the terms of the subsoil license for the undeveloped Elga coal deposit. We plan to spend \$5.2 billion on our capital expenditures program for the five year period of 2008-2012. See "Item 4. Information on the Company Capital Improvements Program." Our ability to fund planned capital expenditures will, in part, depend on our ability to generate cash in the future. This, to a certain extent, is subject to general economic, financial, competitive, legislative, regulatory and other factors that are beyond our control.

Most of our current borrowings are from Russian and international banks and financial institutions as well as ruble-denominated bonds. In the future, we may rely to a greater extent than currently on foreign capital markets and other foreign financing sources for our capital needs. It is possible that these international sources of financing, as well as Russian sources, may not be available in the future in the amounts we require or may be expensive. To meet our requirements, we will likely need to secure equity or debt financing, especially in international capital markets or from international lenders.

In December 2007, we obtained our first international syndicated long-term loan in the amount of \$2.0 billion in order to refinance our short term loans incurred in connection with the funding of the acquisition of Yakutugol, Elgaugol OAO ("Elgaugol"), which previously held the subsoil license for the Elga deposit, and related assets. In connection with this loan, we pledged to the lenders 49.9999% of the common shares in Yakutugol and have undertaken not to grant any further security interests with respect to our ownership of Yakutugol. It is possible that in the future such foreign sources of financing may not be available or may be expensive.

International credit markets have experienced, and may continue to experience, high volatility and severe liquidity disruptions stemming from the follow-on effects of the illiquidity of U.S. residential mortgage-backed securities. These and other related events have had a significant impact on the global capital markets, and the reduced liquidity in the global capital markets could limit our ability to diversify our funding sources. Increased funding costs or greater difficulty in diversifying our funding sources might have an adverse effect on our business, financial condition and results of operations. See " Risks Relating to the Russian Federation Emerging markets such as Russia are subject to greater risks than more developed markets, and financial turmoil in any emerging market could disrupt our

business, as well as cause the price of our Shares to suffer" and " Risks Relating to the Russian Federation The Russian banking system is still developing, and another banking crisis could place severe liquidity constraints on our business."

If shares of our subsidiary holding companies are listed on a stock exchange, it could entail changes in such companies' management and corporate governance that might affect our integrated business model.

While we intend to continue to operate as an integrated business, if and when a listing of shares takes place in respect of the subsidiary holding companies we are forming or intend to form to consolidate our mining and ferroalloy assets, changes to the management structure of such subsidiary holding companies and/or the assets consolidated within them may be made in preparation for such a listing. After a listing of a subsidiary holding company, the subsidiary's directors and management would operate the business of such subsidiary, in accordance with applicable law, for the benefit of all shareholders, including minority shareholders. In addition, companies listed on stock exchanges typically comply with certain corporate governance requirements and are encouraged to implement certain corporate governance recommendations, including the appointment of independent directors. These and other changes, if implemented in connection with the consolidation and potential listing of subsidiaries holding our mining and/or ferroalloy assets, may result in decision-making by the directors and management of such subsidiaries that may not be consistent with our current integrated business model or otherwise result in situations where the interests of our group do not coincide with the interests of the subsidiary.

Our business strategy envisions additional acquisitions and continued integration, and we may fail to identify suitable targets, acquire them on acceptable terms, identify all potential liabilities associated with them or successfully integrate them into our group.

Our strategy relies on our status as an integrated metals, mining and power group, which allows us to benefit from economies of scale, realize synergies, better satisfy the needs of our Russian and international customers, reduce our reliance on third party brokers by distributing and selling our products directly to end users, and compete effectively against other mining, steel and power producers. We also intend to enhance the profitability of our business by applying our integration strategy to a larger asset base and, towards that end, on an ongoing basis we need to identify suitable targets that would fit into our operations, acquire them on terms acceptable to us and successfully integrate them into our group. We often compete with Russian and international companies for acquisitions, including subsoil licenses.

The acquisition and integration of new companies pose significant risks to our existing operations, including:

additional demands placed on our senior management, who are also responsible for managing our existing operations;

increased overall operating complexity of our business, requiring greater personnel and other resources; and

incurrence of debt to finance acquisitions and higher debt service costs related thereto.

In addition, integrating new acquisitions may require significant initial cash investments. Furthermore, even if we are successful in integrating our existing and new businesses, expected synergies and cost savings may not materialize, resulting in lower than expected profit margins.

We have acquired and established businesses in countries that represent new operating environments for us and which are located at a great distance from our headquarters in Russia. These businesses conduct operations in accordance with local customs and laws. Thus, it may take some time to implement our operating standards and it is possible that for a certain period of time we may face

some uncertainties with respect to the operational and financial needs of these businesses, which may hinder our integration efforts.

In some instances we conduct limited due diligence investigations in connection with our acquisitions due to competitive process and the contractual documentation does not contain representations and warranties and indemnities to protect against unidentified liabilities and other losses. Moreover, these acquired businesses may not have financial reports prepared under internationally-accepted accounting standards. Accordingly, these businesses may face risks that we have not yet identified and that are not described in this document and we may not realize the full benefit of our investment, which could have a material adverse effect on our business and prospects.

In the event the title to any privatized company we acquired is successfully challenged, we risk losing our ownership interest in that company or its assets.

Almost all of our business consists of privatized Russian companies, and our business strategy will likely involve the acquisition of additional privatized companies. The Russian statute of limitations for challenging privatization transactions is three years. However, because Russian privatization legislation is vague, internally inconsistent and in conflict with other legislation, including conflicts between federal and local privatization legislation, and the statute of limitations for challenging certain actions related to privatization may be argued to begin to run only upon the discovery of a violation, many privatizations are vulnerable to challenge. In the event that any title to, or our ownership stakes in, any of the privatized companies acquired by us is subject to challenge as having been improperly privatized and we are unable to defeat this claim, we risk losing our ownership interest in the company or its assets, which could materially adversely affect our business and results of operations.

In addition, under Russian law, transactions in shares may be invalidated on many grounds, including a sale of shares by a person without the right to dispose of such shares, breach of interested party and/or major transaction rules and failure to register the share transfer in the securities register. As a result, defects in earlier transactions in shares of our subsidiaries (where such shares were acquired from third parties) may cause our title to such shares to be subject to challenge.

We have had material weaknesses in our internal control over financial reporting in the past and we make no assurances that additional material weaknesses will not be identified in the future.

Management identified four material weaknesses in our internal control over financial reporting as defined in the Public Company Accounting Oversight Board's Auditing Standard No. 5 that affected our financial statements for the year ended December 31, 2007. The material weaknesses in our internal control over financial reporting identified for the year ended December 31, 2007 are described in "Item 15. Controls and Procedures." Because of the effect of these material weaknesses, our auditors have opined that we have not maintained effective internal control over financial reporting as of December 31, 2007 under Section 404 of the Sarbanes-Oxley Act of 2002.

Notwithstanding the steps we have taken and continue to take that are designed to remedy each material weakness identified as described above, we may not be successful in remedying these material weaknesses in the near or long term and we make no assurances that additional significant deficiencies or material weaknesses in our internal control over financial reporting will not be identified in the future. Our failure to implement and maintain effective internal control over financial reporting could result in errors in our financial statements that could result in a restatement of financial statements, cause us to fail to meet our reporting obligations and cause investors to lose confidence in our reported financial information, leading to a decline in the market price of our Shares.

We depend on key accounting staff for the preparation of U.S. GAAP financial information. Given the competition for such personnel, we may be unable to retain our key accounting staff, which could disrupt our ability to timely and accurately report U.S. GAAP financial information.

Our subsidiaries maintain their books and records in local currencies and prepare accounting reports in accordance with local accounting principles and practices. In particular, each of our Russian subsidiaries maintains its books in rubles and prepares separate unconsolidated financial statements in accordance with Russian accounting standards. For every reporting period, we translate, adjust and combine these Russian statutory financial statements to prepare consolidated financial statements prepared in accordance with U.S. GAAP. This is a time-consuming task requiring us to have accounting personnel experienced in internationally-accepted accounting standards. We believe there is a shortage in Russia of experienced accounting personnel with knowledge of internationally-accepted accounting standards. Moreover, there is an increasing demand for such personnel as more Russian companies are beginning to prepare financial statements on the basis of internationally-accepted accounting standards. Such competition makes it difficult for us to hire and retain such personnel, and our key accounting staff may leave our company. Under these circumstances, we may have difficulty in remedying the material weaknesses in our internal financial controls identified by our management and in the timely and accurate reporting of our financial information in accordance with U.S. GAAP. See " We have had material weaknesses in our internal control over financial reporting in the past and we make no assurances that additional material weaknesses will not be identified in the future."

The potential implementation by the Russian government of a law requiring companies to purchase or lease the land on which they operate may have a material adverse effect on our financial condition.

Much of the land occupied by privatized Russian companies, including most of our subsidiaries, was not included in the privatizations of these companies and is still owned by federal, regional or municipal governments. The companies use the land pursuant to a special title of perpetual use whereby they have the right to use the land but do not have the right to alienate such land.

The Land Code of the Russian Federation, as amended, which was enacted on October 25, 2001 (the "Land Code"), requires privatized Russian companies to either purchase or lease the land on which they operate by January 1, 2010. In accordance with the current legislation the repurchase price of land plots held under special title of perpetual use is set in the amount of 2.5% of the cadastral value of such land plots. We estimate that the cost for us to purchase the land on which we operate is \$61.3 million. This estimate excludes certain land plots on which Beloretsk Metallurgical Plant OAO ("Beloretsk Metallurgical Plant") and Southern Kuzbass Coal Company OAO ("Southern Kuzbass Coal Company") operate, which have not been included in the state cadastral valuation.

Increasing prices of electricity and natural gas could materially adversely affect our business.

In 2007, our Russian operations purchased approximately 4.0 billion kilowatt-hours ("kWh") of electricity, representing 68% of their needs. Domestic electricity prices are currently regulated by the Russian government, but the government is in the process of liberalizing the wholesale electricity market and moving from regulated pricing to a market-based system. This could lead to higher electricity prices. In addition, according to a 2007 long-term macroeconomic forecast made by the Russian Ministry of Economic Development and Trade, electricity prices for industrial users are expected to reach 5.4 cents per kWh in 2008 and from 7.0 to 10.6 cents per kWh by 2020. In 2007, our average cost of electricity was 3.67 cents per kWh. Assuming a price of 5.4 cents per kWh in 2007, our Russian operations would have incurred approximately \$69 million in additional costs. Further price increases for electricity may also occur in the future as the industry is controlled to a greater extent by the private sector. If we are required to pay higher prices for electricity in the future, our costs will rise and our business and prospects could be materially adversely affected.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Our Russian operations also purchase significant amounts of natural gas, primarily for the production of electricity at our own co-generation facilities, from Gazprom OAO ("Gazprom"). Gazprom is a government-controlled company and the dominant producer and monopoly transporter of natural gas within Russia. Domestic natural gas prices are regulated by the Russian government. These prices have been rising over the last few years. The average price for industrial consumers was approximately \$50.4 per thousand cubic meters (\$1.43 per thousand cubic feet) in 2007, and increased by 21% compared with 2006. Further, Russian domestic natural gas prices are significantly below Western European levels, which presently helps to provide us with a cost advantage over our competitors, which is expected to diminish as Russian domestic gas prices approach Western European levels. The Russian Ministry of Economic Development and Trade has forecasted natural gas prices in the range of \$97 to \$100 per thousand cubic meters (\$2.75 to \$2.83 per thousand cubic feet) in 2010. If we are required to pay higher prices for gas in the future, our costs will rise and our business and prospects could be materially adversely affected.

Inflation could increase our costs and decrease operating margins.

In 2007, the inflation rate was 11.9%, according to the Russian Federal State Statistics Service ("Rosstat"). The prices for many of our products are denominated in U.S. dollars. As we tend to experience inflation-driven increases in certain of our ruble-denominated costs, including salaries, rents and energy costs, which are sensitive to rises in the general price level in Russia, our costs in U.S. dollar terms will rise, assuming the ruble-to-dollar exchange rate remains constant. See " Further appreciation in real terms of the ruble against the U.S. dollar may materially adversely affect our results of operations." In this situation, due to competitive pressures, we may not be able to raise the prices we charge for our products sufficiently to preserve operating margins. Accordingly, high rates of inflation in Russia could increase our costs and have the effect of decreasing operating margins.

Wage inflation in Russia has increased our cost of doing business. According to a February 2008 report of the Russian Ministry of Economic Development and Trade, the nominal average monthly wage from January through December 2007 was 26.7% higher than the corresponding period in 2006, and the inflation-adjusted average monthly wage grew by 16.2% from January through December of 2007, compared to a 13.3% increase during the same period in 2006. If wage inflation in Russia continues to increase, our labor costs will rise and our advantages with respect to our competitors with foreign operations that have historically had to pay higher average wages than those paid by us in Russia will be reduced or eliminated. See " The steel and mining industries are highly competitive, and we may not be able to compete successfully."

If we are unable to obtain adequate capital, we may have to limit our operations substantially, which could have a material adverse effect on our business, financial condition and results of operations.

Among other things, increased levels of indebtedness, and particularly increases in the level of secured indebtedness, could potentially: (1) limit our ability to obtain additional financing; (2) limit our flexibility in planning for, or reacting to, changes in the markets in which we compete; (3) place us at a competitive disadvantage relative to our competitors with superior financial resources; (4) lead to a loss of collateral pledged as security; (5) render us more vulnerable to general adverse economic and industry conditions, (6) require us to dedicate all or a substantial part of our cash flow to service our debt; and (7) limit or eliminate our ability to pay dividends. Our ability to make payments on our indebtedness depends upon our ability to maintain our operating performance at a certain level, which is subject to general economic and market conditions and to financial, business and other factors, many of which we cannot control.

In addition, Russian companies are limited in their ability to effect share placements and have shares in circulation outside of Russia, including in the form of ADSs and GDSs, due to Russian securities regulations. We have received permission from the Federal Financial Markets Service (the "FFMS") for up to 40% of our common shares to be circulated abroad through depositary receipt

programs, which was the maximum volume allowed at that time. Current Russian securities regulations provide that no more than 35% of a Russian company's shares of a particular class or type may be placed and/or circulated abroad. It is unclear whether the FFMS's approval of an amount greater than 35% prior to the establishment of this limit will be respected, or whether the 35% limit established in the current regulations overrides prior FFMS permissions for higher amounts. Until this is clarified, we have instructed our depositary not to allow for the conversion of more than 35% of our common shares into ADSs and GDSs. Given that our ADSs and GDSs currently account for approximately 35% of our common shares, we cannot raise additional equity financing through placement of common shares in the form of depositary receipts. Furthermore, in the event that securities regulations are enacted in the future that further reduce the 35% limit, our depositary may be forced to cancel and convert some of our ADSs and GDSs into a corresponding number of common shares. The Russian government or its agencies may also impose other restrictions on international financings by Russian issuers.

Any of the foregoing factors may limit the amount of capital available to meet our operating requirements. If we cannot obtain adequate funds to satisfy our capital requirements, we may need to limit our operations significantly, which could have a material adverse effect on our business, financial condition and results of operations.

We have merged and intend to continue to merge certain subsidiaries for operational reasons from time to time. Under Russian law, such mergers are considered a reorganization and the merged subsidiaries are required to notify their creditors of this reorganization. Russian law also provides that, for a period of 30 days after notice, these creditors have a right to accelerate the merged subsidiaries' indebtedness and demand reimbursement for applicable losses. In the event that we undertake any such merger and all or part of certain of our subsidiaries' indebtedness is accelerated, we and such subsidiaries may not have the ability to raise the funds necessary for repayment and our business and financial condition could be materially adversely affected.

Recent and potential developments in the Russian rail transportation sector expose us to uncertainties regarding transportation costs of raw materials and steel products.

Railway transportation is our principal means of transporting raw materials and steel products to our facilities and to customers in Russia and abroad. The Russian railways are owned by Russian Railways OAO ("Russian Railways"), an open joint-stock company wholly owned by the Russian government. Russian Railways is a state-sanctioned monopoly responsible for the management of all Russian railroads. The Russian government sets domestic rail freight prices and the terms of transportation. These rail freight prices are subject to annual adjustment based on, among other factors, inflation and the funding requirements of Russian Railways' capital investment program, which is in turn affected by the acute need to upgrade Russian Railways' rolling stock, track infrastructure and passenger- and cargo-handling facilities. If rail freight prices increase, or if there is a disruption in transportation of our materials and products due to a shortage of available working rolling stock, it could adversely affect our business, financial condition, results of operations and prospects.

In December 2007, Russian Railways transferred over 200,000 of its freight cars to its subsidiary Pervaya Gruzovaya Kompaniya OAO ("First Freight Company"), which since beginning operations in December 2007 has rented freight cars to us, as well as to other rail freight consignors. However, freight shipping services are still rendered by Russian Railways. The commencement of the operations of First Freight Company has led to an increase in our freight shipment costs. According to Russian Railways, in the future First Freight Company will offer freight shipment services, including international shipping. The Russian press has reported that Russian Railways intends to conduct an initial public offering of First Freight Company shares. If First Freight Company's role in the Russian rail freight industry increases, or if its ownership or business model change as a result of an initial public offering of its shares, it could result in further increases in our freight shipment costs, which in

turn could have a material adverse effect on our business, results of operations, financial condition and prospects.

On May 6, 2008, an interdepartmental Russian government commission on structural reform of the rail transportation sector, headed by the Russian Ministry of Transportation, approved draft amendments to the Federal Law "On Rail Transportation," for further submission to the State Duma. The text of the draft has not been made public. Changes to Russian legislation regulating the rail transportation sector could result in further increases in our freight shipment costs, which in turn could have a material adverse effect on our business, results of operations, financial condition and prospects.

We face numerous protective trade restrictions in the export of our steel segment products, and we may face export duties in the future.

We face numerous protective tariffs, duties and quotas which reduce our competitiveness in, and limit our access to, particular markets. Several key steel importing countries currently have import restrictions in place on steel products or intend to introduce them in the future. The E.U. has a quota system in place with respect to Russian steel imports, which affected our exports to ten countries in Central and Eastern Europe and the Baltic states (Estonia, Lithuania and Latvia) that joined the E.U. in 2004 as well as to Romania and Bulgaria, which joined the E.U. in 2007. Our sales into the E.U. constituted approximately 19% of our steel segment revenues and approximately 61% of our steel segment export revenues in 2007. The export of our steel into the E.U. is an important part of our growth strategy. If E.U. quotas are not increased in line with our sales growth objectives, our ability to expand our sales in the E.U. and pursue our growth strategy could be limited. In addition, the E.U. has imposed antidumping duties on certain of our exports. In February 2008, an antidumping duty in the amount of 17.8% was imposed on exports to the E.U. of ferrosilicon produced by our subsidiary Bratsk Ferroalloy Plant OOO ("Bratsk Ferroalloy Plant") for a period of five years.

In 2007, approximately 20% of our steel segment's revenues from export sales were derived from sales of steel products that were subject to import restrictions. See "Item 4. Information on the Company Steel Business Trade restrictions."

In May 2008, Russia's Minister of Industry and Trade invited us, as well as other major Russian steel producers such as Metalloinvest OOO ("Metalloinvest"), Evraz Group S.A. ("Evraz Group"), Severstal OAO ("Severstal"), MMK and Novolipetsk Metallurgical Works OAO ("NLMK"), to develop a joint position on the Russian government's proposal to impose tariffs on exports of steel from Russia or to abolish import tariffs on imported steel products. The imposition of export duties on steel would make our steel products more expensive for end users, which could reduce our competitiveness vis-à-vis our international competitors and result in a loss of a portion of our export sales, which could materially adversely affect the results of our operations, financial condition and prospects. See " We benefit from Russia's tariffs and duties on imported steel, which may be eliminated in the future."

We benefit from Russia's tariffs and duties on imported steel, which may be eliminated in the future.

Russia has in place import tariffs with respect to certain imported steel products. These tariffs generally amount to 5% of value, but also increase to 15% of value for certain higher value-added steel products. Almost all of our sales of steel products in Russia were protected by these import tariffs in 2007. These tariffs and duties may be reduced or eliminated in the future, which could materially adversely affect our revenues and results of operations.

In August 2007, Russia and Ukraine signed an agreement imposing quotas on the export of Ukrainian steel bars to the Russian market. The agreement will be effective through December 31, 2010. The total quota of steel bars from Ukraine to Russia is equal to 1,205,000 tonnes during the effective term of the trade agreement and is divided into annual volumes. We believe that we benefit from this agreement because it prevents subsidized Ukrainian exports from reducing the prices we otherwise could obtain for these products in our domestic markets.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

From March 20, 2007, an antidumping duty has been imposed on corrosion-resistant steel originating in the E.U. at the rate of €840 per tonne. The duty, which we believe will benefit us, will be in force for a total of three years.

According to available public information, Russia could join the World Trade Organization (the "WTO") as early as 2009. Russia's future accession to the WTO could negatively affect our business and prospects. In particular, Russia's entry into the WTO may require gradual reduction or elimination of import tariffs and duties on steel products, causing increased competition in the Russian steel market from foreign producers and exporters. See also " Increasing prices of electricity and natural gas could materially adversely affect our business."

Further appreciation in real terms of the ruble against the U.S. dollar may materially adversely affect our results of operations.

Our reporting currency is the U.S. dollar. Our products are typically priced in rubles for Russian domestic sales (or in other local currencies for domestic sales outside of Russia, as the case may be) and in U.S. dollars (and, to a lesser extent, euros) for export sales, whereas the majority of our direct costs are incurred in rubles and, to a lesser extent, in other local currencies where our operations are based. Appreciation in real terms of the ruble against the U.S. dollar results in an increase in our costs relative to our revenues, while at the same time depreciating our U.S. dollar-denominated liabilities. In 2007, the ruble appreciated in real terms against the U.S. dollar by 15% as compared with 2006, according to Rosstat. If the prices we are able to charge for our products do not increase enough to compensate for our increasing ruble expenditures, further real appreciation of the ruble against the U.S. dollar may materially adversely affect our results of operations.

Limitations on the conversion of rubles to foreign currencies in Russia could increase our costs when making payments in foreign currencies to suppliers and creditors and could cause us to default on our obligations to them.

Many of our major capital expenditures are denominated and payable in various foreign currencies, including the U.S. dollar and euro. Russian legislation currently permits the conversion of ruble revenues into foreign currency without limitation. However, as the Russian authorities may impose limitations on the currency conversion market in the event of an economic or currency crisis, in such an event there may be a delay or other difficulty in converting rubles into a foreign currency to make a payment or delay in or restriction on the transfer of foreign currency. This, in turn, could limit our ability to meet our payment and debt obligations, which could result in the loss of suppliers, acceleration of debt obligations and cross-defaults and, consequently, have a material adverse effect on our business, financial condition and results of operations.

Estimates of our reserves are subject to uncertainties.

The estimates concerning our reserves contained in this document are subject to uncertainties. These estimates are based on interpretations of geological data obtained from sampling techniques and projected rates of production in the future. Actual production results may differ significantly from reserve estimates. In addition, it may take many years from the initial phase of drilling before production is possible. During that time, the economic feasibility of exploiting a discovery may change as a result of changes in the market price of the relevant commodity.

In addition, the calculation of reserves of the Elga coal deposit, which we acquired in October 2007 along with our acquisition of Yakutugol, is subject to certain risks due to the license obligations and capital costs involved in commencing production and the nature of the undeveloped Elga coal deposit. See "Item 4. Information on the Company Mining Business Mineral reserves."

We are subject to mining risks.

Our business operations, like those of other mining companies, are subject to all of the hazards and risks normally associated with the exploration, development and production of natural resources, any of which could result in production shortfalls or damage to persons or property.

In particular, hazards associated with our open pit mining operations include, but are not limited to:

flooding of the open pit;

collapses of the open pit wall;

accidents associated with the operation of large open pit mining and rock transportation equipment;

accidents associated with the preparation and ignition of large-scale open pit blasting operations;

deterioration of production quality due to weather; and

hazards associated with the disposal of mineralized waste water, such as groundwater and waterway contamination.

Hazards associated with our underground mining operations include but are not limited to:

underground fires and explosions, including those caused by flammable gas;

cave-ins or ground falls;

discharges of gases and toxic chemicals;

flooding;

sinkhole formation and ground subsidence; and

other accidents and conditions resulting from drilling, blasting and removing and processing material from an underground mine.

We are at risk of experiencing any and all of these hazards. The occurrence of any of these hazards could delay production, increase production costs, result in injury to persons and damage to property, as well as liability for us. The liabilities resulting from any of these risks may not be adequately covered by insurance, and we may incur significant costs that could have a material adverse effect upon our business, results of operations and financial condition.

More stringent environmental laws and regulations or more stringent enforcement of existing environmental laws and regulations in the jurisdictions where we operate may have a significant negative effect on our operating results.

Our operations and properties are subject to environmental, worker protection and industrial safety and other laws and regulations in the jurisdictions in which we operate. For instance, our operations generate large amounts of pollutants and waste, some of which are hazardous, such as benzapiren, sulfur oxide, sulfuric acid, nitrogen ammonium, sulfates, nitrites and phenicols. Some of our operations result in the creation of hazardous sludges, including sludges containing base elements such as chromium, copper, nickel, mercury and zinc. The creation, storage and disposal of such hazardous waste is subject to environmental regulations, including some requiring the clean-up of contamination and

Edgar Filing: DATA I/O CORP - Form SC 13D/A

reclamation, such as requirements for cleaning up highly hazardous waste oil and iron slag. In addition, pollution risks and related clean-up costs are often impossible to assess unless environmental audits have been performed and the extent of liability under environmental laws is clearly determinable.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Generally, there is a greater awareness in Russia of damage caused to the environment by industry than existed during the Soviet era. At the same time, environmental legislation in Russia is generally weaker and less stringently enforced than in the E.U. or the United States. However, recent Russian government initiatives indicate that Russia will introduce new water, air and soil quality standards and increase its monitoring and fines for noncompliance with environmental rules. In addition, we are currently assessing whether our Romanian operations will face higher environmental compliance costs due to the integration of Romania into the E.U. See note 26(c) to our consolidated financial statements in "Item 18. Financial Statements."

Based on the current regulatory environment in Russia and elsewhere where we conduct our operations, as of December 31, 2007, we have not created any reserves for environmental liabilities and compliance costs, other than an accrual in the amount of \$71.3 million for asset retirement obligations, consistent with U.S. GAAP requirements. Any change in this regulatory environment could result in actual costs and liabilities for which we have not provided.

Also, in the course, or as a result, of an environmental investigation by Russian governmental authorities, courts can issue decisions requiring part or all of the production at a facility that has violated environmental standards to halt for a 90-day period. We have been cited in Russia for various violations of environmental regulations in the recent past, including during the 2007 financial year, and we have paid certain fines levied by regulatory authorities in connection with these infractions. Though our production facilities have not been ordered to suspend operations due to environmental violations during the respective periods since we acquired or established them, there are no assurances that environmental protection authorities will not seek such suspensions in the future. In the event that production at any of our facilities is partially or wholly suspended due to this type of sanction, our business could suffer and our operating results could be negatively affected.

In addition, we are generally not indemnified against environmental liabilities or any required land reclamation expenses of our acquired businesses that arise from activities that occurred prior to our acquisition of such businesses. See " Our business strategy envisions additional acquisitions and continued integration, and we may fail to identify suitable targets, acquire them on acceptable terms, identify all potential liabilities associated with them or successfully integrate them into our group."

Our business could be adversely affected if we fail to obtain or renew necessary licenses and permits or fail to comply with the terms of our licenses and permits.

Our business depends on the continuing validity of our licenses and the issuance of new licenses and our compliance with the terms thereof, including subsoil licenses for our mining operations. Regulatory authorities exercise considerable discretion in the timing of license issuance, renewal of licenses and monitoring licensees' compliance with license terms. In particular, subsoil licenses and related agreements typically contain certain environmental, safety and production commitments. See "Item 4. Information on the Company Regulatory Matters Subsoil licensing Maintenance and termination of licenses." If regulatory authorities determine that we have violated the terms of our licenses, it could lead to suspension or termination of our licenses, and to administrative, civil and criminal liability. In addition, requirements imposed by relevant authorities may be costly to implement and result in delays in production. See "Item 4. Information on the Company Mining Business Mineral reserves." Accordingly, these factors may seriously affect our ability to operate our business and realize our reserves.

Deficiencies in the legal framework relating to subsoil licensing subject our licenses to the risk of governmental challenges and, if our licenses are suspended or terminated, we may be unable to realize our reserves, which could materially adversely affect our business and results of operations.

Most of the existing subsoil licenses in Russia date from the Soviet era. During the period between the dissolution of the Soviet Union in August 1991 and the enactment of the first post-Soviet subsoil licensing law in the summer of 1992, the status of subsoil licenses and Soviet-era mining operations was unclear, as was the status of the regulatory authority governing such operations. The Russian government enacted the Procedure for Subsoil Use Licensing on July 15, 1992, which came into effect on August 20, 1992 (the "Licensing Regulation"). As was common with legislation of this time, the Licensing Regulation was passed without adequate consideration of transition provisions and contained numerous gaps. In an effort to address the problems in the Licensing Regulation, the Ministry of Natural Resources (the "MNR") issued ministerial acts and instructions that attempted to clarify and, in some cases, modify the Licensing Regulation. Many of these acts contradicted the law and were beyond the scope of the MNR's authority, but subsoil licensees had no option but to deal with the MNR in relation to subsoil issues and comply with its ministerial acts and instructions. Thus, it is possible that licenses applied for and/or issued in reliance on the MNR's acts and instructions could be challenged by the prosecutor general's office as being invalid. In particular, deficiencies of this nature subject subsoil licensees to selective and arbitrary governmental claims.

Legislation on subsoil rights still remains internally inconsistent and vague, and the regulators' acts and instructions are often arguably inconsistent with legislation. Subsoil licensees thus continue to face the situation where both failing to comply with the regulator's acts and instructions and choosing to comply with them places them at the risk of being subject to arbitrary governmental claims, whether by the regulator or the prosecutor general's office. Our competitors may also seek to deny our rights to develop certain natural resource deposits by challenging our compliance with tender rules and procedures or compliance with license terms.

A provision that a license may be suspended or terminated if the licensee does not comply with the "significant" or "material" terms of a license is an example of such a deficiency in the legislation. However, the MNR (including its successor agency since May 13, 2008, the Ministry of Natural Resources and Ecology) has not issued any interpretive guidance on the meaning of these terms. Similarly, under Russia's civil law system, court decisions on the meaning of these terms do not have any precedential value for future cases and, in any event, court decisions in this regard have been inconsistent. These deficiencies result in the regulatory authorities, prosecutors and courts having significant discretion over enforcement and interpretation of the law, which may be used to challenge our subsoil rights selectively and arbitrarily.

Moreover, during the tumultuous period of the transformation of the Russian planned economy into a free market economy in the 1990s, documentation relating to subsoil licenses was not properly maintained in accordance with administrative requirements and, in many cases, was lost or destroyed. Thus, in many cases, although it may be clearly evident that a particular enterprise has mined a licensed subsoil area for decades, the historical documentation relating to their subsoil licenses may not be complete. If, through governmental or other challenges, our licenses are suspended or terminated we would be unable to realize our reserves, which could materially adversely affect our business and results of operations.

Our controlling shareholder has the ability to take actions that may conflict with the interests of the holders of our Shares.

Our Chief Executive Officer, Igor V. Zyuzin, directly and indirectly owns approximately 69.87% of our common shares and may also acquire additional shares from time to time. Except in certain cases as provided by the Federal Law "On Joint-Stock Companies," dated December 26, 1995, as amended

(the "Joint-Stock Companies Law"), resolutions at a shareholders' meeting are adopted by a simple majority in a meeting at which shareholders holding more than half of the voting shares are present or represented. Accordingly, Mr. Zyuzin has the power to control the outcome of most matters to be decided by vote at a shareholders' meeting and can control the appointment of the majority of directors and the removal of all of the elected directors. In addition, our controlling shareholder is likely to be able to take actions which require a three-quarters supermajority vote of shares represented at such a shareholders' meeting, such as amendments to our charter, reorganization, significant sales of assets and other major transactions. Thus, our controlling shareholder can take actions that may conflict with the interests of other holders of our Shares.

Our competitive position and future prospects depend on our senior managers and other key personnel.

Our ability to maintain our competitive position and to implement our business strategy is dependent to a large degree on the services of our senior management team and other key personnel, particularly Mr. Zyuzin, our Chief Executive Officer and controlling shareholder. See " Our controlling shareholder has the ability to take actions that may conflict with the interests of the holders of our Shares" and "Item 6. Directors, Senior Management and Employees Directors and Executive Officers." Mr. Zyuzin has provided and continues to provide strategic direction and leadership to us.

Moreover, competition in Russia, and in the other countries where we operate, for personnel with relevant expertise is intense due to the small number of qualified individuals and, as a result, we attempt to structure our compensation packages in a manner consistent with the evolving standards of the Russian labor market. We are not insured against the adverse effects to our business resulting from the loss or dismissal of our key personnel. The loss or decline in the services of members of our senior management team or an inability to attract, retain and motivate qualified key personnel could have a material adverse effect on our business, financial condition and results of operations.

Regulation by the Federal Antimonopoly Service could lead to sanctions with respect to the subsidiaries we have acquired or established, our prices or our sales volumes.

Our business has grown substantially through the acquisition and founding of companies, many of which required the prior approval or subsequent notification of the Russian Federal Antimonopoly Service (the "FAS") or its predecessor agencies. In part, relevant legislation restricts the acquisition or founding of companies by groups of companies or individuals acting in concert without this approval or notification. This legislation is vague in certain parts and subject to varying interpretations. If the FAS were to conclude that an acquisition or the creation of a new company was done in contravention of applicable legislation and that competition has been limited as a result, it could seek redress, including invalidating the transactions that led to the violation of competition laws, obliging the acquirer to perform activities to restore competition, and seeking the dissolution of the company operating in contravention of antimonopoly legislation. Any of these actions could materially adversely affect our business and our results of operations.

As of April 21, 2008, eight of our subsidiaries were included by the FAS in its register of companies controlling more than 35% of a specific market, including:

Beloretsk Metallurgical Plant as controlling 100% of the market for local telephony services in the city of Beloretsk;

Chelyabinsk Metallurgical Plant OAO ("Chelyabinsk Metallurgical Plant") as controlling more than 65% of the market for forgings made of stainless steel ingots in the Russian market; also as controlling more than 65% of the heat energy market in the Metallurgical municipal district of the city of Chelyabinsk;

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Southern Urals Nickel Plant OAO ("Southern Urals Nickel Plant") as controlling more than 65% of the market for nickel in sulfate and hydroxide in the Russian Federation;

Izhstal OAO ("Izhstal") as controlling more than 65% of the market for graded high-speed steel and its substitute and the market for small shaped graded high-speed steel in the Russian Federation;

Vyartsilya Metal Products Plant ZAO ("Vyartsilya Metal Products Plant") as controlling more than 65% of the market of railroad transportation of cargo for third parties and companies on the track section from Vyartsilya Village to Vyartsilya Station;

Southern Kuzbass Power Sales Company OAO ("Southern Kuzbass Power Sales Company") as controlling more than 50% of the electricity trading market in Kemerovo region;

Mechel-Energo OOO ("Mechel-Energo") as controlling more than 50% of the market for the trading of electricity in the cities of Mezhdurechensk, Myski and Novokuznetsk; and

Yakutugol, including its subsidiaries Dzhebariki-Khaya Mine OAO ("Dzhebariki-Khaya Mine") and Kangalassk Open Pit Mine OAO ("Kangalassk Open Pit Mine") as controlling more than 65% of the coal market of the Sakha Republic (an administrative region of Russia in eastern Siberia, also known as Yakutia) and as holding a dominant market position as the sole supplier of Far East Generating Company OAO, a power plant designed to consume only the type of coal produced by Yakutugol and its subsidiaries.

Inclusion of our subsidiaries in the register of companies controlling more than 35% of a specific market, as well as the classification of us or any of our subsidiaries as monopolists or persons holding a dominant market position, does not by itself restrict our current activities or the activities of these subsidiaries. However, these subsidiaries may be subject to additional FAS oversight by reason of their having been deemed to have a dominant market position.

On April 14, 2008, the FAS issued a directive ordering Yakutugol, Southern Kuzbass Coal Company and Mechel-Invest OOO ("Mechel-Invest"), as a group of companies holding a dominant position on the Russian coking coal market, to fulfill the following requirements:

to support certain production volumes and product lines;

to provide, to the extent possible, equal supply terms to all customers without discrimination against companies not forming part of the Mechel-Invest group of companies;

not to restrict other companies from supplying coking coal to the same geographical area of operations; and

to notify the FAS prior to any increase in domestic prices of coking coal, steam coal and coking coal concentrate, if such increase amounts to more than 10% of the relevant price used 180 days before the date such increase is planned to take place, with submission to the FAS of the financial and economic reasoning for the planned increase of prices.

Additionally, on March 6, 2008 we received from the FAS two directives related to the same subsidiaries, with one of them also being addressed to Elgaugol. These directives contain requirements similar to the ones described above, except for the requirement for prior notification of contemplated price increases. Under these two directives the companies are required to notify the FAS within ten days of a price increase exceeding 15% as compared to the prices used a year prior to such price increase.

Furthermore, in connection with the establishment of Mechel-Mining OAO, the subsidiary into which certain mining assets are being consolidated, Mechel received a directive from the FAS dated May 13, 2008, which contains requirements as to the activities of Mechel, Southern Kuzbass Coal

Company and Korshunov Mining Plant OAO ("Korshunov Mining Plant"), which have been deemed by FAS to be a group of companies holding a dominant position on the Russian coking coal market. The requirements repeat those described above pursuant to the directive issued to Yakutugol, Southern Kuzbass Coal Company and Mechel-Invest on April 14, 2008.

Upon being notified of a planned price increase, the FAS may direct a less substantial price increase to be implemented instead of the planned increase, although to our knowledge FAS has not taken such action in the past.

The FAS may treat a failure by one of our subsidiaries to carry out the FAS's directives as an abuse of such subsidiary's dominant market position. In the event we are deemed to be abusive of our dominant market position, the FAS may impose certain restrictions and fines with respect to our subsidiaries, which could have an adverse impact upon the operations of these subsidiaries and materially adversely affect our business and results of operations.

In the event that the minority shareholders of our subsidiaries were to successfully challenge past interested party transactions or do not approve interested party transactions in the future, we could be limited in our operational flexibility.

We own less than 100% of the equity interests in some of our subsidiaries. In addition, certain of our wholly owned subsidiaries have had other shareholders in the past. We and our subsidiaries in the past have carried out, and continue to carry out, transactions among our companies and affiliates, as well as transactions with other parties which may be considered to be "interested party transactions" under Russian law, requiring intragroup approval by disinterested directors, disinterested independent directors or disinterested shareholders depending on the nature of the transaction and the parties involved. See "Item 10. Additional Information Charter and Certain Requirements of Russian Legislation Interested Party Transactions." The provisions of Russian law defining which transactions must be approved as "interested party transactions" are subject to different interpretations, and these transactions may not always have been properly approved. We cannot make any assurances that our and our subsidiaries' applications of these concepts will not be subject to challenge by former and current shareholders. Any such challenges, if successful, could result in the invalidation of transactions, which could have a material adverse effect on our business, financial condition, results of operations or prospects.

In addition, Russian law requires a three-quarters majority vote of the holders of voting stock present at a shareholders' meeting to approve certain transactions and other matters, including, for example, charter amendments, major transactions involving assets in excess of 50% of the assets of the company, repurchase by the company of shares and certain share issuances. In some cases, minority shareholders may not approve interested party transactions requiring their approval or other matters requiring approval of minority shareholders or supermajority approval. In the event that these minority shareholders were to challenge successfully past interested party transactions, or do not approve interested party transactions or other matters in the future, we could be limited in our operational flexibility and our business, financial condition, results of operations or prospects could be materially adversely affected.

In the event certain minority shareholder lawsuits are resolved against us, our financial condition and results of operations could be materially adversely affected.

Russian law does not protect us against and does not allow us to include in our charter protections against greenmail and other similar actions by minority shareholders. For example, minority shareholders holding as little as a single share in a company have standing under Russian law to bring claims against the company. These features of Russian corporate law are often abused by minority shareholders, who can bring claims in local courts seeking injunctions and other relief for which, as a

practical matter, we may not receive notice. Any such actions by minority shareholders, if resolved against us, could have a material adverse effect on our business, results of operations and financial condition.

Our existing arrangements with trade unions may not be renewable on terms favorable to us, and our operations could be materially adversely affected by a worsening of labor relations in the future.

As of December 31, 2007, approximately 75% of our employees were represented by trade unions. Although we have not experienced any business interruption at any of our companies as a result of labor disputes from the dates of their respective acquisition by us and we consider our relations with our employees to be good, under Russian law unions have the legal right to strike and other Russian companies with large union representation have been recently affected by interruptions due to strikes, lockouts or delays in renegotiations of collective bargaining agreements. Our businesses could also be affected by similar events if our relations with our labor force and trade unions worsen in the future. If we are unable to renew our collective bargaining agreements on comparable terms upon their expiry, or if the negotiations of these agreements are highly contentious and employees are dissatisfied at the outcome, our business and results of operations could be materially adversely affected.

We do not carry the types of insurance coverage customary in more economically developed countries for a business of our size and nature, and a significant event could result in substantial property loss and inability to rebuild in a timely manner or at all.

The insurance industry is still developing in Russia, and many forms of insurance protection common in more economically developed countries are not available in Russia on comparable terms, including coverage for business interruption. At present, our facilities are not insured, and we have no coverage for business interruption or loss of key management personnel or for third-party liability, other than customary insurance coverage with respect to our international trading operations and sales. In the event that a significant event were to affect one of our facilities, we could experience substantial property loss and significant disruptions in our production capacity, for which we would not be compensated. For example, if substantial production capacity were lost at our Chelyabinsk Metallurgical Plant, which is our primary steel production facility, we would not be able to replace a substantial portion of this capacity with capacity from our other plants, potentially resulting in the interruption of the production of a number of our products. Additionally, depending on the severity of the property damage, we may not be able to rebuild damaged property in a timely manner or at all. We do not maintain separate funds or otherwise set aside reserves for these types of events. Any such loss or third-party claim for damages may have a material adverse effect on our business, results of operations and financial condition.

If transactions, corporate decisions or other actions of members of our group and their predecessors-in-interest were to be challenged on the basis of noncompliance with applicable legal requirements, the remedies in the event of any successful challenge could include the invalidation of such transactions, corporate decisions or other actions or the imposition of other liabilities on such group members.

Members of our group, or their predecessors-in-interest at different times, have taken a variety of actions relating to share issuances, share disposals and acquisitions, mandatory buy-out offers, valuation of property, interested party transactions, major transactions, decisions to transfer licenses, meetings of our group members' governing bodies, other corporate matters and anti-monopoly issues that, if successfully challenged on the basis of noncompliance with applicable legal requirements by competent state authorities, counterparties in such transactions or shareholders of the relevant members of our group or their predecessors-in-interest, could result in the invalidation of such actions, transactions and our corporate decisions, restrictions on voting rights or the imposition of other liabilities. Because

applicable provisions of Russian law are subject to many different interpretations, we may not be able to defend successfully any challenge brought against such actions, decisions or transactions, and the invalidation of any of them or imposition of any such liability may, individually or in the aggregate, have a material adverse effect on our business, financial condition and results of operations.

We could be materially adversely affected if we do not comply with our loan agreements.

The terms of most of our loan agreements under which we or our subsidiaries are borrowers contain various representations, undertakings and provisions regarding events of default, including those related to current litigations and other proceedings, indebtedness, restrictions on payment of dividends, maintenance of certain financial ratios and compliance with applicable laws and regulations. Additionally, many of our loan agreements contain cross-default provisions whereby an event of default under one agreement may in and of itself result in a cross-default under other agreements. Furthermore, according to the terms of such agreements, certain of our actions aimed at developing our business and pursuing our strategic objectives, such as acquisitions, dispositions of assets, restructuring, investments into certain of our subsidiaries and others, require prior consent from the respective lenders.

If we fail to comply with the respective provisions contained in any of our loan agreements, including failure to obtain prior consent of lenders for certain actions, such failure could be deemed to be an event of default which could result in, among other things, acceleration of repayment of principal and interest under the relevant loan agreement and any other loan agreement under which a default on such instrument would trigger a cross-default, reduced opportunities for future borrowing, liability for damages, inability to further develop our business and pursue our strategic objectives or review and/or downgrade of our credit ratings, any of which could have a material adverse effect on our business, financial condition, results of operations and prospects.

Risks Relating to Our Shares and the Trading Market

Because the depositary may be considered the beneficial holder of the shares underlying the ADSs and GDSs, these shares may be arrested or seized in legal proceedings in Russia against the depositary.

Because a court interpreting Russian law may not recognize ADS and GDS holders as beneficial owners of the underlying shares, it is possible that holders of ADSs and GDSs could lose all their rights to those shares if the depositary's assets in Russia are seized or arrested. In that case, holders of ADSs and GDSs would lose their entire investment.

A court interpreting Russian law may treat the depositary as the beneficial owner of the shares underlying the ADSs and GDSs. This is different from the way other jurisdictions treat ADSs and GDSs. In the United States, although shares may be held in the depositary's name or to its order, making it a "legal" owner of the shares, the ADS and GDS holders are the "beneficial," or real, owners. In U.S. courts, an action against the depositary would not result in the beneficial owners losing their shares. Russian law does not make the same distinction between legal and beneficial ownership, and it may only recognize the rights of the depositary in whose name the shares are held, not the rights of ADS and GDS holders, to the underlying shares. Thus, in proceedings brought against a depositary, whether or not related to shares underlying ADSs and GDSs, Russian courts may treat those underlying shares as the assets of the depositary, open to seizure or arrest.

Voting rights with respect to the shares represented by our ADSs and GDSs are limited by the terms of the deposit agreements for the ADSs and GDSs and relevant requirements of Russian law.

ADS and GDS holders have no direct voting rights with respect to the shares represented by the ADSs and GDSs. They exercise voting rights with respect to the shares represented by ADSs and GDSs only in accordance with the provisions of the relevant deposit agreement relating to the ADSs and

Edgar Filing: DATA I/O CORP - Form SC 13D/A

GDSs and relevant requirements of Russian law. Therefore, there are practical limitations upon the ability of ADS and GDS holders to exercise their voting rights due to the additional procedural steps involved in communicating with them. For example, the Joint-Stock Companies Law and our charter require us to notify shareholders no less than 30 days prior to the date of any meeting and at least 70 days prior to the date of an extraordinary meeting to elect our Board of Directors upon publication of the notice in the Russian official newspaper *Rossiyskaya Gazeta*. Our common shareholders will receive notice directly from us and will be able to exercise their voting rights by either attending the meeting in person or voting by power of attorney.

ADS and GDS holders, by comparison, will not receive notice directly from us. Rather, in accordance with the deposit agreement, we will provide the notice to the depository. The depository has in turn undertaken, as soon as practicable thereafter, to mail to ADS and GDS holders notice of such meeting, copies of voting materials (if and as received by the depository from us) and a statement as to the manner in which instructions may be given by ADS and GDS holders. To exercise their voting rights, ADS and GDS holders must then instruct the depository how to vote their shares. Because of this extra procedural step involving the depository, the process for exercising voting rights may take longer for ADS and GDS holders than for holders of shares. ADSs and GDSs for which the respective depository does not receive timely voting instructions will not be voted at any meeting.

In addition, although securities regulations expressly permit the depository to split the votes with respect to the shares underlying the ADSs or GDSs, as the case may be, in accordance with instructions from ADS or GDS holders, there is little court or regulatory guidance on the application of such regulations, and the depository may choose to refrain from voting at all unless it receives instructions from all ADS or GDS holders to vote the shares in the same manner. Holders of ADSs and GDSs may thus have significant difficulty in exercising voting rights with respect to the shares underlying the ADSs or GDSs. There can be no assurance that holders and beneficial owners of ADSs or GDSs will (1) receive notice of shareholder meetings to enable the timely return of voting instructions to the depository, (2) receive notice to enable the timely cancellation of ADSs and GDSs in respect of shareholder actions or (3) be given the benefit of dissenting or minority shareholders' rights in respect of an event or action in which the holder or beneficial owner has voted against, abstained from voting or not given voting instructions.

The price of our Shares may be highly volatile.

The trading prices of our Shares may be subject to wide fluctuations in response to many factors, including:

fluctuations in our operating results and those of other Russian and international mining, steel, and power companies;

fluctuations in national and industry growth rates;

actual or anticipated announcements of technical innovations or new products or services by us or our competitors;

changes in governmental legislation or regulation;

general economic conditions within our business sector or in Russia; or

extreme price and volume fluctuations on the Russian or other emerging market stock exchanges and stock exchanges in developed markets.

ADS and GDS holders may be unable to repatriate their earnings.

Dividends that we may pay in the future on the shares represented by the ADSs and GDSs are calculated in Russian rubles and may be declared and paid to the depository in rubles. Such dividends

will be converted into U.S. dollars by the depositary and distributed to holders of ADSs and GDSs, net of the depositary's fees and expenses. The ability to convert rubles into U.S. dollars is subject to the availability of U.S. dollars in the currency markets. Although there is a developing market for the conversion of rubles into U.S. dollars, including the interbank currency exchange and over-the-counter and currency futures markets, the further development of this market is not guaranteed.

ADS and GDS holders may not be able to benefit from the United States-Russia income tax treaty.

Under Russian law, dividends paid to a non-resident holder of the shares generally will be subject to Russian withholding tax at a rate of 15%.

Russian tax rules applicable to the holders of the ADSs and GDSs are characterized by significant uncertainties. The Ministry of Finance of the Russian Federation has expressed its opinion in private rulings that holders of depositary receipts should be treated as the beneficial owners of the dividends paid on underlying shares for the purposes of double tax treaty provisions applicable to taxation of dividend income from the underlying shares, provided that the tax treaty residence of the holders of the depositary receipts is duly confirmed. However, the Russian tax authorities have not provided official, generally applicable guidance addressing how an ADS or GDS holder should demonstrate its beneficial ownership in underlying shares. As Russian tax legislation does not specify the form of the documents confirming the status of the beneficiary shareholder in the foreign jurisdiction (e.g., U.S. permanent resident status), the Russian tax authorities have stated that the documents confirming the permanent residence of a foreign company can be documents in any format provided they are officially consularized or apostilled.

Until the Russian tax authorities clarify whether it is permitted under Russian law to withhold Russian withholding tax in respect of dividends a company pays to the depositary at a lower rate than the domestic rate applicable to such payments (currently 15%), we intend to withhold Russian withholding tax at the domestic rate applicable to such dividends, regardless of whether the Depositary (the legal owner of the shares) or an ADS or GDS holder would be entitled to reduced rates of Russian withholding tax under the relevant income tax treaty if it were the beneficial owner of the dividends for purposes of that treaty. Although non-resident ADS and GDS holders may apply for a refund of a portion of the amount so withheld by us under the relevant income tax treaty, no assurance can be made that the Russian tax authorities will grant any refunds. See "Item 10. Additional Information Taxation Russian Income and Withholding Tax Considerations" for additional information.

Capital gains from the sale of ADSs and GDSs may be subject to Russian income tax.

Under Russian tax legislation, gains realized by non-resident legal entities or organizations from the disposition of Russian shares and securities, as well as financial instruments derived from such shares, such as the ADSs and GDSs, may be subject to Russian profits tax or withholding income tax if immovable property located in Russia constitutes more than 50% of our assets. However, no procedural mechanism currently exists to withhold and remit this tax with respect to sales made to persons other than Russian companies and foreign companies with a registered permanent establishment in Russia. Gains arising from the disposition on foreign stock exchanges of the foregoing types of securities listed on these exchanges are not subject to taxation in Russia.

Gains arising from the disposition of the foregoing types of securities and derivatives outside of Russia by U.S. holders who are individuals not resident in Russia for tax purposes will not be considered Russian source income and will not be taxable in Russia. Gains arising from disposition of the foregoing types of securities and derivatives in Russia by U.S. holders who are individuals not resident in Russia for tax purposes may be subject to tax either at the source in Russia or based on an annual tax return, which they may be required to submit with the Russian tax authorities.

Holders of our ADSs and GDSs may have limited recourse against us and our directors and executive officers because we generally conduct our operations outside the United States and most of our directors and all of our executive officers reside outside the United States.

Our presence outside the United States may limit our ADS and GDS holders' legal recourse against us. Mechel is incorporated under the laws of the Russian Federation. Most of our directors and all of our executive officers reside outside the United States, principally in Russia. All or a substantial portion of our assets and the assets of most of our directors and executive officers are located outside the United States. As a result, holders of our ADSs and GDSs may not be able to effect service of process within the United States upon us or our directors and executive officers or to enforce in a U.S. court a judgment obtained against us or our directors and executive officers in jurisdictions outside the United States, including actions under the civil liability provisions of U.S. securities laws. In addition, it may be difficult for holders of ADSs and GDSs to enforce, in original actions brought in courts in jurisdictions outside the United States, liabilities predicated upon U.S. securities laws.

There is no treaty between the United States and the Russian Federation providing for reciprocal recognition and enforcement of foreign court judgments in civil and commercial matters. These limitations may deprive investors of effective legal recourse for claims related to investments in the ADSs and GDSs. The deposit agreement provides for actions brought by any party thereto against us to be settled by arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association, provided that any action under the U.S. federal securities laws or the rules or regulations promulgated thereunder may, but need not, be submitted to arbitration. The Russian Federation is a party to the United Nations (New York) Convention on the Recognition and Enforcement of Foreign Arbitral Awards, but it may be difficult to enforce arbitral awards in the Russian Federation due to a number of factors, including the inexperience of Russian courts in international commercial transactions, official and unofficial political resistance to enforcement of awards against Russian companies in favor of foreign investors and Russian courts' inability to enforce such orders.

Risks Relating to the Russian Federation and Other Countries Where We Operate

We have not independently verified information we have sourced from third parties.

We have sourced certain information contained in this document from third parties, including private companies and Russian government agencies, and we have relied on the accuracy of this information without independent verification. The official data published by Russian federal, regional and local governments may be substantially less complete or researched than those of Western countries. Official statistics may also be produced on different bases than those used in Western countries.

Emerging markets such as Russia are subject to greater risks than more developed markets, and financial turmoil in any emerging market could disrupt our business, as well as cause the price of our Shares to suffer.

Investors in emerging markets such as the Russian Federation should be aware that these markets are subject to greater risk than more developed markets, including in some cases significant legal, economic and political risks. Investors should also note that emerging economies such as the economy of the Russian Federation are subject to rapid change and that the information set out herein may become outdated relatively quickly. Accordingly, investors should exercise particular care in evaluating the risks involved and must decide for themselves whether, in light of those risks, their investment is appropriate. Generally, investment in emerging markets is only suitable for sophisticated investors who fully appreciate the significance of the risks involved and investors are urged to consult with their own legal and financial advisers before making an investment in the Shares.

Economic Risks

Economic instability in Russia could adversely affect our business and the value of the Shares.

Since the dissolution of the Soviet Union in the early 1990s, the Russian economy has experienced at various times:

significant declines in gross domestic product;

hyperinflation;

an unstable currency;

high government debt relative to gross domestic product;

a weak banking system providing limited liquidity to domestic enterprises;

high levels of loss-making enterprises that continued to operate due to the lack of effective bankruptcy proceedings;

significant use of barter transactions and illiquid promissory notes to settle commercial transactions;

widespread tax evasion;

growth of a black and gray market economy;

pervasive capital flight;

high levels of corruption and the penetration of organized crime into the economy;

significant increases in unemployment and underemployment; and

the impoverishment of a large portion of the population.

Although Russia has benefited recently from the increase in global commodity prices, providing an increase in disposable income and an increase in consumer spending, the Russian economy has been subject to abrupt downturns in the past. In particular, on August 17, 1998, in the face of a rapidly deteriorating economic situation, the Russian government defaulted on its ruble-denominated securities, the CBR stopped its support of the ruble and a temporary moratorium was imposed on certain foreign currency payments. These actions resulted in an immediate and severe devaluation of the ruble and a sharp increase in the rate of inflation; a substantial decline in the prices of Russian debt and equity securities; and an inability of Russian issuers to raise funds in the international capital markets. These problems were aggravated by a major banking crisis in the Russian banking sector after the events of August 17, 1998 (the "August 1998 Financial Crisis"), as evidenced by the termination of the banking licenses of a number of major Russian banks. This further impaired the ability of the banking sector to act as a consistent source of liquidity to Russian companies and resulted in the losses of bank deposits in some cases.

Recently, the Russian economy has experienced positive trends, such as the increase in the gross domestic product, a relatively stable ruble, strong domestic demand, rising real wages and a reduced rate of inflation. In addition, the Russian government has experienced a budget surplus in recent years and has accumulated a significant "stabilization fund" and the CBR has considerable hard currency reserves. However, these trends may not continue or may be abruptly reversed in the future.

The Russian banking system is still developing, and another banking crisis could place severe liquidity constraints on our business.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Since the August 1998 Financial Crisis, the Russian banking sector has steadily developed, as demonstrated by the growing presence of prominent international banks in Russia and emergence of a

small number of creditworthy Russian banks. However, many Russian banks currently do not meet international banking standards, and the transparency of the Russian banking sector in some respects still lags far behind internationally accepted norms. Certain banks do not follow existing CBR regulations with respect to lending criteria, credit quality, loan loss reserves or diversification of exposure, although in recent years, the CBR has increased its supervision of banks and has suspended a number of bank licenses for violation of its banking regulations. Furthermore, in Russia, bank deposits made by corporate entities generally are not insured.

Recently, there has been a rapid increase in lending by Russian banks, which many believe has been accompanied by a deterioration in the credit quality of the borrowers. In addition, a robust domestic corporate debt market has led to Russian banks increasingly holding large amounts of Russian corporate ruble bonds in their portfolios, which is further deteriorating the risk profile of Russian bank assets. In addition, since Russian banks generally have lower capital adequacy requirements, the banking sector could be more susceptible to market downturns or economic slowdowns, including due to Russian corporate defaults that may occur during any such market downturn or economic slowdown. If a banking crisis were to occur, Russian companies would be subject to severe liquidity constraints as Russian banks would have inadequate capital available to lend to such companies due to the limited supply of domestic savings and the withdrawal of foreign funding sources that would occur during such a crisis.

There is currently a limited number of sufficiently creditworthy Russian banks. We hold the bulk of our excess ruble and foreign currency cash in Russian banks, including subsidiaries of foreign banks. There are few, if any, safe ruble-denominated instruments in which we may invest our excess ruble cash. Another banking crisis or the bankruptcy or insolvency of the banks from which we receive or with which we hold our funds could result in the loss of our deposits or affect our ability to complete banking transactions in Russia, which could have a material adverse effect on our business, financial condition and results of operations.

The infrastructure in Russia needs significant improvement and investment, which could disrupt normal business activity.

The infrastructure in Russia largely dates back to the Soviet era and has not been adequately funded and maintained over the past decade. Particularly affected are the rail and road networks, power generation and transmission systems, communication systems and building stock. The deterioration of the infrastructure in Russia harms the national economy, disrupts the transportation of goods and supplies, adds costs to doing business and can interrupt business operations. These factors could have a material adverse effect on our business and results of operations.

The Russian economy and the value of the Shares could be materially adversely affected by fluctuations in the global economy.

The U.S. credit markets and the global capital markets have recently experienced liquidity disruptions. See "Risks Relating to Our Business and Industry We will require a significant amount of cash to fund our capital improvements program." The Russian economy is vulnerable to these global market downturns and economic slowdowns. As has happened in the past, financial problems or an increase in the perceived risks associated with investing in emerging economies could dampen foreign investment in Russia and Russian businesses could face severe liquidity constraints, further materially adversely affecting the Russian economy. Additionally, because Russia produces and exports large amounts of oil, the Russian economy is especially vulnerable to the price of oil on the world market and a decline in the price of oil could slow or disrupt the Russian economy or undermine the value of the ruble against foreign currencies. Russia is also one of the world's largest producers and exporters of metal products and its economy is vulnerable to fluctuations in world commodity prices and the imposition of tariffs and/or antidumping measures by the United States, the E.U. or by other principal

export markets. As many of the factors that affect the Russian economy affect our business and the business of many of our domestic customers, we could be materially adversely affected by a prolonged downturn affecting the Russian economy.

Political and Social Risks

Political and governmental instability could materially adversely affect our business, financial condition, results of operations and prospects and the value of the Shares.

Since 1991, Russia has sought to transform itself from a one-party state with a centrally-planned economy to a democracy with a market economy. As a result of the sweeping nature of the reforms, and the failure of some of them, the Russian political system remains vulnerable to popular dissatisfaction, including dissatisfaction with the results of privatizations in the 1990s, as well as to demands for autonomy from particular regional and ethnic groups.

Current and future changes in the government, conflicts between federal government and regional or local authorities, major policy shifts or lack of consensus between various branches of the government and powerful economic groups could disrupt or reverse economic and regulatory reforms. Any disruption or reversal of reform policies could lead to political or governmental instability or the occurrence of conflicts among powerful economic groups, resulting in an adverse impact on Russia's economy and investment climate, which could have a material adverse effect on our business, financial condition, results of operations and prospects and the value of our Shares.

Corruption and negative publicity could disrupt our ability to conduct our business.

The local press and international press have reported high levels of corruption in Russia, including the bribery of officials for the purpose of initiating investigations by government agencies. Press reports have also described instances in which government officials engaged in selective investigations and prosecutions to further the commercial interests of certain government officials or certain companies or individuals. Additionally, there are reports of the Russian media publishing disparaging articles in return for payment. If officials make unlawful demands to us or if we are accused of involvement in official corruption, it could result in negative publicity, disrupt our ability to conduct our business effectively and thus materially adversely affect our business, financial condition and results of operations and the value of our Shares.

Russia's declining population could materially adversely affect our business, financial condition, results of operations and prospects.

In 2008, Rosstat estimated Russia's population at 142 million, a decline of almost seven million from 1992. The U.S. Census Bureau estimates that Russia's population will decline by 14 million people between 2000 and 2025, while the United Nations Population Division's medium term projection suggests a drop of over 21 million over the same period. Although the birth rate recently reached its highest rate in 15 years, the population continues to decline due to a relatively low birth rate, an aging population and low life expectancy. If the present trend continues without a migration inflow to Russia, the decreasing working population will become a barrier to economic growth around 2015, according to the Economic Forecasting Institute of the Russian Academy of Sciences. A shortage of skilled Russian workers combined with restrictive immigration policies could materially adversely affect our business, financial condition, results of operations and prospects.

Legal Risks and Uncertainties

Weaknesses relating to the Russian legal system and legislation create an uncertain investment climate.

Russia is still developing the legal framework required to support a market economy. The following weaknesses relating to the Russian legal system create an uncertain investment climate and result in risks with respect to our legal and business decisions:

inconsistencies between and among the Constitution, federal law, presidential decrees and governmental, ministerial and local orders, decisions, resolutions and other acts;

conflicting local, regional and federal rules and regulations;

the lack of fully developed corporate and securities laws;

substantial gaps in the regulatory structure due to the delay or absence of implementing legislation;

the relative inexperience of judges in interpreting legislation;

the lack of full independence of the judicial system from commercial, political and nationalistic influences;

difficulty in enforcing court orders;

a high degree of discretion or arbitrariness on the part of governmental authorities; and

still-developing bankruptcy procedures that are subject to abuse.

All of these weaknesses could affect our ability to enforce our rights under our licenses and under our contracts, or to defend ourselves against claims by others. We make no assurances that regulators, judicial authorities or third parties will not challenge our compliance with applicable laws, decrees and regulations.

Failure to comply with existing laws and regulations could result in substantial additional compliance costs or various sanctions which could materially adversely affect our business, financial condition, results of operations and prospects.

Our operations and properties are subject to regulation by various government entities and agencies in connection with obtaining and renewing various licenses, permits, approvals and authorizations, as well as with ongoing compliance with existing laws, regulations and standards. Regulatory authorities exercise considerable discretion in matters of enforcement and interpretation of applicable laws, regulations and standards, the issuance and renewal of licenses, permits, approvals and authorizations and in monitoring licensees' compliance with the terms thereof. Russian authorities have the right to, and frequently do, conduct periodic inspections of our operations and properties throughout the year.

Our failure to comply with existing laws and regulations or to obtain all approvals, authorizations and permits required for our operations or findings of governmental inspections, may result in the imposition of fines or penalties or more severe sanctions including the suspension, amendment or termination of our licenses, permits, approvals and authorizations or in requirements that we cease certain of our business activities, or in criminal and administrative penalties applicable to our officers. Any such decisions, requirements or sanctions could increase our costs and materially adversely affect our business, financial condition, results of operations and prospects.

One or more of our subsidiaries could be forced into liquidation on the basis of formal noncompliance with certain requirements of Russian law, which could materially adversely affect our business, financial condition, results of operations and prospects.

Certain provisions of Russian law may allow a court to order liquidation of a Russian legal entity on the basis of its formal noncompliance with certain requirements during formation, reorganization or during its operation. There have been cases in the past in which formal deficiencies in the establishment process of a Russian legal entity or noncompliance with provisions of Russian law have been used by Russian courts as a basis for liquidation of a legal entity. For example, under Russian corporate law, negative net assets calculated on the basis of Russian accounting standards as of the end of the second or any subsequent year of a company's operation can serve as a basis for a court to order the liquidation of the company upon a claim by governmental authorities. Many Russian companies have negative net assets due to very low historical asset values reflected on their balance sheets prepared in accordance with Russian accounting standards; however, their solvency, *i.e.*, their ability to pay debts as they come due, is not otherwise adversely affected by such negative net assets. Currently, we have two subsidiaries with negative net assets: Kaslinsky Architectural Art Casting Plant OOO and Mechel Recycling OOO ("Mechel Recycling").

If involuntary liquidation were to occur, then we may be forced to reorganize the operations we currently conduct through the affected subsidiaries. Any such liquidation could lead to additional costs, which could materially adversely affect our business, financial condition, results of operations and prospects.

Selective or arbitrary government action could have a material adverse effect on the investment climate in Russia and on our business, financial condition, results of operations and prospects and the value of our Shares.

Governmental and prosecutorial authorities in Russia have a high degree of discretion. Press reports have cited instances of Russian companies and their major shareholders being subjected to government pressure through selective prosecutions of violations of regulations and legislation which are either politically motivated or triggered by competing business groups. Selective or arbitrary government action, if directed at us or our major shareholders, could have a material adverse effect on our business, financial condition, results of operations and prospects and the value of our Shares.

Due to still-developing law and practice related to minority shareholder protection in Russia, the ability of holders of our Shares to bring, or recover in, an action against us may be limited.

In general, minority shareholder protection under Russian law derives from supermajority shareholder approval requirements for certain corporate action, as well as from the ability of a shareholder to demand that the company purchase the shares held by that shareholder if that shareholder voted against or did not participate in voting on certain types of actions. Companies are also required by Russian law to obtain the approval of disinterested shareholders for certain transactions with interested parties. See "Item 10. Additional Information Charter and Certain Requirements of Russian Legislation Description of Capital Stock Rights attaching to common shares." Disclosure and reporting requirements have also been enacted in Russia. Concepts similar to the fiduciary duties of directors and officers to their companies and shareholders are also expected to be further developed in Russian legislation. While these protections are similar to the types of protections available to minority shareholders in U.S. corporations, in practice, the enforcement of these and other protections has been poor.

The supermajority shareholder approval requirement is met by a vote of 75% of all voting shares that are present at a shareholders' meeting. Thus, controlling shareholders owning less than 75% of the outstanding shares of a company may hold 75% or more of the voting power if enough minority shareholders are not present at the meeting. In situations where controlling shareholders effectively

have 75% or more of the voting power at a shareholders' meeting, they are in a position to approve amendments to our charter, reorganization, significant sales of assets and other major transactions, which could be prejudicial to the interests of minority shareholders. See " Risks Relating to Our Business and Industry Our controlling shareholder has the ability to take actions that may conflict with the interests of the holders of our Shares."

Shareholder liability under Russian legislation could cause us to become liable for the obligations of our subsidiaries.

The Civil Code of the Russian Federation, as amended (the "Civil Code"), and the Joint-Stock Companies Law generally provide that shareholders in a Russian joint-stock company are not liable for the obligations of the joint-stock company and bear only the risk of loss of their investment. This may not be the case, however, when one person is capable of determining decisions made by another person or entity. The person or entity capable of determining such decisions is deemed an "effective parent." The person whose decisions are capable of being so determined is deemed an "effective subsidiary." Under the Joint-Stock Companies Law, an effective parent bears joint and several responsibility for transactions concluded by the effective subsidiary in carrying out these decisions if:

this decision-making capability is provided for in the charter of the effective subsidiary or in a contract between the companies; and

the effective parent gives obligatory directions to the effective subsidiary based on the above-mentioned decision-making capability.

In addition, an effective parent is secondarily liable for an effective subsidiary's debts if an effective subsidiary becomes insolvent or bankrupt resulting from the action or inaction of an effective parent. This is the case no matter how the effective parent's ability to determine decisions of the effective subsidiary arises. For example, this liability could arise through ownership of voting securities or by contract. In these instances, other shareholders of the effective subsidiary may claim compensation for the effective subsidiary's losses from the effective parent which caused the effective subsidiary to take action or fail to take action knowing that such action or failure to take action would result in losses. Accordingly, we could be liable in some cases for the debts of our subsidiaries. This liability could have a material adverse effect on our business, results of operations and financial condition.

Shareholder rights provisions under Russian law could result in significant additional obligations on us.

Russian law provides that shareholders that vote against or abstain from voting on certain matters have the right to request that the company redeem their shares at market value in accordance with Russian law. The decisions that trigger this right include:

decisions with respect to a reorganization;

the approval by shareholders of a "major transaction," which, in general terms, is a transaction involving property worth more than 50% of the gross book value of our assets calculated according to Russian accounting standards, regardless of whether the transaction is actually consummated, except for transactions undertaken in the ordinary course of business; and

the amendment of our charter in a manner that limits shareholder rights.

Our (or, as the case may be, our subsidiaries') obligation to purchase shares in these circumstances, which is limited to 10% of our or each of our subsidiary's net assets, as applicable, calculated in accordance with Russian accounting standards at the time the matter at issue is voted upon, could have a material adverse effect on our business, financial condition, results of operations and prospects due to the need to expend cash on such obligatory share purchases.

The lack of a central and rigorously regulated share registration system in Russia may result in improper record ownership of our Shares.

Ownership of Russian joint-stock company shares (or, if the shares are held through a nominee or custodian, then the holding of such nominee or custodian) is determined by entries in a share register and is evidenced by extracts from that register. Currently, there is no central registration system in Russia. Share registers are maintained by the companies themselves or, if a company has more than 50 shareholders or so elects, by licensed registrars located throughout Russia. Regulations have been issued regarding the licensing conditions for such registrars, as well as the procedures to be followed by both companies maintaining their own registers and licensed registrars when performing the functions of registrar. In practice, however, these regulations have not been strictly enforced, and registrars generally have relatively low levels of capitalization and inadequate insurance coverage. Moreover, registrars are not necessarily subject to effective governmental supervision. Due to the lack of a central and rigorously regulated share registration system in Russia, transactions in respect of a company's shares could be improperly or inaccurately recorded, and share registration could be lost through fraud, negligence, official and unofficial governmental actions or oversight by registrars incapable of compensating shareholders for their misconduct. This creates risks of loss not normally associated with investments in other securities markets. Further, the depositary, under the terms of the agreements governing the deposit of our ADSs and GDSs, will not be liable for the unavailability of shares or for the failure to make any distribution of cash or property with respect thereto due to the unavailability of the shares. See "Item 10. Additional Information Charter and Certain Requirements of Russian Legislation Description of Capital Stock Registration and transfer of shares."

Characteristics of and changes in the Russian tax system could materially adversely affect our business, financial condition, results of operations and prospects and the value of the Shares.

Generally, Russian companies are subject to numerous taxes. These taxes include, among others:

profits tax;

value-added tax, or VAT;

unified social tax;

mineral extraction tax; and

property and land taxes.

Laws related to these taxes have been in force for a short period relative to tax laws in more developed market economies and few precedents with regard to the interpretation of these laws have been established. Global tax reforms commenced in 1999 with the introduction of Part One of the Tax Code of the Russian Federation, as amended (the "Tax Code"), which sets general taxation guidelines. Since then, Russia has been in the process of replacing legislation regulating the application of major taxes such as corporate profits tax, VAT and property tax with new chapters of the Tax Code.

In practice, the Russian tax authorities generally interpret the tax laws in ways that rarely favor taxpayers, who often have to resort to court proceedings to defend their position against the tax authorities. Recent events within the Russian Federation suggest that the tax authorities may be taking a more assertive position in their interpretations of the legislation and assessments. Differing interpretations of tax regulations exist both among and within government ministries and organizations at the federal, regional and local levels, creating uncertainties and inconsistent enforcement. Tax declarations, together with related documentation such as customs declarations, are subject to review and investigation by a number of authorities, each of which may impose severe fines, penalties and interest charges. Generally, in an audit, taxpayers are subject to inspection with respect to the three calendar years which immediately preceded the year in which the audit is carried out. Previous audits do not completely exclude subsequent claims relating to the audited period because Russian tax law

authorizes upper-level tax inspectorates to reaudit taxpayers which were audited by subordinate tax inspectorates. In addition, on July 14, 2005, the Russian Constitutional Court issued a decision that allows the statute of limitations for tax liabilities to be extended beyond the three year term set forth in the tax laws if a court determines that a taxpayer has obstructed or hindered a tax audit. Because none of the relevant terms is defined, tax authorities may have broad discretion to argue that a taxpayer has "obstructed" or "hindered" an audit and ultimately seek back taxes and penalties beyond the three year term. In some instances, new tax regulations have been given retroactive effect.

Moreover, financial results of Russian companies cannot be consolidated for tax purposes. Therefore, each of our Russian subsidiaries pays its own Russian taxes and may not offset its profit or loss against the loss or profit of any of our other subsidiaries. In addition, intercompany dividends are subject to a withholding tax of 0% (if as of the date of deciding to pay dividends, the company receiving dividends for a period of not less than 365 days has continuously possessed not less than 50% of the charter capital of the company paying dividends (or depository receipts of the company giving the right to obtain not less than 50% of its dividends), if the cost of acquisition of shares or depository receipts of the company paying dividends exceeded RUR 500 million) or 9%, if being distributed by Russian companies to Russian companies and/or individual Russian residents, and 15%, if being distributed by foreign companies to Russian companies and natural persons (tax residents of the Russian Federation) or by Russian companies to foreign companies. Dividends from foreign companies to Russian companies are subject to a tax of 15%. Taxes paid in foreign countries by Russian companies may be offset against payment of these taxes in the Russian Federation up to the maximum amount of the Russian tax liability. In order to apply the offset, the company is required to confirm the payment of taxes in the foreign country. The confirmations must be authorized by the tax authority of the foreign country if taxes were paid by the company itself, and the confirmation must be authorized a the tax agent if taxes were withheld by the tax agent under foreign tax law or international tax agreement.

The foregoing conditions create tax risks in Russia that are more significant than typically found in countries with more developed tax systems, imposing additional burdens and costs on our operations, including management resources. In addition to our tax burden, these risks and uncertainties complicate our tax planning and related business decisions, potentially exposing us to significant fines and penalties and enforcement measures despite our best efforts at compliance. See also " Risks Relating to the Russian Federation and Other Countries Where We Operate Legal Risks and Uncertainties Selective or arbitrary government action could have a material adverse effect on our business, financial condition, results of operations and prospects and the value of our Shares."

Vaguely drafted Russian transfer pricing rules and lack of reliable pricing information may potentially affect our results of operations.

Russian transfer pricing rules effective since 1999 give Russian tax authorities the right to control prices for transactions between related entities and certain other types of transactions between unrelated parties, such as foreign trade transactions or transactions with significant price fluctuations if the transaction price deviates by more than 20% from the market price. Special transfer pricing rules apply to operations with securities and derivative instruments. The Russian transfer pricing rules are vaguely drafted, and are subject to interpretation by Russian tax authorities and courts. Due to the uncertainties in interpretation of transfer pricing legislation, the tax authorities may challenge our prices and make adjustments which could affect our tax position. As of the end of 2007, as a result of various tax audits of our companies we received assessments from the tax authorities for transfer-pricing related taxes, interest and penalties totaling \$20.2 million relating to the years 2004-2005. We have so far successfully challenged these assessments in court; however, the court decisions that have been issued are subject to appeal by the tax authorities with the Supreme Arbitration Court of the Russian Federation. If similar such assessments are upheld in the future, our financial condition and results of operations could be materially adversely affected. In addition, we could face significant losses

associated with the assessed amount of underpaid prior tax and related interest and penalties. See also " Characteristics of and changes in the Russian tax system could materially adversely affect our business, financial condition, results of operations and prospects and the value of the Shares."

In addition, a number of draft amendments to the transfer pricing law have recently been introduced which, if implemented, would considerably toughen the existing law. The proposed changes, among other things, may shift the burden of proving market prices from the tax authorities to the taxpayer, cancel the existing permitted deviation threshold and introduce specific documentation requirements for proving market prices.

Russian currency control regulations could hinder our ability to conduct our business.

In the past, Russian currency regulations imposed various restrictions on operations involving conversion of foreign currencies in an attempt to support the ruble. Effective from January 1, 2007, most of these restrictions have been removed. In 2007, Russian law changed to allow Russian residents to open accounts and effect operations through foreign bank accounts. However, in case of a crisis, the government and the CBR may impose requirements on cash inflows and outflows into and out of Russia or on the use of foreign currency in Russia in the future. For example, Russian companies currently must repatriate proceeds from export sales, subject to certain exceptions. Moreover, the foreign currency market in Russia is still developing and we may experience difficulty in converting rubles into other currencies. Any delay or difficulty in converting rubles into a foreign currency to make a payment or any practical difficulty in the transfer of foreign currency could limit our ability to meet our payment and debt obligations, which could result in the acceleration of debt obligations and cross defaults, or prevent us from carrying on necessary business transactions.

Russian capitalization rules could affect our ability to deduct interest on certain borrowings.

Russian capitalization rules limit the amount of interest that can be deducted by a Russian company on debts payable to non-resident shareholders. Until January 1, 2006, these rules applied only to loans issued to a Russian company by a foreign shareholder owning directly or indirectly more than 20% of the charter capital of the Russian company. However, thin capitalization rules that came into effect on January 1, 2006 extend the rules' application to loans issued to a Russian company by another Russian company that is affiliated with the foreign shareholder as well as to loans secured by such foreign shareholder or its affiliated Russian company. Under these rules, a positive difference between the accrued interest and maximum interest calculated in accordance with the thin capitalization rules is considered to be dividends and, thus, is not included in the taxable expenses. Application of the Russian thin capitalization rules could thus affect our ability to deduct interest on certain borrowings that we would otherwise be able to deduct.

Expansion of limitations on foreign investment in strategic sectors could affect our ability to attract and/or retain foreign investments.

On April 29, 2008, the Federal Law "On the Procedure for Foreign Investment in Companies With Strategic Impact on the National Defense and Security of the Russian Federation" (the "Strategic Industries Law") was adopted. See "Item 4. Information on the Company Regulatory Matters The Strategic Industries Law."

Since our subsidiary Southern Urals Nickel Plant carries out exploration and production on subsoil plots with nickel and cobalt ore deposits, it is likely to qualify as a Subsoil Strategic Company, as defined in "Item 4. Information on the Company Regulatory Matters The Strategic Industries Law." While it is currently unclear whether only the companies included into the list of subsoil plots of federal importance will be deemed to be Subsoil Strategic Companies, as the list of subsoil plots of federal importance has not been yet officially published, we cannot confirm whether the subsoil plots on which Southern Urals Nickel Plant carries out its activity will be included into such list, and thus

whether Southern Urals Nickel Plant is or will be considered a Subsoil Strategic Company. Our subsidiaries Port Posiet, Port Kambarka and Port Temryuk are included into the register of natural monopolies, and therefore are Strategic Companies, as defined in "Item 4. Information on the Company Regulatory Matters The Strategic Industries Law." According to the Strategic Industries Law, the activity of a business entity which is deemed to occupy a dominant position in the production and sale of metals and alloys with special features which are used in production of weapons and military equipment is also deemed to be strategic activity. Chelyabinsk Metallurgical Plant and Izhstal have been deemed by the FAS to occupy a dominant position in production and sale of certain metals and alloys with special features. However, they do not directly supply such products to customers producing weapons or military equipment and we are not aware of whether our products are or may be ultimately used in production of weapons or military equipment. Nevertheless, if these products of Chelyabinsk Metallurgical Plant and Izhstal are used in production of weapons and military equipment, they potentially can be considered Strategic Companies.

Therefore, any sale to a foreign entity or a group of entities of a stake in Port Posiet, Port Kambarka, Port Temryuk and possibly Southern Urals Nickel Plant, Chelyabinsk Metallurgical Plant and Izhstal, which according to the Strategic Industries Law is considered to give control, will be subject to prior approval from state authorities. Likewise, a sale to a foreign entity or group of entities of a stake in Mechel which provides control over Port Posiet, Port Kambarka, Port Temryuk and, possibly, Southern Urals Nickel Plant, Chelyabinsk Metallurgical Plant or Izhstal, will also be subject to prior approval from state authorities. Additionally, in case a foreign entity or group of entities which is a holder of securities of Port Posiet, Port Kambarka, Port Temryuk or Mechel, as well as, possibly, Southern Urals Nickel Plant, Chelyabinsk Metallurgical Plant or Izhstal, becomes a holder of voting shares in amount which is considered to give them direct or indirect control over these companies in accordance with the Strategic Industries Law due to a change in allocation of voting shares pursuant to the procedures provided by Russian law (e.g., as a result of a buy-back by the relevant company of its shares, conversion of preferred shares into common shares, holders of preferred shares becoming entitled to vote at a general shareholders meeting in the events provided under Russian law), such shareholders will have to apply for state approval of their control within three months after they received such control.

In this connection, there is a risk that the necessity to receive prior or subsequent state approvals and the chance of not being granted such approvals might affect our ability to attract foreign investments, to create joint ventures with foreign partners with respect to our companies that qualify as Strategic Companies or effect restructuring of our group which might, in turn, adversely affect our business, financial condition, results of operations and prospects.

Other Countries Where We Operate

We face similar risks in other countries of the former Soviet Union and former Soviet-bloc countries in Eastern and Central Europe.

We currently have four steel mills in Romania, a hardware plant in Lithuania, a blocking minority stake in a power plant in Bulgaria and two mining projects in Kazakhstan. We may acquire additional operations in countries of the former Soviet Union, former Soviet-bloc countries in Eastern and Central Europe or elsewhere. As with Russia, the other countries where we have operations are emerging markets subject to greater political, economic, social and legal risks than more developed markets. In many respects, the risks inherent in transacting business in these countries are similar to those in Russia, especially those risks set out above in "Economic Risks," "Political and Social Risks" and "Legal Risks and Uncertainties."

Item 4. Information on the Company

Overview

We are a vertically integrated mining and metals group with revenues of \$6.7 billion in 2007.

Our mining business consists of coal, iron ore and nickel mines in Russia. Our subsidiary Southern Kuzbass Coal Company and its subsidiaries operate coal mines located in the Kuznetsky Basin, near the city of Mezhdurechensk in southwestern Siberia. We have four open pit mines Krasnogorsk, Tomusinsk, Olzherassk and Sibirginsk and three underground mines Lenin, Sibirginsk and New-Olzherassk. In the Sakha Republic in eastern Siberia, our subsidiary Yakutugol operates the Nerungrinsk and Kagalassk open pit mines and the Dzhebariki-Khaya underground mine, and also holds the license rights to mine the undeveloped Elga coal deposit, which we plan to mine using the open pit method after making certain necessary infrastructure improvements.

We also provide coal washing services, both to our coal-mining subsidiaries and to third parties; according to the Central Dispatching Department of the Fuel and Energy Complex (the "Central Dispatching Department"), a Russian state enterprise that provides statistics and analytical information to Russia's Ministry of Energy and to Russian fuel and energy companies, at the end of 2007 we controlled 26% of Russia's overall coal-washing capacity.

Our subsidiary Korshunov Mining Plant operates three open pit iron ore mines Korshunovsk, Rudnogorsk and Tatianinsk. These mines are located near Zheleznogorsk-Ilinsky, a town in Irkutsk region in central Siberia. Our subsidiary Southern Urals Nickel Plant operates two open pit nickel mines Sakhara and Buruktal and a nickel production plant in the city of Orsk in Orenburg region, in the southern part of Russia's Ural mountain range.

In May 2008, we acquired Oriel Resources plc. Oriel's assets include the Voskhod chrome mine and the Shevchenko nickel project in Kazakhstan and the Tikhvin ferrochrome plant in Russia. These assets are in various stages of development and are an important component of our strategy of developing an integrated ferroalloy business.

Our steel business comprises the production and sale of semi-finished steel products, carbon and specialty long products, carbon and stainless flat products and value-added downstream metal products including hardware, stampings and forgings. It also produces significant amounts of coke, both for internal use and for sales to third parties. We have the flexibility to supply our own steel mills with our mining products or to sell such mining products to third parties, depending on price differentials between local suppliers and foreign and domestic customers.

Our steel and steel-related production facilities in Russia include two integrated steel mills, a coke plant, a hardware plant, a forging and stamping mill and a scrap processing facility in the southern Ural Mountains, a ferrosilicon plant in eastern Siberia, a hardware plant in northwestern Russia near the border with Finland and a coke and coal gas plant near Moscow. Outside of Russia, our steel facilities are in the E.U., including a hardware plant in Lithuania and four steel mills in Romania.

Our power business is the newest of our three segments. In April 2007, we acquired a controlling interest in Southern Kuzbass Power Plant OAO ("Southern Kuzbass Power Plant"), located in the city of Kaltan, in Kemerovo region. In June 2007, we acquired a controlling interest in Southern Kuzbass Power Sales Company, the largest power distribution company in Kemerovo region. In December 2007, we purchased a 49% stake in Toplofikatsia Rousse, a power plant located in Rousse, Bulgaria. We envision that our power business will enable us to market another higher value-added product made from our steam coal, such as electricity and heat energy, and increase the electric power self-sufficiency of the mining and steel segments of our business.

Our group includes a number of logistical and marketing assets that help us to deliver and market our mining products, raw steel, manufactured steel goods and ferroalloy products. We have freight

seaports in Russia on the Pacific Ocean and on the Black Sea and a freight river port on a tributary of the Volga River in central Russia. We have a freight railcar pool, and we have begun building a private rail branch line to access one of our coal deposits in eastern Siberia. We have a network of overseas branches and agents to market our products internationally, and we have a Russian domestic customer service subsidiary with 27 regional warehouses.

Mechel OAO is an open joint-stock company incorporated under the laws of the Russian Federation. We conduct our business through a number of subsidiaries. We are registered with the Federal Tax Service of the Russian Federation under state registration number 1037703012896. Our principal executive offices are located at Krasnoarmeyskaya Street, 1, Moscow 125993, Russian Federation. Our telephone number is +7 495 221 8888. Our Internet addresses are www.mechel.com and www.mechel.ru. Information posted on our website is not a part of this document. We have appointed CT Corporation Systems, 111 Eighth Avenue, New York, New York 10011 as our authorized agent upon which process may be served for any suit or proceeding arising out of or relating to our shares, as well as the ADSs and the GDSs or the deposit agreement related thereto.

Competitive Strengths

Our main competitive strengths are the following:

Leading mining and metals group by production volume with strong positions in key businesses

By volume we are the largest coking coal producer in Russia and one of the largest worldwide.

According to the Central Dispatching Department, in 2007 we were the largest producer of coking coal in Russia by volume. Based on publicly available information, we believe we are the third largest coking coal producer in the world based on 2007 production volume. According to the Central Dispatching Department, we also control 26% of Russia's coking coal washing capacity by volume.

Our acquisition of the remaining 75% less one share of Yakutugol in October 2007 has given us a 21% market share in the coking coal market in Russia by production volume in 2007 according to data from the Central Dispatching Department (counting Yakutugol's entire 2007 production). According to RasMin OOO ("RasMin"), a private information and research company focusing on the coal-mining industry, in 2007 Yakutugol's export sales of coking coal were the largest by volume of any Russian company. Yakutugol has major customers in Japan, South Korea and Taiwan.

Acquiring control over Yakutugol, which has three working mines and also holds the license to the undeveloped Elga coal deposit in the Sakha Republic, allowed us to add 244.0 million tonnes in additional coal reserves and 521.1 million tonnes in additional coal deposits as of January 1, 2008.

By volume we are Russia's second largest producer of specialty steel products and Russia's second largest producer of long steel products.

According to a comparison by Metall-Expert, a private Russian analytical agency focusing on the metals business ("Metall-Expert"), in 2007 by production volume we were Russia's second largest producer of long steel products (excluding square billets) after Evraz Group, and first in the production of wire rod. Our long steel products business has particularly benefited from increased infrastructure and construction activity in Russia. Our share of Russia's total production volume of reinforcement bars (rebar) in 2007 was approximately 23% according to Metall-Expert. According to Metall-Expert and Chermet, a Russian ferrous metals industry association ("Chermet"), we are Russia's second largest producer of specialty steel by production volume, accounting for 26% of Russia's total specialty steel output in 2007. Our product range in specialty steel is broader and more comprehensive than other Russian producers, giving us an added advantage in the domestic Russian market.

High degree of vertical integration

Our steel segment is able to source almost all its raw materials from our group companies, which provides a hedge against supply interruptions and market volatility.

We believe that our internal supplies of coking coal, iron ore and nickel provides us significant advantages over other steel producers, such as higher stability of operations, better quality control of end products, reduced production costs, improved flexibility and planning latitude in the production of our steel and value-added steel products and the ability to respond quickly to market demands and cycles. We believe that the level of our self-sufficiency in raw materials sets our steel business apart in certain respects: based on publicly available information, we believe we are the world's only steel manufacturer with its own nickel supply, and our acquisition of Oriel in May 2008 has given us the potential to mine our own chrome, which we believe would make us the world's only steel producer with its own chrome supply, based on publicly available information.

We are capable of internally sourcing 100% of the coking coal, 85% of the iron ore, 100% of the nickel and 100% of the ferrosilicon requirements of our steel segment. We constantly adjust the level of inputs that we source from our group companies on the basis of external economic factors such as market prices and transportation costs, as well as internal changes in demand for certain grades or types of materials. In 2007, we internally sourced 74% of the coking coal, 42% of the iron ore, 66% of the nickel and 30% of the ferrosilicon requirements of our steel segment. We are capable of satisfying approximately 50% of our group's electricity needs from our own generation facilities; in 2007, we satisfied approximately 29% of our electricity needs internally.

We view our ability to source our inputs internally not only as a hedge against potential supply interruptions, but as a hedge against market volatility. From an operational perspective, because our mining and power assets produce the same type of inputs that our manufacturing facilities use, we are less dependent on third-party vendors and less susceptible to supply bottlenecks. From a financial perspective, this also means that if the market prices of our steel segment's inputs rise, putting pressure on steel segment margins, the margins of our mining and power segments will tend to increase. The inverse is also true: while decreases in commodities prices tend to reduce revenues in the mining industry, they also create an opportunity for increased margins in our steel business.

Our logistics capability allows us to avoid infrastructure bottlenecks, to market our products to a broader range of customers and to reduce our reliance on trade intermediaries.

One of the ways we maximize our flexibility in getting the best possible prices for our products is by delivering goods as close to the consumer as possible. To this end, in recent years we have made significant investments in our logistics capabilities. Having our own logistics capability enables us to avoid infrastructure bottlenecks and allows us to market our products directly to a wider range of customers, both in terms of geographical reach and the size of the customers, and to reduce our reliance on trade intermediaries.

We own two seaports and a river port and we have our own rail rolling stock. Port Posiet in Russia's Far East, on the Sea of Japan, allows us easy access to Pacific Rim coal customers and provides a delivery terminal for the coal mined by our subsidiary Yakutugol in eastern Siberia. We are in the process of upgrading Port Posiet to accommodate Panamax ships, which will increase its attractiveness and utility as an export port for large volumes of coal. Port Kambarka, on the Kama River in the Udmurt Republic (a Russian administrative region also known as Udmurtia) is connected to the Volga River basin and the Caspian Sea, and is connected by canal to the Don River and the Baltic Sea. In 2007, we increased our strength in cargo shipment logistics with the acquisition of Port Temryuk on the Sea of Azov, an inlet of the Black Sea basin, which is primarily used for coal transshipment and provides us access to the fast-growing economies of the Black Sea basin and beyond. As of December 31, 2007, our subsidiary Mecheltrans OOO ("Mecheltrans") owned and leased more

than 3,900 rail freight cars that we use to ship our products. Pursuant to the terms of our license to mine the Elga coal deposit we plan to construct a private rail branch line, which we will own and control subject to applicable regulation. This rail branch line will connect the Elga coal deposit to Ulak Station on the Baikal-Amur Mainline, which in turn connects to the Transsiberian Railway, serving European Russia west of the Ural Mountains and eastward to the Pacific Ocean. We anticipate that the Elga branch line not only will provide an avenue for delivery of coal produced at the Elga coal deposit, but will eventually serve as the primary transportation corridor for coal mined in nearby license areas.

One of the lowest-cost coking coal producers worldwide

Our coking coal mining and transportation costs are among the lowest of our major Russian competitors.

We view strict cost management and increases in productivity as fundamental aspects of our day-to-day operations, and continually reassess and improve the efficiency of our mining and metals operations. Approximately 75% of our coking coal production is mined from open pit mines, which we believe based on publicly available information is a greater percentage than any of our major domestic competitors. Open pit mining is generally considered safer, cheaper and faster than the underground method of coal mining. Most of our mines and processing facilities have long and established operating histories.

By acquiring Yakutugol in the fourth quarter of 2007, we have secured a high-quality, high-volume coking coal producer with an existing Pacific Rim customer base as well as an opportunity for synergies with our Port Posiet seaport on the Pacific Ocean. Using our own port to ship coking coal to overseas customers from our eastern Siberian coal mines located within 2,500 kilometers from the port – a relatively short distance in the Russian context – also allows us to have coking coal transportation costs that we believe, based on publicly available information and our industry contacts, are among the lowest of our Russian competitors.

Our coking coal mining costs are lower than those of many of our international competitors.

Our base of operations in Russia and our high degree of vertical integration allows us to take advantage of a number of cost advantages vis-à-vis many of our international competitors. Having the ability to internally source our materials also gives us better market insight when we negotiate with our outside suppliers and improves our ability to manage our raw material costs. These advantages include lower labor costs, access to power and gas supplies that are inexpensive from an international perspective and our cost savings from producing approximately 75% of our coking coal in open pit rather than underground mines. We internally satisfy nearly a third of our electricity needs from our own co-generation facilities, and purchase the remainder at relatively low, regulated prices. We also purchase natural gas from Gazprom at relatively low, regulated prices for our power generation and other production needs. Based on publicly available information, we believe that Russia has lower labor costs, including fewer pension obligations, as compared to the United States, Western Europe, Japan and South Korea. We believe that our Russian base of operations provides us with cost advantages over many of our international competitors not only in terms of labor and energy costs, but tax and regulatory compliance as well.

We believe that we have a significant competitive advantage over our competitors in our ability to increase our production capacity relatively cost effectively because our substantial existing infrastructure can accommodate new facilities and production lines through brownfield development. Moreover, due to our integration, experience and location in Russia, which has some of the largest deposits of coal and iron in the world, we are better positioned than many of our international competitors to secure raw materials for any increases in steel production.

Strategically positioned to supply key growth markets

Our mining and logistical assets are well-positioned to expand exports to fast-growing Asian markets.

We believe that the geographical locations of our assets, particularly the eastern Siberian coal mines of Yakutugol and its undeveloped Elga coal deposit, are strategically located to expand exports of our products to key Asian markets. With Port Posiet on the Sea of Japan and its annual cargo throughput capacity of 2.5 million tonnes, located within 2,500 kilometers of our eastern Siberian coal assets, we are positioned to expand our exports to key growth markets; this is particularly relevant in respect of coking coal, which we are well-positioned to deliver for steel mills in fast-growing economies in South Asia and East Asia. We have a sales and distribution network with offices in four countries and agents in 15 additional countries. This network facilitated sales constituting 36% and 37% of our total sales in 2007 and 2006, respectively, reducing our reliance on the Russian market in the event that it were to experience a downturn. We view our international marketing capabilities and the proximity of our mining and logistical assets to key fast-growing economies as a key competitive advantage which allows us to diversify our sales, provides us with additional growth opportunities and acts as a hedge in the event of a decrease in demand from customers in Russia.

Our steel mills are well-positioned to supply Russian infrastructure projects.

Russia is our most important market and we have significant domestic market shares in all our key specialty steel and rolled long product lines. We believe we have established a strong reputation and brand image for Mechel within Russia, just as we have with our international customers. The location of a number of our core steel segment assets in the southern Urals positions us advantageously, from a geographical and logistical perspective, to serve the areas in Russia west of the Urals where Russia's construction industry is most active. The construction industry has been a key source of our growth and we have captured a large portion of the market; according to Metall-Expert, our share of Russia's total production volume of construction rebar in 2007 was approximately 23%.

Successful track record of acquisitions

Along with the expansion of the Russian economy and the increased efficiency of our operations and improved quality of our products, our ability to select acquisition targets and incorporate them into our group has been a key driver of our growth. The potential for synergies within our existing assets and the potential for reducing costs and improving efficiency are key criteria we apply when acquiring companies and assets. Through acquisitions, the nature of the business of our group has changed, expanding our steel product portfolio towards higher-value-added specialty steel products and our upstream product portfolio towards highly-sought grades of coal. Parallel to the expansion in our mining and metals businesses, our expanding logistics capabilities, including our own port facilities and rolling stock, have allowed us to reduce the potential for transportation bottlenecks and maintain and improve our reliability as a supplier to a wider range of customers.

Building upon our success in turning around the coal operations of Southern Kuzbass Coal Company in the late 1990s and following our acquisition and revitalization of Chelyabinsk Metallurgical Plant, in the last few years we have acquired other metal finishing and hardware manufacturing operations that we can supply with our steel. As we have acquired and integrated companies that are closer to the end-customers and produce higher-value-added products, the nature of our group has transformed steadily from primarily a raw materials processor to a vertically integrated, logistically coherent mining and metals group that offers customers products from virtually every stage of the industrial process.

With each of our acquisitions, we implement improved operational and management practices. We also analyze each acquisition to determine the minimum capital expenditures necessary to achieve our target increases in productivity and efficiency, both on a per-asset and group-wide basis. We also devote

the management, technological and logistical resources necessary to integrate new acquisitions into all aspects of our business, including the supply of raw materials and steel, industrial production and sales and distribution. We have a track record of using existing workforces and maintaining strong relations with the local communities where we operate following our acquisitions.

Our successful track record of identifying, acquiring and integrating target companies that complement our group is due in part to our clearly defined investment criteria, prudent approval procedures and our time-tested ability to identify synergies in target assets that can be quickly implemented while at the same time moving forward with our longer-term strategic goals. Our acquisition program evaluates potential targets to determine whether they conform to our long-term strategy to shift our product mix up the value chain, expand our mining asset base, expand into new markets and strengthen our position in existing markets and reduce costs through improved management and intra-group synergies.

A recent example of our track record of identifying opportunities for efficiency and intra-group synergies relates to Mechel Campia Turzii S.A. ("Mechel Campia Turzii"), which requires steel billets as raw material for its plant. In order to achieve cost savings, we decided to use steel billets supplied by a plant owned by our new Romanian subsidiary Ductil Steel, acquired in April 2008, to replace the billets formerly delivered to Mechel Campia Turzii from our Chelyabinsk Metallurgical Plant, thereby avoiding transportation costs and import duties. Another example of our ability to integrate our subsidiaries while identifying and eliminating inefficiencies is our acquisition of Yakutugol. Yakutugol operated at a loss in the first three quarters of 2007, during which we owned a non-controlling 25% interest in the company. In October 2007 we acquired a full 100% interest in Yakutugol, and in the fourth quarter of 2007, Yakutugol began operating with a profit primarily due to our implementation of effective management techniques.

Track record of strong financial performance

We have experienced year-on-year EBITDA growth of 55% and 47% in the financial years ended December 31, 2007 and 2006, respectively. We have also experienced year-on-year revenue growth of 52%, 15% and 4% in the financial years ended December 31, 2007, 2006 and 2005, respectively. We have been able to finance most of our capital improvements program with cash flow from operations. We have enjoyed access to financing from leading international banks, including during a period of high volatility in the international credit markets. In late 2007, we secured a \$2 billion loan to finance our purchase of Yakutugol and Elgaugol and related assets. In March 2008, we secured a \$1.5 billion loan to finance the acquisition of Oriel.

Our financial strength has allowed us to upgrade our existing facilities while we finance acquisitions. See " Capital Improvements Program."

Strong and focused management team

Our current management team has significant experience in all aspects of our businesses and has successfully transformed us from a small coal trading operation to a large, integrated coal, steel and power producer. Mr. Zyuzin, our controlling shareholder, is our Chief Executive Officer. Mr. Zyuzin has over 21 years of experience in the coal mining industry and has a doctorate in coal mining technical sciences. Our Chief Operating Officer, Alexey Ivanushkin, has significant experience from his previous positions at Glencore International AG ("Glencore International") and as chief executive officer at Chelyabinsk Metallurgical Plant. The chief executive of Mechel Management, Vladimir Polin, has almost 24 years of production-floor, marketing and management experience in the metals business. Many of our directors and officers began their careers in technical positions in mines and manufacturing facilities and moved up to senior management positions over the course of their careers.

Business Strategy

Our goal is to expand our mining business, through organic growth as well as through acquisitions; to improve our steel segment margins through plant modernization, cost cutting and product portfolio optimization; to maintain our strong position as a producer of carbon and specialty long steel products in Russia; and to capitalize on the synergies deriving from our status as an integrated mining and metals group. We also intend to leverage our core businesses, where appropriate, with acquisitions of value-added downstream businesses.

The key elements of our strategy include the following:

Enhancing our position as a leading mining and metals group

We plan to develop our existing reserves base.

We intend to build on our substantial mining experience by developing our existing coal and iron ore reserves, particularly in order to sell more high-quality coking coal and iron ore concentrate to third parties. We plan to increase our coal production from 21 million tonnes in 2007 to 37 million tonnes in 2012, and maintain our iron ore concentrate production at the level of at least 5.0 million tonnes, with a possible increase in iron ore production by 10-15% by 2012 due to upgrades to the Korshunov Mining Plant (see "Capital Improvements Program"). We intend to develop the Shevchenko nickel and Voskhod chrome ore deposits in Kazakhstan and fully commission the Tikhvin ferrochrome plant in Russia, which we recently acquired, and integrate and combine these assets with our ferroalloy business.

We intend to develop our recently acquired coking and steam coal reserves owned by Yakutugol. Yakutugol, which has three producing mines as well as a license for the undeveloped Elga coal deposit, holds mining rights to reserves that we believe will solidify our position as a leading world producer of coking coal for years to come. We intend to seek additional mining licenses through acquisitions and/or participation in auctions and tenders in view of our strategic plans and market dynamics. In particular, we believe that obtaining additional mining rights near the Elga coal deposit would allow us to realize more fully the potential benefit of the private rail branch line we are constructing to deliver Elga's future coal production to market.

We intend to increase our group's output of high-value-added products and continue to optimize our product mix.

We plan to continue our approach of selectively investing in technology and capital improvements, including expanding the use of continuous casters (concasters) in our steel manufacturing facilities, optimizing our product catalog and cutting production costs. We have already built a solid presence in the construction steel business, including the second largest market share in rebar, according to Metall-Expert based on Russian production volumes in 2007. We are also a market leader in wire rod production and have a strong presence in the construction steel market. We are also one of Russia's primary producers of specialty steel, having the second largest market share, according to Chermets and Metall-Expert based on Russian production volumes in 2007. We intend to maintain these positions, including through the addition of new production capacity achieved by targeted, cost-effective capital expenditures. We plan to increase our long products output from 3.4 million tonnes as of the end of 2007 to 4.5 million tonnes as of the end of 2009, primarily at our Chelyabinsk Metallurgical Plant, a facility we intend to modernize by means of a \$1.4 billion investment program over the next five years.

We intend to continue to seek out acquisition and expansion opportunities and realize the maximum potential from our completed acquisitions.

Our strategy involves finding acquisition and expansion opportunities that we believe will reinforce or complement our existing business lines. We actively monitor global mining and metals markets for new opportunities. In 2007, we completed a series of acquisitions that added a power segment to our group. In keeping with our long-term strategy of vertical integration, our strategy envisions realizing the maximum benefit from our own power generating facilities. We also intend to increase our presence and capability in ferroalloys, with the aim of positioning ourselves to be a leader in what we believe will be a high-margin business going forward. In 2007 and 2008, we also augmented our ferroalloy capabilities with our acquisition of Bratsk Ferroalloy Plant and Oriel, which includes the Tikhvin ferrochrome plant in Russia and the Voskhod chrome ore and Shevchenko nickel deposits in Kazakhstan. Once we have integrated and developed the assets from the Oriel acquisition, we expect to be self-sufficient not only in nickel, but chrome as well, which we believe will give us a rare competitive advantage among world steel producers.

An example of expansion in steel, a business line where we are already a well-established leader by production volume in Romania as well as Russia, is our April 2008 purchase of Ductil Steel, a company with two steel plants in Romania. We anticipate that the integration of Ductil Steel's production and marketing facilities will further optimize our existing production chain while reducing costs. We also expect that the acquisition will allow us to further develop our steel business, particularly in Romania and Eastern Europe, and will enhance our profile in Romania, where two of our other subsidiaries currently operate Mechel Targoviste and Mechel Campia Turzii.

We intend to continue to seek out opportunities to expand our group through acquisitions, including by obtaining new subsoil licenses in Russia and abroad. In doing so, we seek to maintain and expand our presence in regions with low costs and high economic growth potential. We intend to continue to selectively acquire value-added downstream businesses such as hardware, stampings and forgings producers to help us reach our customer base, including in new markets. This downstream integration:

is a logical extension of our specialty and low-carbon long product lines, representing a higher-margin, next value-added step for products that we already manufacture;

is in a market less cyclical than the upstream market, reducing our exposure to market downturns and commodity price fluctuations; and

moves us closer to our final customers, enabling us to better understand customer needs, influence buyer behavior and respond quickly to change.

Maintaining a high degree of vertical integration

We intend to maintain the flexibility to source our inputs internally as circumstances require.

Our recent expansion of our ferroalloy mining, processing and manufacturing capacity, with the acquisition of Bratsk Ferroalloy Plant (which produces ferrosilicon used in all steel manufacturing) and the Oriel assets (which we expect to more than double our capacity to mine and process ferroalloys used to make steel), is consistent with our strategy to maintain the potential to source our materials as our product focus shifts to higher-value-added steel products. We have expanded our power generation and distribution business into a separate financial reporting segment; we see expansion of our electric power capabilities not only as a diversification measure and a way to market another value-added product made from our coal, but also as a way to have more control over our energy efficiency and hedge against increases in the price of the electricity our facilities use. However, even as we expand and develop our internal sourcing capability we intend to adhere to our longstanding approach of purchasing inputs from third-party suppliers and selling products, including raw materials, to domestic

and international customers in a way that we believe creates the most advantageous profit opportunities for our group.

We plan to expand our logistical capabilities.

We intend to selectively expand our logistics capabilities, currently centered on our railway freight and forwarding company, and enhanced by our acquisitions of Port Posiet, Port Kambarka and Port Temryuk, strategic acquisitions designed to help us optimize our transportation expenses. We have engaged project engineers in preparation for the construction of a rail branch line to the Elga coal deposit in eastern Siberia.

We will leverage synergies among our core businesses.

In addition to synergies derived from our status as an integrated group, we believe that additional cost savings and opportunities will arise as we benefit from economies of scale and continue to integrate recent acquisitions, in particular by implementing improvements in working practices and operational methods. We regularly evaluate the manner in which our subsidiaries source their raw material needs and transfer products within the group in order to operate in the most efficient way, and we expect to identify and take advantage of further synergies among our core businesses.

Continuing to enhance our low-cost position in coal and improving steel segment margins

We aim to improve our steel segment margins through plant modernization, cost-cutting and product portfolio optimization.

We intend to further increase our efficiency and reduce our manufacturing costs by:

preserving cost advantages in our labor, raw materials and energy inputs;

achieving additional savings by fully integrating recent acquisitions into our operations;

producing higher value-added products, such as electricity and heat energy;

cultivating additional markets for steam coal; and

providing our mining and steel segments with their own energy resources.

Our ongoing plant modernization program is aimed at boosting productivity, increasing efficiency and reducing the environmental impact of our operations. In line with this strategy, in 2007 and early 2008 we completed a \$17.0 million modernization of the concaster at Mechel Targoviste, commissioned a \$12.3 million shaft furnace at Southern Urals Nickel Plant, finished a \$29.0 million overhaul of a rebar rolling mill at Chelyabinsk Metallurgical Plant, made a \$33.7 million extension of a sintering unit at Chelyabinsk Metallurgical Plant and completed a \$22.0 million air separation complex at Chelyabinsk Metallurgical Plant. In continuation of this strategy in 2008 and beyond, our steel segment upgrade plans include projects to increase the production capacity of our continuous casting units at our Chelyabinsk Metallurgical Plant, modernize smelters and reduce electricity consumption at Bratsk Ferroalloy Plant and modernize the electric arc furnace at Izhstal. See " Capital Improvements Program."

We intend to maintain our position as a low-cost producer of coal, meeting the challenge posed by the macroeconomic trends of growth of the Russian economy, improvement in wages and Russian domestic demand for goods and services and the continued recent appreciation of the ruble against the U.S. dollar.

We will strive to maintain strong export sales.

We intend to maintain strong relationships with our significant international customers. Although we are focused on growing our market position within our domestic markets (of which Russia is by far the largest), export sales, which constituted 36% of our total sales revenues in 2007, allow us to diversify our sales and reduce our reliance on the Russian market in the event that it were to experience a downturn. In our key export markets our steam coal customers include cement companies such as Sumitomo Osaka Cement and Taiheiyo Cement Corporation in Japan, Holcim in Europe, and Oytash Ic Ve Dis Ticaret A.S., Akcansa Cimento Sanayi Ve Ticaret A.S. and Lafarge Aslan Cimento A.S. in Turkey; as well as power generating companies such as OVA Elektrik A.S. in Turkey, KOSEP in South Korea, and RWE, DONG Energy and Varna Power Plant in Europe. Our coking coal customers include ArcelorMittal, Kazzinc and Kazchrome in Kazakhstan, various metal manufacturing facilities in Ukraine, JFE, Nisshin, Kobe Steel, Mitsui Mining and Sumitomo Metal Industries in Japan, POSCO in South Korea, Global Coke and Saurashtra Fuel in India, and Capital Iron and Steel Plant in China. Another E.U. customer is the Solvay Sodi chemical plant in Bulgaria. In our key export markets our product pricing policy is generally based on the current market price, our price forecasts and actual supply-and-demand dynamics.

Continuing expansion in high-growth markets

Increasing coking coal sales to high-growth international markets.

We intend to continue to capitalize on our ability to serve fast-growing Asian and other international markets. In particular we view Japan, China, South Korea and India as countries to which our international growth strategy will be applied.

Developing our domestic and export steel sales capabilities

Our continued focus on the domestic Russian market is a key element of our strategy. We are particularly well-positioned to supply construction and infrastructure projects in Russia from our Chelyabinsk Metallurgical Plant located in the southern Urals. Not only do our products and prices tend to appeal to Russian customers, but the geographical reach of our production and logistics facilities and sales network give us a presence in the Russian heartland that facilitates sales to customers in Russia's remote regions. For example, our domestic trading subsidiary Mechel-Service has 27 branch warehouses in various cities in Russia.

Our extensive operations in Romania, consisting of four steel mills, serve as an attractive platform to expand our steel product sales to the important export markets of the E.U.

Implementation of these strategies is subject to a number of risks. See "Item 3. Key Information Risk Factors" for a description of these risks.

Our History and Development

General

We trace our beginnings to a small coal trading operation in Mezhdurechensk in the southwestern part of Siberia in the early 1990s. See "Item 5. Operating and Financial Review and Prospects The Reorganization." Since that time, through strategic acquisitions in Russia and abroad, Mechel has developed into a large, integrated mining and metals group, comprising coal, iron ore, nickel, chrome ore and limestone assets and coke, steel and ferroalloy production, with operations and assets in Russia, Romania, Bulgaria, Lithuania and Kazakhstan. With each of our acquisitions, we implement improved operational and management practices, and we are generally able to realize significant increases in production efficiency and volume with only modest, targeted capital expenditures. We also devote the management, technological and logistical resources necessary to integrate new acquisitions

into all aspects of our business, including the supply of raw materials and steel, production methodologies and sales and distribution.

Mining Business

Mining process

Coal. Coal is mined using open pit or underground mining methods. Following a drilling and blasting stage, a combination of shovels and draglines is used for moving coal and waste at our surface mines. Production at the underground mines is predominantly from longwall mining, a form of underground coal mining where a long wall of coal in a seam is mined in a single slice. After mining, depending upon the amount of impurities in the coal, the coal is processed in a wash plant, where it is crushed and impurities are removed. Coking coal concentrate is then transported to steel plants for conversion to coke for use in steel-making. Steam coal is shipped to utilities which use it in furnaces for steam generation to produce electricity. Our main products comprise coking and steam coal concentrate, steam coal, iron ore concentrate and ferronickel. Among the key advantages of our mining business is the high quality of our coking coal, the low level of volatile matters in our steam coal and our modern coal washing facilities, primarily built during the 1970s and 1980s, including facilities built as recently as 2001-2002.

Iron ore. All three of our iron ore mines are conventional open pit operations. Following a drilling and blasting stage, ore is hauled by truck and/or rail to the concentrator plant. At the concentrator plant, the ore is crushed and ground to a fine particle size, then separated into an iron concentrate slurry and a waste stream using wet magnetic separators. The iron ore is upgraded from approximately 29.8% elemental iron to a concentrate that contains about 62.9% elemental iron. Tailings are pumped to a tailings dam facility located adjacent to the concentrating plant. The concentrate is sent to disk filters which remove the water to a moist filter cake, and then to a concentrate storage facility. The filter cake is then shipped to customers by rail during warmer months, but in colder periods the filter must be dried further to prevent freezing in the rail cars. Korshunov Mining Plant operates its own drying facility.

Nickel ore. Both of the mining operations run by our Southern Urals Nickel Plant are typical of Russian open pit mines of their size. The weathered lateritic ores and overburden (the layers of soil covering the ore-bearing stratum) can be directly loaded by electric shovel and dragline into haul trucks without any drilling or blasting. The ore is stockpiled and then loaded into railcars for shipment to Southern Urals Nickel Plant. Overburden waste is hauled to dumping locations inside the mined-out pits whenever possible or placed in dumps adjacent to the pit.

Nickel ore from both mines is transported by rail to our nickel production plant in the city of Orsk, which also lies east of the southern extremity of the Ural Mountains, close to the border with Kazakhstan. At this plant, nickel ore is processed into sinter, which is smelted (with the addition of coke and limestone) in shaft furnaces and then put through oxygen converters to produce converter matte and tailings. Converter matte is then processed into ferronickel. Ferronickel is shipped via rail from Orsk to our Chelyabinsk Metallurgical Plant and to St. Petersburg or Kaliningrad for further international delivery.

Limestone. Our limestone mining operation uses conventional mining technology. Ore is drilled and blasted, then loaded with electric shovels into haul trucks. Relatively minor amounts of waste are hauled to external dumps. The ore is hauled to stockpiles located adjacent to the crushing and screening plant. Ore is crushed, screened and segregated by size fraction. The crushed limestone is separated into three product categories for sale: 0-20 millimeters, 20-40 millimeters and 40-80 millimeters.

Description of key products

Coking coal and coking coal concentrates. Coking coal is washed, low-phosphorous bituminous coal designated for further processing into coke in coking furnaces, which in turn is used in the blast furnace in the production of pig iron, a precursor of steel in integrated steel mills. Coking coals have high plasticity, meaning that they are amenable to being softened, liquefied and resolidified into hard and porous lumps when heated in the absence of air. From our Southern Kuzbass Coal Company we offer coking coal of marks OS (meager and caking), KS (coking and caking), KS (blend) and KO (coking and meager). We process coking coal into coking coal concentrate to reduce ash content and increase volatility and plasticity. We offer coking coal concentrate of marks OS (meager and caking), K (coking), KS (coking and caking), GZh (gas and fat) and Zh (fat).

Steam coal and steam coal concentrates. Steam coal has properties that make it suitable for use in thermal applications, including electric power generation. From our Southern Kuzbass Coal Company we offer steam coal of marks TS (lean and caking), SS3SS (weakly to non-caking coal of Category 3), KSOK1 (coking and caking meager of Category 11), GZhO (gas, fat and meager), TR (lean, slab-stone, big and nut-sized), T (lean), TOK1 (lean and oxidized of Group 1), TOK2 (lean and oxidized of Group 2), G (gas), Gok1 (gas and oxidized of Group 1) and Gok2 (gas and oxidized of Group 2). We offer steam coal concentrates of marks TPKO (lean, slab-stone, big and nut-sized), TMSSh (lean, petty, seed-sized and culm), TRK (lean, big and slab-stone), TKO (lean, big and nut-sized), TK (lean, big), TO (lean, nut-sized), TM (lean, petty), TMS (lean, petty and seed-sized), TSSh (lean, seed-sized and culm), TSh (lean, culm), TKO o.e. (lean, big and nut-sized, cleaned) and GZhO (gas, fat and meager).

Other coal products. From our Southern Kuzbass Coal Company we also offer our customers middlings and anthracite concentrates of various grades.

Iron ore concentrate. From our Korshunov Mining Plant we offer iron ore concentrate with a standard iron weight fraction of 62%.

Non-ferrous metals. From our Southern Urals Nickel Plant, we offer customers a B1-grade copper sulfate for use in industrial and chemical applications. Southern Urals Nickel Plant offers low-ferrous ferronickel, but only to export customers. We do not sell nickel products within Russia to companies outside our group.

Sales of mining products

The following table sets forth third-party sales of mining products (by volume) and as a percentage of total sales (including intra-group sales) for the periods indicated.

Product	2007	2006	2005	2007	2006	2005
	in thousands of tonnes ⁽¹⁾			% of total sales, incl. intra-group		
Coking coal concentrate ⁽²⁾	6,018	6,603	5,013	62%	73%	64%
Steam coal ⁽²⁾	7,230	6,728	5,876	96%	100%	100%
Iron ore concentrate	2,358	2,885	2,876	51%	56%	64%
Nickel	13	12	11	79%	77%	87%

(1) Includes resales of mining products purchased from third parties.

(2) Includes only post-acquisition volumes of Yakutugol.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

The following table sets forth revenues by product, as further divided between domestic sales and exports (including as a percentage of total mining segment revenues) for the periods indicated:

Revenues	2007		2006		2005	
	Amount	% of revenues	Amount	% of revenues	Amount	% of revenues
(in millions of U.S. dollars, except for percentages)						
Coking coal concentrate	622.9	34%	518.3	40%	463.0	42%
Domestic Sales (%)	84%		74%		64%	
Export (%)	16%		26%		36%	
Steam Coal	436.3	24%	311.1	24%	273.5	25%
Domestic Sales (%)	13%		21%		12%

- (1) Includes revenues from transportation, distribution, construction and other miscellaneous services provided to local customers.

Marketing and distribution

Our mining products are marketed domestically primarily through Mechel Trading House and Mechel-Service and internationally through Mechel Trading AG's branch in Liechtenstein. The following table sets forth by percentage of sales the regions in which our mining segment products were sold for the periods indicated:

Region ⁽¹⁾	2007	2006	2005
Russia	44.4%	50.3%	44.1%
Other CIS	9.9%	10.3%	13.1%
Europe	33.5%	32.4%	31.6%
Asia	9.6%	4.4%	9.4%
Middle East	2.6%	2.6%	1.8%
	100.0%	100.0%	100.0%

- (1) The regional breakdown of sales is based on the geographic location of our customers, and not on the location of the end users of our products, as our distributor customers resell and, in some cases, further export our products.

In 2007, the five largest customers of our mining products were Glencore International (nickel, steam and coking coal), MMK (coking coal), EvrazResurs Trading House OOO (coking coal), Stratton

Metals Ltd ("Stratton Metals") (nickel) and Zapadno-Sibirsky Metallurgical Works OAO ("ZapSib") (iron ore), which together accounted for 50% of our mining segment sales.

Customer	% of total mining segment sales	Product	% of total product sales
Glencore International AG	18.9%	Nickel	69.2%
		Steam coal	4.7%
		Coking coal concentrate	0.6%
Magnitogorsk Metallurgical Plant OAO	8.1%	Coking coal concentrate	23.9%
EvrazResurs Trading House OOO	8.0%	Coking coal concentrate	23.7%
Stratton Metals Ltd	7.8%	Nickel	30.8%
Zapadno-Sibirsky Metallurgical Works OAO	7.6%	Iron ore concentrate	65.7%

Domestic sales

We generally do not involve intermediaries in the domestic distribution of our mining products. Our domestic coking and steam coal and iron ore customers are generally located in large industrial areas and have had long-standing relationships with us. We do not sell nickel products within Russia to companies outside our group.

We ship our coking coal concentrate from our coal washing facilities, located near our coal mines and pits, by railway directly to our customers, including steel producers. Our largest domestic customer for our coking coal concentrate is MMK, accounting for 24% of our total coking coal concentrate sales and 8% of our total mining segment sales in 2007. We generally conclude sales contracts with domestic customers on an annual basis, and set our prices and volumes on a monthly basis by open tender.

A subsidiary of electric utility Novosibirskenergo OAO, the largest power producer in Siberia, is our largest domestic customer of steam coal, accounting for 4% of our total steam coal sales and 1% of our total mining segment sales in 2007. We ship our steam coal from our warehouses by railway directly to our customers, which are predominantly electric power stations. Our supply contracts for steam coal are generally concluded with customers on an annual basis. Some of our steam coal is consumed within the group; for example, sales of steam coal and middlings (lower-quality coal) from our Southern Kuzbass Coal Company to our Southern Kuzbass Power Plant were \$9.8 million in 2007.

Iron ore concentrate is shipped via railway directly from our Korshunov Mining Plant to customers. Our largest domestic customer, ZapSib, accounted for 66% of our total iron ore concentrate sales and 8% of our total mining segment sales in 2007. We set our prices on a monthly basis.

Since 2002, Mechel Trading House has operated its wholly owned subsidiary, Mecheltrans, a railway freight and forwarding company. Mecheltrans owns its own rail rolling stock, consisting of 259 open cars and 193 pellet cars, leases 1,227 open cars and 20 pellet cars and has 2,280 open cars under equipment lease finance terms. The company transported domestically approximately 25.8 million tonnes of our cargo in 2007, approximately 29% of which was comprised of coal and iron ore.

Export sales

We export coking coal, steam coal concentrate, low bituminous and anthracite steam coal, iron ore concentrate and ferronickel.

In the year ended December 31, 2007, the largest customer of our mining segment was Glencore International, accounting for 19% of our total mining segment sales. Glencore International's purchases from Mechel consisted of nickel (93%) steam coal (6%) and coking coal (1%). It was also our largest customer in the years ended December 31, 2006 and 2005, accounting for 23% and 14%, respectively, of the total mining segment sales in those years.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

We are Russia's largest exporter of coking coal concentrate, according to RasMin, a private information and research company. Our exports of coking coal concentrate primarily go to Ukraine, Japan, Taiwan and Kazakhstan. In 2007, Rutek Trading AG was our largest foreign customer of coking coal concentrate, accounting for 4% of our total coking coal concentrate sales and 1% of our total mining segment sales by revenue. Shipments are made by rail and by ship.

Our exports of steam coal are primarily to Ukraine, Japan, Turkey, Belgium and Bulgaria, which together accounted for 65% of our total steam coal sales and 15% of our total mining segment sales by revenue in 2007. Our largest foreign customers of steam coal were Mechel Energy (a Swiss-registered international trading company in which we have a 50% stake) and Sumitomo Corporation. Steam coal is shipped to customers from our warehouses by railway and, in some cases, further by ship from Russian and Ukrainian ports.

Our Port Posiet processed 1.7 million tonnes of cargo, mostly coal, in 2007. We ship primarily our steam coal and coking coal concentrate to Japan from Port Posiet. The port's current capacity is approximately 2.5 million tonnes of annual cargo-handling throughput and 170,000-180,000 tonnes of warehousing capacity depending on coal type. The port's proximity to roads and rail links to key product destinations and transshipment points in China and Russia make it a cost-effective link in the logistical chain for bringing our Far East coal production to market.

In 2008, we are increasingly using spot contracts for export sales of coking and steam coal as compared to the 2007 financial year. Coal not shipped under spot contracts is sold under annual contracts.

We also sold iron ore concentrate to customers in China during 2007, which accounted for 32% of our total iron ore concentrate sales and 4% of our total mining segment sales in 2007. We ship iron ore concentrate to China by rail and by sea.

In 2007, we sold all of our ferronickel that we did not use internally to Glencore International and Stratton Metals. Our sales to Glencore International and Stratton Metals were approximately 69% and 31% of our total external ferronickel sales in 2007, respectively. In each case, the ferronickel is delivered by railway from our Southern Urals Nickel Plant to the port of St. Petersburg and it is then forwarded by the purchasers to their end users. Thus far in 2008 we have three nickel customers Glencore International, Stratton Metals, and Outokumpu Stainless OY. Outokumpu Stainless is a Finnish manufacturer of stainless steel products. We deliver the ferronickel to Outokumpu Stainless by railway to the Russian-Finnish border. In 2008 our sales to Glencore International, Stratton Metals and Outokumpu are expected to comprise approximately 50%, 20% and 30% of our external ferronickel sales, respectively.

Market share and competition

Coal

As a result of upstream acquisitions primarily by steel producers, based on publicly available information, we estimate that the number of Russian coal producers has decreased from about 250 in the mid-1990s to less than 60 in 2007. Based on our industry contacts and publicly available information, we believe that over the last few years, Russian coal mining companies have generally enjoyed a relatively stable customer base.

According to data from the Central Dispatching Department, in 2007 we were the largest coking coal producer in Russia, with a 21% share of total production by volume (counting Yakutugol's entire 2007 production) and we had a 9% market share with respect to overall Russian coal production by volume. We also controlled 26% of the coking coal washing facilities in Russia by capacity at the end of 2007, according to the Central Dispatching Department. The following table lists the main Russian

Edgar Filing: DATA I/O CORP - Form SC 13D/A

coking coal producers in 2007, the groups to which they belong, their coking coal production volumes and their share of total Russian production volume.

Group	Company	Coking coal production (thousands of tonnes)	% of coking coal production by volume

- (1) Yakutugol has been consolidated in our financial results since October 19, 2007. In this table Yakutugol's entire 2007 production is included.

In the domestic coal market, we compete primarily on the basis of price, as well as on the basis of the quality of coal, which depends upon the quality of our production assets and the quality of our mineral reserves. Competition in the steam coal market is also affected by the fact that most steam power stations were built near specific steam coal sources and had their equipment customized to utilize the particular type of coal produced at the relevant local source. Outside of Russia, competition in the steam coal market is largely driven by coal quality, including volatile matter and calorie content.

Iron ore

The Russian iron ore market is generally characterized by high demand and limited sources of supply, with product quality as the main factor driving prices. According to the Rudprom mining industry association, the market is dominated by relatively few producers, with the top three mining groups representing over 70% of total production of iron ore concentrate.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

The following table lists the main Russian iron ore concentrate producers in 2007, the groups to which they belong, their iron ore concentrate production volumes and their share of total Russian production volume.

Group	Company	Iron ore concentrate production (thousands of tonnes)	% of total production

Source: Rudprom mining industry association.

In addition, Sokolovsko-Sarbayaskoye Mining Amalgamation, which is located in Kazakhstan and has an output capacity of 16.8 million tonnes of iron ore concentrate and 8.6 million tonnes of pellets per annum, has been a major supplier to MMK since April 2006.

Nickel prices and demand are driven by trends in the international markets.

Coal production

Our active coal mines are primarily located in the Kuznetsky basin, a major Russian coal-producing region, and in the Sakha Republic in eastern Siberia. The earliest production at our Kuznetsky basin mines was in 1953, and 1979 in our Sakha Republic mines.

Our recent license acquisitions include:

in 2004 we acquired through auction a subsoil license for the Sibirginsky mine area of the Sibirginsky and Tomsky coal deposits, near our Sibirginsk Open Pit Mine;

Edgar Filing: DATA I/O CORP - Form SC 13D/A

in 2005 we acquired through auction two subsoil licenses for the Raspadsky open pit mine area of the Raspadsky coal deposit and the Berezovsky-2 area of the Berezovsky and Olzherassk coal deposits;

in 2005 we acquired through auction two subsoil licenses for the Erunakov-1 and Erunakov-3 coal mines near Kemerovo; and

in 2005 we acquired the right to explore for and develop coking coal under three subsoil licenses for the Sorokinsky, Razvedochny and Olzherassk coalfields in Kemerovo.

In October 2007, we acquired 75% less one share of Yakutugol, a coal producer located in eastern Siberia, in the Sakha Republic, increasing our stake to 100%. Yakutugol in turn owns the Kangalassk and Nerungrinsk open pit mines and the Dzhebariki-Khaya underground mine. Yakutugol extracts predominantly coking coal, as well as steam coal. The Nerungrinsk mine produces high-quality coking and steam coal. The Kangalassk mine produces steam coal that is sold as fuel for power plants in the Sakha Republic. The Dzhebariki-Khaya mine produces steam coal, most of which is sold to the state housing and municipal services administration. Yakutugol's output in 2007 was 10.8 million tonnes (2.7 million tonnes after the acquisition date) of coal consisting of 7.0 million tonnes (1.7 million tonnes after the acquisition date) of coking coal and 3.9 million tonnes (1.0 million tonnes after the acquisition date) of steam coal, and it sells most of its output to the Asian Pacific region, primarily Japan, South Korea and Taiwan, primarily pursuant to long-term contracts. We had previously acquired a blocking stake in Yakutugol of 25% plus one share in 2005.

Together with our acquisition of Yakutugol, we also acquired 68.86% of the shares of Elgaugol, which at the time of the acquisition held the license to the undeveloped Elga coal deposit in the Sakha Republic. As part of the auction conditions, we are required to meet certain operational milestones: (1) completing the legal permits for development of the Elga coal deposit by June 2009; (2) commencing construction of the mining plant by November 2009; (3) completing construction of the mining plant (including water supply) and commencing coal production by October 2010; (4) reaching an estimated annual coal production of 9.0 million tonnes by July 2013; and (5) reaching an estimated annual coal production of 18 million tonnes by July 2018. In addition, we undertook the obligation to build a rail branch line of approximately 315 kilometers in length, from the Ulak station on the Baikal-Amur Mainline up to the Elga coal deposit. See "Item 5. Operating and Financial Review and Prospects Contractual Obligations and Commercial Commitments." By special agreement with the Russian rail monopoly Russian Railways, we will operate this rail branch line as a private railway. After our acquisition of Elgaugol, the Elga mining license was transferred to Yakutugol effective upon the end of the first quarter of 2008. The Elga license area is part of a larger coal-bearing geological feature which up to now has been isolated from transportation links. The viability of the Elga project is dependent upon the construction of the rail branch line, as there are presently no transportation links by which to bring coal to market from the Elga license area.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

The table below sets forth certain information regarding the subsoil licenses used by our coal mines.

Mine ⁽¹⁾	License Area	License-Holding Subsidiary	License Expiry Date	Status ⁽²⁾	Area (sq. km)	Year Production Commenced

(1) "Underground" denotes an underground mine; "open pit" denotes a surface mine.

(2) "In production" refers to sites that are currently producing coal; "in development" refers to sites where preliminary work is being carried out in accordance with the terms of the relevant subsoil license, such as preparation and approval of the geological survey project (for the Olzherassk license area), geological surveys (for the Olzherassk, Razvedochny, Erunakovsk-3, Piatimetrovy coal-bed and Promezhutochny license areas), preparation and approval of construction project documentation (for the Elga license area) and construction (for the Erunakovsk-1 and Elga license areas).

(3) In process of re-registration due to merger of previous license holder into this company.

(4) Deposits of Olzherassk Pit are partially included in our reserves, as SEC standards for reserve estimates allow inclusion in reserves of only the mineral deposits that can be extracted with economic benefits during the license period.

(5) Not included in our mineral reserves.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

In 1994, Sibirginsk Open Pit, a predecessor-in-interest of our subsidiary Southern Kuzbass Coal Company, received a coal license to develop resources of the Uregolsk license area. Approximately 1.1 million tonnes of coal have been mined by us since that date at the mine site in the license area.

Due to what we believe was a technical error made when the license was originally issued, there is uncertainty as to whether the Uregolsk license area includes a part of the mine site with resources of 37 million tonnes of coal (the "New Uregolsk license area"). Applicable Russian regulations lack a procedure for correcting license boundaries in the event of an error, and as recently as in 2006 and 2007, we carried out mining activities on the New Uregolsk license area in coordination with Rostekhnadzor. Moreover, in cooperation with us, the Kemerovo region Subsoil Use Agency ("Kuzbassnedra") decided to offer the New Uregolsk license area by auction. The auction was originally scheduled for April 25, 2008; however, Kuzbassnedra suspended the auction until June 26, 2008. Southern Kuzbass Coal Company has submitted a bid in the auction. Moreover, in May 2008, the Kemerovo region prosecutor's office opened a criminal case on the basis of Southern Kuzbass Coal Company's alleged unlawful usage of the resources on the New Uregolsk license area, but no person has been charged yet.

We and Southern Kuzbass Coal Company believe that the coal mining at the New Uregolsk license area was in compliance with applicable law. However, our subsidiary Southern Kuzbass Coal Company might face civil claims and its officers can be charged with criminal violations of relevant subsoil use laws. Our mineral reserves and deposits as set forth in this document as of January 1, 2008 do not include minerals within the New Uregolsk license area.

The coking coal produced by our mines is predominately low-sulfur (0.3%) bituminous. Heating values for the coking coal range from 6,861 to 8,488 kcal/kg on a moisture- and ash-free basis. Heating values for the steam coal range from 6,627 to 8,286 kcal/kg on a moisture- and ash-free basis.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

(2) "Underground" denotes an underground mine; "open pit" denotes a surface mine.

(3) Includes only post-acquisition production volumes.

Coal washing plants

We operate five coal washing plants located near our coal mines in Southern Kuzbass. Of the total coal feed enriched by our washing plants in 2007, approximately 84.5% (13.3 million tonnes) was supplied by our own mining operations, and 15.5% (2.45 million tonnes) from the nearby Rospadskaya underground mine (owned by Rospadskaya OAO) on a tolling basis. In 2007, the capacity of our washing plants in Russia accounted for 26% of the total domestic coking coal washing capacity in Russia by volume (taking into account the Yakutugol acquisition), according to the Central Dispatching Department.

Investments in coal companies

We own 16.1% of Mezhdurechye, a Russian coal producer whose production volume accounted for 4% of Russian coking coal output and 2% of Russian total coal output in 2007, according to the Central Dispatching Department.

Iron ore and concentrate production

Korshunov Mining Plant operates three iron ore mines, Korshunovsk, Rudnogorsk and Tatianinsk, as well as a concentrating plant located outside of the town of Zheleznogorsk-Ilimsky, 120 kilometers east of the city of Bratsk in eastern Siberia. The Korshunovsk mine is located near the concentrating plant. The Rudnogorsk mine is located about 85 kilometers to the northwest of the concentrating plant. The Tatianinsk mine is located about 10 kilometers to the north of the concentrating plant. All three mines produce a magnetite ore (Fe_3O_4). We acquired Korshunov Mining Plant in 2003.

The table below sets forth the subsoil licenses used by our iron ore mines and the expiration dates thereof.

License area	License Holder	License Expiry Date	Status	Area (sq. km)	Year Production Commenced
Korshunovsk	Korshunov Mining Plant	June 2009	In production	4.3	1965
Tatianinsk	Krasta ZAO ⁽¹⁾	June 2012	In production	1.3	1982
Rudnogorsk	Korshunov Mining Plant	June 2014	In production	5.1	1986
Krasnoyarsk	Korshunov Mining Plant	July 2015	Feasibility study ⁽²⁾	3.0	n/a

(1) In February 2007, Korshunov Mining Plant transferred the Tatianinsk license to its wholly owned subsidiary Krasta ZAO.

(2) Not included in our mineral reserves and deposits.

The table below summarizes our iron ore and iron ore concentrate production for the periods indicated.

	2007		2006		2005	
	Tonnes	Grade (% Fe)	Tonnes	Grade (% Fe)	Tonnes	Grade (% Fe)
(in thousands of tonnes) ⁽¹⁾						
Korshunovsk ore production	6,573	25.8%	6,193	26.2%	6,521	26.7%
Rudnogorsk ore production	5,754	35.6%	5,224	37.1%	4,104	35.3%
Tatianinsk ore production	468	29.9%	222	32.4%	707	30.2%
Total ore production	12,795	30.4%	11,639	31.2%	11,333	30.0%
Iron ore concentrate production	4,963	62.2%	4,976	62.6%	4,522	62.6%

(1) Volumes are reported on a wet basis.

Nickel ore and nickel production

Southern Urals Nickel Plant operates two open pit nickel ore mines, Sakhara and Buruktal, as well as a nickel production plant in Orsk. The Sakhara mine is located east of the Ural Mountains in Chelyabinsk region, about 375 kilometers north of Orsk. The Buruktal mine is located east of the southern tip of the Ural Mountains, in Orenburg region, close to the border with Kazakhstan. It is located 230 kilometers east of Orsk. We

acquired Southern Urals Nickel Plant in 2001.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

The table below sets forth the subsoil licenses used by our nickel mines and the expiration dates thereof.

License area	License Holder	License Expiry Date	Status	Area (sq. km)	Year Production Commenced
Buruktal	Southern Urals Nickel Plant	December 2012	In production	11.9	1968
Sakhara	Southern Urals Nickel Plant	April 2013	In production	2.2	1994

The following table summarizes our nickel ore and nickel products production for the periods indicated:

	2007		2006		2005	
	Tonnes	Grade (% Ni)	Tonnes	Grade (% Ni)	Tonnes	Grade (% Ni)
(in thousands of tonnes) ⁽¹⁾						
Sakhara ore production	1,236.1	1.13%	1,118.3	1.10%	1,113.7	1.14%
Buruktal ore production	1,591.3	1.05%	1,240.3	1.05%	901.6	1.06%
Total ore production	2,827.4	1.09%	2,358.6	1.07%	2,015.3	1.1%
Nickel production	17.1	89.91%	14.4	89.75	12.6	n/a

(1) Volumes are reported on a wet basis.

Limestone production

The Pugachev limestone quarry is an open pit mine located approximately 12 kilometers southeast of the city of Beloretsk in the Ural Mountains. The quarry was developed in 1952 to support Beloretsk Metallurgical Plant's steel making facilities, which are currently closed. The Pugachev limestone quarry is owned by our Beloretsk Metallurgical Plant, which we acquired in 2002. The current subsoil license is valid until January 2014.

The quarry produces both high-grade flux limestone for use in steel making and nickel smelting and aggregate limestone for use in road construction. The flux limestone and aggregate limestone are the same grade of limestone, but they are produced in different fraction sizes, which determines their suitability for particular use. In 2007, approximately 78.2% of the limestone produced at Pugachev was used internally, with 54.7% shipped to Chelyabinsk Metallurgical Plant, 19.5% shipped to Southern Urals Nickel Plant, 3.6% to Izhstal, 0.4% shipped to Mechel Materials OOO ("Mechel Materials"), 2.6% used as auxiliary and the remaining 19.2% sold to third parties. We are capable of internally sourcing 100% of the limestone requirements of our steel operations.

The table below summarizes our limestone production for the periods indicated.

	2007	2006	2005
Limestone production	1,831.6	2,013.7	2,054.0

(in thousands of tonnes)

The decrease of limestone production volumes during from 2005 through 2007 period relates to the improvement in quality of limestone fractions produced and a corresponding decrease in our requirements for 40-80 millimeter and 20-40 millimeter limestone fractions. Producing extra tonnage is not economically justifiable, as it results in increased unutilized inventory. In 2007 the limestone quarry worked on more deep reprocessing of 0-20 millimeter limestone fractions extracted in prior periods and converting them to the 0-5 millimeter fraction, which is needed for our iron smelting plants. Correspondingly, processed limestone production (including reprocessing of already-mined inventory) increased, but extraction of limestone was performed based on our internal needs.

Mineral reserves

Our mineral reserves are based on exploration drilling and geological data, and are that part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination. Each year we update our reserve calculations based on actual production and other factors, including economic viability and any new exploration data. Our reserves, consisting of proven and probable reserves, meet the standards set by the SEC in its Industry Guide 7 and have been reviewed by Marston & Marston, independent mining engineers, as of January 1, 2008.

Russian subsoil licenses are issued for defined boundaries and specific periods, generally about 20 years. Our declared reserves are contained within the current license boundary. Additionally, to meet the legally viable requirement of the SEC, only material that is scheduled to be mined during the license period of existing subsoil licenses based on planned production was included in reserves.

Our subsoil licenses expire on dates falling in 2009 through 2025. These subsoil licenses, however, may be terminated prior to, or may not be extended at, the time of their expiration. See "Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry Our business could be adversely affected if we fail to obtain or renew necessary licenses and permits or fail to comply with the terms of our licenses and permits," "Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry Deficiencies in the legal framework relating to subsoil licensing subject our licenses to the risk of governmental challenges and, if our licenses are suspended or terminated, we may be unable to realize our reserves, which could materially adversely affect our business and results of operations" and "Regulatory Matters Subsoil licensing."

In addition to our mineral reserves, we have mineral deposits. Our mineral deposits are similar to our mineral reserves in all respects, except that the deposit is either (1) contained within the license boundary but is scheduled to be extracted beyond the license period or (2) is adjacent to but not contained within the license boundary. In both such cases, we intend to obtain the legal right to extract such deposit in the future. Mineral deposits may not ever be converted into mineral reserves if licenses are not renewed and/or extraction of such mineral deposits does not become economically viable in the future. See "Item 3. Key Information Risk Factors Risks Relating to Our Business and Industry Our business could be adversely affected if we fail to obtain or renew necessary licenses and permits or fail to comply with the terms of our licenses and permits" and "Item 3. Key Information Risk Factors Risks Relating to the Russian Federation and Other Countries Where We Operate Legal Risks and Uncertainties Weaknesses relating to the legal system and legislation create an uncertain environment for investment and business activity."

The table below summarizes our reserves as of January 1, 2008.

Summary	Coal		Iron Ore	Nickel Ore	Limestone
	Coking	Steam			
	(quantities in millions of tonnes)

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Elga, a coalfield for which our subsidiary Yakutugol holds a subsoil license, is an undeveloped property in a remote area of Siberia. Elga is capable of producing large quantities of export-quality coking and steam coal. The region was first discovered and explored in 1952, with the first geological surveys being conducted in 1954 through 1956, followed by prospecting surveys in 1961-1962. Exploration drilling was completed in 1998, and since exploration was completed, there have been several studies on Elga, including geology and resources, mine planning, railway construction and feasibility studies. We plan to mine Elga using open pit mining methods.

There are a number of significant risk factors associated with the Elga project. These risks have the potential to impact the calculation of the Elga reserves by affecting the project's legal or economic viability. Key risks that have been identified include the following:

According to the terms of the subsoil license for the Elga coal deposit, we must construct a rail branch line from the Baikal-Amur Mainline to the coal deposits, approximately 335 kilometers in length, and this branch line must be operational by September 30, 2010. Previous detailed studies have estimated that it will take three to four years to construct such a branch line. The current construction schedule is very aggressive and may not be achievable. If this schedule is not met, the potential exists that our subsoil license for Elga will be suspended or terminated.

The viability of the Elga project is dependent upon the construction of the rail branch line referred to above. Construction of the branch line has begun but a detailed engineering study needs to be conducted to determine construction volumes for dirt moving and the total construction costs. For the reserve evaluation, railroad construction costs were extrapolated from 2005 figures.

A detailed feasibility study was completed on the Elga project in 2005. A new engineering study needs to be completed on the project to determine project capital and operating costs due to the significant cost inflation that has occurred in the mining industry since 2005. Increases in capital and operating costs have the potential to make the Elga project uneconomical because of the project's sensitivity to these costs.

The Elga project is very sensitive to market prices for coal because of the high initial capital costs and expected high ongoing operating costs. Coal prices will need to be near or above the current historically high price levels for several years in order for this project to have a positive net present value at a 12% discount rate, which was used for the reserves calculation.

Iron ore

As of January 1, 2008, we had iron ore reserves (proven and probable) totaling 50.9 million tonnes at an average iron grade of 29.0%. The table below summarizes iron ore reserves by mine.

Iron Ore Reserves ⁽¹⁾	Tonnes ⁽²⁾	Grade (% Fe) ⁽³⁾
	(in millions of tonnes)	
Korshunovsk	9.2	24.9%
Rudnogorsk	38.0	30.2%
Tatianinsk	3.7	26.2%
Total	50.9	29.0%

(1) Includes adjustments for dilution and mine recovery, based on historical records.

(2) Volumes are reported on a wet basis.

(3)

Metallurgical recovery is projected to be 70.2%.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

As of January 1, 2008, we had iron ore deposits totaling 109.4 million tonnes at an average iron grade of 27.9%. The table below summarizes iron ore deposits by mine.

Iron Ore Deposits⁽¹⁾	Tonnes⁽²⁾	Grade (% Fe)⁽³⁾
	(in millions of tonnes)	
Korshunovsk	47.4	24.9%
Rudnogorsk	62.0	30.2%
Total	109.4	27.9%

(1) Includes adjustments for dilution and mine recovery, based on historical records.

(2) Volumes are reported on a wet basis.

(3) Metallurgical recovery is projected to be 70.2%.

Nickel ore

As of January 1, 2008, we had nickel ore reserves (proven and probable) totaling 12.0 million tonnes at an average nickel grade of 1.0%. The table below summarizes nickel ore reserves by mine.

Nickel Ore Reserves⁽¹⁾	Tonnes⁽²⁾	Grade (% Ni)⁽³⁾
	(in millions of tonnes)	
Sakhara	5.0	1.0%
Buruktal	7.0	1.0%
Total	12.0	1.0%

(1) Includes adjustments for dilution and mine recovery, based on historical records.

(2) Volumes are reported on a dry basis.

(3) Metallurgical recovery is projected to be 73.8%.

As of January 1, 2008, we had nickel ore deposits totaling 69.7 million tonnes at an average nickel grade of 1.0%. The table below summarizes nickel ore deposits.

Nickel Ore Deposits⁽¹⁾	Tonnes⁽²⁾	Grade (% Ni)⁽³⁾
--	-----------------------------	---------------------------------------

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Nickel Ore Deposits⁽¹⁾	Tonnes⁽²⁾	Grade (% Ni)⁽³⁾
	(in millions of tonnes)	
Buruktal	69.7	1.0%

- (1) Includes adjustments for dilution and mine recovery, based on historical records.
- (2) Volumes are reported on a dry basis.
- (3) Metallurgical recovery is projected to be 73.8%.

Limestone

As of January 1, 2008, we had limestone reserves (proven and probable) totaling 17.4 million tonnes at 55.2% CaO.

Limestone Reserves⁽¹⁾	Tonnes	Grade (% CaO)
	(in millions of tonnes)	
Pugachev	17.4	55.2%

(1) Includes adjustments for dilution and mine recovery, based on historical records.

As of January 1, 2008, we had limestone deposits totaling 10.1 million tonnes at 55.2% CaO.

Limestone Deposits⁽¹⁾	Tonnes	Grade (% CaO)
	(in millions of tonnes)	
Pugachev	10.1	55.2%

(1) Includes adjustments for dilution and mine recovery, based on historical records.

Steel Business

Our steel business comprises production and sale of semi-finished steel products, carbon steel long products and specialty steel long products, carbon and stainless flat products, and value-added downstream metal products including hardware, stampings and forgings. Within these product groups, we are further able to tailor steel grades to meet specific end-user requirements. Our steel business is supported by our mining business, which includes coal (steam and coking coal), iron ore, nickel and limestone.

Our steel business has production facilities in Russia, Lithuania and Romania. Our acquisition of Ductil Steel in early 2008 represents further expansion of our production and marketing capacity into the E.U. The acquisition of Ductil is allowing us to optimize our existing production chain and maximize the efficiency of our intra-group sales structure, while at the same time reducing costs including import duties and logistics expenses associated with bringing billets to our Romanian plants from our Russian steel mills in our growing Romanian steel business.

Steel manufacturing process and types of steel

The most common steel manufacturing processes are production in a basic oxygen furnace, or BOF, and production in an electric arc furnace, or EAF.

In BOF steel manufacturing, the principal raw material used to produce steel is iron ore and the metal is chemically smelted from the ore. Mined iron ore is crushed, concentrated and mixed with limestone and a small amount of coke. The mixture is sintered, crushed and then constantly fed, in alternating layers with more coke, into a blast furnace. At the same time natural gas and oxygen are injected into the furnace to reduce the iron, melt the mixture and obtain pig iron, an intermediate product with an iron content of 94-97%, a carbon content of 2-4% and 1-2% non-ferrous elements). Liquid pig iron is processed further in a BOF to produce molten steel with less than 2% carbon content. The molten steel, depending on the products in which it will be used, undergoes additional refining and is mixed with manganese, nickel, chrome, and titanium ferroalloys and other components to give it special properties. Approximately 60% of the world's steel output is made in a BOF, most typically in large-scale plants that must produce 3-4 million tonnes per year to be economically efficient.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

In EAF steel manufacturing, steel is generally produced from remelted scrap. Heat to melt the scrap is supplied from high-voltage electricity that arcs within the furnace between graphite electrodes and the scrap. This process is suitable for producing almost all steel alloys, including stainless steel and other specialty steel; however, it is limited in its use for production of high-purity carbon steel. Approximately 35% of world steel output is made in EAFs.

Steel products are broadly subdivided into two categories flat and long products. Flat products are hot-rolled or cold-rolled coils and/or coated sheets that are used primarily in manufacturing industries, such as the white goods and automotive industries. Long products are used for construction-type applications (beams, rebar) and the engineering industry. To create flat and long products, molten raw steel is cast in continuous-casting machines or casting forms (molds). The molten steel is processed and hardened into semi-finished products in the form of blooms, slabs or ingots. Ingots and blooms have a square cross-section and are used for further processing into long products. Slabs have a rectangular cross-section and are used to make flat products. All products are rolled at high temperatures, a process known as hot rolling. They are drawn and flattened through rollers to give the metal the desired dimensions and strength properties. Some flat steel products go through an additional step of rolling without heating, a process known as cold rolling. After cold rolling, annealing in furnaces with gradual cooling that softens and stress-relieves the metal is periodically required. Oil may be applied to the surfaces for protection from rust.

The properties of steel (strength, solidity, plasticity, magnetization, corrosion-resistance) may be modified to render it suitable for its intended future use by the addition by smelting of small amounts of other metals into the structure of the steel, varying the steel's chemical composition. For example, the carbon content of steel can be varied in order to change its plasticity, or chrome and nickel can be added to produce stainless steel. Resistance to corrosion can be achieved through application of special coatings (including polymeric coatings), galvanization, copper coating or tinning, painting and other treatments.

Description of key products

Coke. Coke is added to the blast furnace as a reducing agent for iron in the smelting process. It is a product prepared by pyrolysis (heating in the absence of oxygen) of low-ash and low-phosphorus coking coal. We offer customers coke from our Moscow Coke and Gas Plant OAO ("Moscow Coke and Gas Plant") and Mechel-Coke OOO ("Mechel-Coke").

Coking products. Coking products are hydrocarbon products obtained as a byproduct of the production of coke. We produce coke in our subsidiaries Moscow Coke and Gas Plant and Mechel-Coke. We offer our customers coal tar, naphthalene and other compounds. Worldwide, coal tar is used in diverse applications, including medications for treatment of psoriasis and dandruff, boiler fuel, food additives and pavement sealants. Naphthalene, a product of the distillation of coal tar, is best known as the active ingredient in mothballs. It is used by the chemical industry to produce chemical compounds used in insecticides, surfactants, synthetic dyes, solvents, plasticizers and other products.

Ferrosilicon. Ferrosilicon is used in ferrous metallurgy as a deoxidizer or as an alloying element for production of electrotechnic, spring wire, corrosion-resistant and heat resistant steel grades, or as a pig iron modifier. In nonferrous metallurgy, ferrosilicon is used as a reducing agent for production of nonferrous metals and alloys. We offer our customers ferrosilicon from our Bratsk Ferroalloy Plant.

Pig iron. Pig iron is a high-carbon form of iron produced from smelting iron ore in the blast furnace. It is brittle and is useful primarily as an intermediate product in the manufacturing of steel. Pig iron can typically also be processed to produce cast iron. We sell small volumes of pig iron from our Chelyabinsk Metallurgical Plant to third parties.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

Semi-finished products. Semi-finished products typically require further milling before they are useful to end consumers. We offer semi-finished billets, blooms and slabs. Billets and blooms are precursors to long products and have a square cross section. The difference between billets and blooms is that blooms have a larger cross-section. Slabs are precursors to flat products and have a rectangular cross section. We offer our customers billets and blooms produced by Mechel Targoviste and Izhstal and slabs produced by Chelyabinsk Metallurgical Plant.

Long steel products. Long steel products are rolled products used in many industrial sectors, particularly in the construction and engineering industries. They include various types of bars (including concrete reinforcement bar, or rebar, and calibrated long steel products), wire rod and a wide range of profiles. Our long products are manufactured at Chelyabinsk Metallurgical Plant, Izhstal and Beloretsk Metallurgical Plant in Russia, and Mechel Campia Turzii and Mechel Targoviste in Romania.

We offer our customers a wide selection of long steel products produced from various kinds of steel, including rebar, calibrated long steel products, steel angles, round products, surface-conditioned and bearing steel products, wire rod, square billets and others.

Flat products. A flat product is a steel product that has been flattened by rolls with smooth surfaces and ranges of dimension, varying in thickness and width. Our flat products include hot- and cold-rolled sheets of various thicknesses, including stainless steel sheets. Our flat products are produced at Chelyabinsk Metallurgical Plant.

Stampings and forgings. Stampings are custom parts stamped from flat products. Forgings are specialty products made through the application of localized compressive forces to metal. Forged metal is stronger than cast or machined metal. Our forgings and stampings are offered on a made-to-order basis according to minimum batches depending on the products' sizes. Our product offerings include rollers and axles used in vehicle manufacturing; bearings, gears and wheels; tools and parts; industrial stencils and dies; and others. Our stampings and forgings are produced at Urals Stampings Plant, including its Chelyabinsk branch. Izhstal and Mechel Targoviste also produce stampings and forgings.

Hardware. Hardware are products resulting from re-processing of wire rod and which are ready for use in manufacturing and consumer applications. Our hardware is produced at Izhstal, Beloretsk Metallurgical Plant and Vyartsilya Metal Products Plant in Russia, Mechel Campia Turzii in Romania and Mechel Nemunas in Lithuania. Our wide-ranging hardware product line includes spring wire; barbed wire; electrodes; wire for ball bearing manufacturing; precision alloy wire; rebar wire; metal cord; zinc-coated wire; copper-coated wire; various types of nails; cables specially engineered for the shipping, aerospace, oil and gas and construction industries; aerials for electric trams and buses; cables for passenger and freight elevators; general-purpose iron and steel straps and clips; woven wire cloth; and others.

Edgar Filing: DATA I/O CORP - Form SC 13D/A

The following table sets out our production volumes by primary steel product categories and main products within these categories.

	2007	2006	2005
	(in thousands of tonnes)		
Coke	3,886	2,570	2,589
Coking Products	129	49	85
Pig Iron	3,686	3,631	3,349
Ferrosilicon ⁽¹⁾	38		
Semi-Finished Steel Products, including:	1,705	1,785	1,777
Carbon and Low-Alloyed Semi-Finished Products	1,647	1,716	1,755
Long Steel Products, including:	3,040	2,529	2,510
Stainless Long Products	17	15	12
Alloyed Long Products	82	79	123
Rebar	1,637	1,358	1,349
