Table of Contents

BUILDERS FIRSTSOURCE, INC. AND SUBSIDIARIES
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

1. Basis of Presentation

Builders FirstSource, Inc., a Delaware corporation formed in 1998, is a leading supplier and manufacturer of structural and related building products for residential new construction in the United States. In this quarterly report, references to the company, we, our, ours or us refer to Builders FirstSource, Inc. and its consolidated subsidiaries unless otherwise stated or the context otherwise requires.

In the opinion of management, the accompanying unaudited condensed consolidated financial statements include all recurring adjustments and normal accruals necessary for a fair statement of the company's financial position, results of operations and cash flows for the dates and periods presented. Results for interim periods are not necessarily indicative of the results to be expected during the remainder of the current year or for any future period. All significant intercompany accounts and transactions have been eliminated in consolidation.

The condensed consolidated balance sheet as of December 31, 2009 is derived from the audited consolidated financial statements but does not include all disclosures required by accounting principles generally accepted in the United States of America. This condensed consolidated balance sheet as of December 31, 2009 and the unaudited condensed consolidated financial statements included herein should be read in conjunction with the more detailed audited consolidated financial statements for the years ended December 31, 2009 included in our most recent annual report on Form 10-K. Accounting policies used in the preparation of these unaudited condensed consolidated financial statements are consistent with the accounting policies described in the Notes to Consolidated Financial Statements included in our Form 10-K.

2. Net Loss per Common Share

Net loss per common share (EPS) is calculated in accordance with the *Earnings per Share* topic of the Codification, which requires the presentation of basic and diluted EPS. Basic EPS is computed using the weighted average number of common shares outstanding during the period. Diluted EPS is computed using the weighted average number of common shares outstanding during the period, plus the dilutive effect of potential common shares.

The table below presents a reconciliation of weighted average common shares used in the calculation of basic and diluted EPS (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
Weighted average shares for basic EPS	94,878	39,135	88,400	39,081
Dilutive effect of stock options				
Weighted average shares for diluted EPS	94,878	39,135	88,400	39,081

In connection with our common stock rights offering, as discussed in Note 4, we offered all shareholders the right to purchase additional shares at an offering price of \$3.50 per share. At the inception of our rights offering the offering price was lower than the fair value of our common stock, thus creating a bonus element which requires us to retroactively adjust the weighted average shares for basic EPS for all periods prior to the closing of the transaction. Therefore, we increased the number of weighted average common shares used in computing basic and diluted EPS for 2009 using an adjustment factor of 1.09.

Our restricted stock shares include rights to receive dividends that are not subject to the risk of forfeiture even if the underlying restricted stock shares on which the dividends were paid do not vest. In accordance with the *Earnings per Share* topic of the Codification, unvested share-based payment awards that contain non-forfeitable rights to dividends are deemed participating securities and should be considered in the calculation of basic EPS. Since the restricted stock shares do not include an obligation to share in

Table of Contents

losses, they will be included in our basic EPS calculation in periods of net income and excluded from our basic EPS calculation in periods of net loss. Accordingly, there were 1.8 million and 160,000 restricted stock shares excluded from the computations of basic EPS for the three and six months ended June 30, 2010 and 2009, respectively, because we generated a net loss. For the purpose of computing diluted EPS, options to purchase 6.1 million and 2.6 million shares of common stock were not included in the computations of diluted EPS for the three and six months ended June 30, 2010 and 2009, respectively, because their effect was anti-dilutive.

3. Receivables

Trade accounts receivable consisted of the following (in thousands):

	June 30, 2010	December 31, 2009
Trade receivables	\$ 83,172	\$ 65,606
Less: allowance for returns and doubtful accounts	3,646	4,883
Trade accounts receivable, net	\$ 79,526	\$ 60,723

Other receivables consisted of the following (in thousands):

	June 30, 2010	December 31, 2009
Income tax receivables	\$ 271	\$ 33,819
Other	3,653	5,939
Other receivables	\$ 3,924	\$ 39,758

4. Debt

Long-term debt consisted of the following (in thousands):

	June 30, 2010	December 31, 2009
Revolving credit facility	\$ 20,000	\$ 20,000
Floating rate notes:		
2012 notes	5,249	275,000
2016 notes	139,718	
Other	4,159	4,183
	169,126	299,183
Less: current portion of long-term debt	50	48
Total long-term debt, net of current maturities	\$ 169,076	\$ 299,135

On January 21, 2010, the Company completed a common stock rights offering and debt exchange for our Second Priority Senior Secured Floating Rate Notes due 2012 (2012 notes). As part of these transactions, the Company raised \$180.1 million of new equity capital through the issuance of 51,459,184 shares of common stock in the rights offering at a subscription price of \$3.50 per share. We used \$105.1 million of the proceeds from the rights offering to repurchase a portion of the 2012 notes in the debt exchange. We used a portion of the remaining \$75.0 million of proceeds to pay the expenses of the rights offering and the debt exchange and will use the remainder for general corporate purposes.

In the debt exchange, holders of the 2012 notes exchanged, at par, \$269.8 million aggregate principal amount of 2012 notes for (i) \$139.7 million aggregate principal amount of Second Priority Senior Secured Floating Rate Notes due 2016 (2016 notes), (ii) \$105.1 million in cash from the proceeds of the rights offering, and (iii) 7,112,244 shares of our common stock. As a result of the debt exchange, we reduced our indebtedness by \$130.0 million and extended the maturity of \$139.7 million of indebtedness until 2016. Upon closing of the rights offering and debt exchange, our funded debt was \$165.0 million, which consisted of \$20.0 million of outstanding borrowings under our senior secured revolving credit facility, \$139.7 million of 2016 notes, and \$5.3 million of our remaining 2012 notes. There was no gain or loss recognized on the extinguishment of the 2012 notes since the notes were exchanged at par value for cash and common stock which had a closing price on the transaction date that was equal to the exchange price of \$3.50 per share.

The \$139.7 million in aggregate principal amount of new second priority senior secured floating rate notes mature on February 15, 2016. Interest accrues on the floating rate notes at a rate of 3-month LIBOR (subject to a 3.0% floor) plus 10.0%. LIBOR is reset at the beginning of each quarterly period. Interest on the floating rate notes is payable quarterly in arrears. At any time we can redeem

Table of Contents

some or all of the notes at a redemption price equal to par plus a specified premium that declines ratably to par. In the event of a change in control, we may be required to offer to purchase the notes at a purchase price equal to 101% of the principal, plus accrued and unpaid interest. The resale of these notes was registered under the Securities Act.

The notes are jointly and severally guaranteed by all of the company's subsidiaries and collateralized by a pledge of common stock of certain of our subsidiaries and by a second priority lien on substantially all tangible and intangible property and interests in property and proceeds thereof now owned or hereafter acquired by us and substantially all of our subsidiaries. All of the subsidiaries are wholly-owned and domiciled in the United States. The parent company has no independent assets or operations, and the guarantees are full and unconditional. The indenture covering the 2016 notes contains certain restrictive covenants, which, among other things, relate to the payment of dividends, incurrence of indebtedness, repurchase of common stock or other distributions, asset sales and investments. At June 30, 2010, we were not in violation of any covenants.

In connection with our rights offering and debt exchange, we incurred approximately \$9.4 million of various third-party fees and expenses. Of the total costs incurred, \$0.5 million, net of insurance recoveries, related to the settlement of the consolidated class and derivative action lawsuit involving our initial recapitalization plans and \$2.6 million related primarily to expenses of the special committee formed to review and respond to the recapitalization proposal. Primarily all of these costs were incurred and expensed in 2009 as a component of selling, general and administrative expenses. The remaining \$6.3 million of costs incurred were considered to be directly related to the issuance of the common stock and the 2016 notes in the rights offering and debt exchange. These costs were allocated to the debt and equity based on their relative fair value to the total consideration issued in the transaction. Accordingly, \$3.7 million was allocated to the rights offering and recorded as a reduction to additional paid-in capital in the first quarter of 2010. The remaining \$2.6 million of costs were allocated to the 2016 notes and expensed primarily in the first quarter of 2010 as a component of interest expense, net, in the condensed consolidated statement of operations. The debt exchange was considered to be a modification, and therefore, any third-party costs were expensed as incurred. In addition, \$1.6 million of unamortized debt issue costs related to the 2012 notes that were extinguished as part of the transaction was expensed in the first quarter and also included in interest expense, net, in the condensed consolidated statement of operations. The remaining \$1.9 million of unamortized debt issue costs will be amortized over the term of the outstanding floating rate notes.

During the first quarter of 2009, we reduced the borrowing capacity under our 2007 Senior Secured Credit Agreement (the "2007 Agreement") from \$350 million to \$250 million, as we did not expect our borrowing base to support borrowings in excess of \$250 million at any point during the remaining life of this credit facility. This reduction also allowed us to reduce our interest expense related to commitment fees. Also as a result of this reduction, we expensed approximately \$1.2 million of deferred financing costs in the first quarter of 2009, as a component of interest expense, net, in the condensed consolidated statement of operations.

Loans under the 2007 Agreement are collateralized by substantially all of our assets, primarily accounts receivable and inventory, and are guaranteed by us and certain of our subsidiaries. Our net borrowing availability in excess of the \$35 million liquidity covenant at June 30, 2010 was \$16.6 million. The 2007 Agreement has certain restrictive covenants, which, among other things, relate to the payment of dividends, incurrence of indebtedness, and asset sales. The 2007 Agreement also has a fixed charge coverage ratio of 1:1 that is triggered if our available borrowing capacity, as determined under the borrowing base formula, is less than \$35 million. The calculation allows cash on deposit with the agent to be included as eligible borrowing base. At June 30, 2010, we were not required to have any cash on deposit with the agent since there was no short-fall in the calculation of the \$35 million minimum liquidity covenant. Based on our 2010 forecast, we will not meet the fixed charge coverage ratio, but we anticipate that we will not fall below the \$35 million minimum liquidity covenant in 2010 including the use of cash on deposit with the agent; therefore, we will not trigger the fixed charge coverage ratio requirement. The fixed charge coverage ratio is defined as the ratio of earnings before interest expenses, income taxes, depreciation and amortization expenses minus capital expenditures, cash taxes paid, dividends, distributions and share repurchases or redemptions to the sum of scheduled principal payments and interest expense on a trailing twelve month basis from the trigger date.

In the first quarter of 2008, we entered into three interest rate swap agreements with notional amounts of \$100 million, \$50 million, and \$50 million. We entered into these interest rate swaps in order to mitigate a portion of

the interest rate risk that we were exposed to in the normal course of business on our floating rate notes. The swap agreements, effective May 15, 2008, were for a term of three years. In conjunction with our debt exchange and resulting reduction in outstanding floating rate notes to \$145.0 million, we cancelled and settled one of our \$50 million swaps that had a fixed rate of 2.99% for \$1.7 million in December 2009. Under the remaining \$100 million and \$50 million swap agreements, we are paying fixed rates of 3.25% and 3.17%, respectively, and receiving a variable rate at 90 day LIBOR. In December 2009, we de-designated the remaining \$150 million of our swaps.

Table of Contents

The tables below present the effect of our interest rate swap derivatives on the condensed consolidated statements of operations for the three and six months ended June 30, 2010 and 2009 (in thousands):

Derivatives Designated as Hedging Instruments	Amount of Loss Recognized in OCI*				Location of Loss Reclassified from OCI into Income	Amount of Loss Reclassified from OCI Into Income*

		Three Months Ended June 30,		Six Months Ended June 30,	
		2010	2009	2010	2009
Interest rate swaps	Interest expense, net	\$ (665)	\$	\$ (2,271)	\$

* Net of tax

When our interest rate swap agreements are in a net asset position, we are exposed to credit losses in the event of non-performance by counterparties. The amount of such credit exposure is limited to the unrealized gains on our swaps. We have not experienced any credit loss as a result of counterparty nonperformance in the past. To manage credit risks, we generally select counterparties who are part of our banking syndicate and settle on a net basis. We perform a quarterly assessment of our counterparty credit risk, including a review of credit ratings, credit default swap rates, and potential nonperformance of the counterparty. Since the counterparty is part of the bank syndicate, we also would have the ability to net amounts owed to us against any outstanding borrowings under the 2007 Agreement, thereby reducing the credit risk.

When interest rate swap agreements are in a net liability position, we are required to establish a reserve against our borrowing base equal to 110% of the fair value of the interest rate swaps on the last day of the month. This reserve effectively reduces our available borrowing capacity under the 2007 Agreement. At June 30, 2010, the reserve for the swaps was \$4.3 million. The swaps are also collateralized in a manner similar to the loans under the 2007 Agreement. In the event of default, or if we or the counterparty fail to be part of the 2007 Agreement, an early termination event would be triggered which could require us to settle the swaps on the termination date at the then fair market value.

The *Fair Value Measurements and Disclosures* topic of the Codification provides a framework for measuring the fair value of assets and liabilities and establishes a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The fair value hierarchy can be summarized as follows:

- Level 1 unadjusted quoted prices for identical assets or liabilities in active markets accessible by us
- Level 2 inputs that are observable in the marketplace other than those inputs classified as Level 1
- Level 3 inputs that are unobservable in the marketplace and significant to the valuation

If a financial instrument uses inputs that fall in different levels of the hierarchy, the instrument will be categorized based upon the lowest level of input that is significant to the fair value calculation.

The only financial instruments measured at fair value on a recurring basis are our interest rate swaps. We do not trade in swaps or hold them for speculative purposes, therefore, the retail market that exists for swaps would be the

most advantageous market for our interest rate swaps. As such, we use the market approach to value our interest rate swaps by obtaining a quote from the counterparty that is based on a discounted cash flow analysis which incorporates information obtained from third-party market sources and is adjusted for company specific credit risk. We validate the fair value quote obtained from the counterparty by using an independent, third-party discounted cash flow analysis which also utilizes market information. These discounted cash flow techniques incorporate Level 1 and Level 2 inputs. In addition to the term and notional amount inputs, the valuation also factors in discount rate, forward yield curves, and credit risk. Significant inputs to the derivative valuation for interest rate swaps are observable in the active markets and are classified as Level 2 in the hierarchy.

Table of Contents

The following fair value hierarchy table presents information about the Company's financial instruments measured at fair value on a recurring basis using significant other observable inputs (Level 2) (in thousands):

	Carrying Value	Fair Value Measurement as of	Carrying Value	Fair Value Measurement as of
	As of June 30, 2010	June 30, 2010	As of December 31, 2009	December 31, 2009
Interest rate swaps (included in Total liabilities)	\$ 3,892	\$ 3,892	\$ 5,314	\$ 5,314

We have elected to continue to report the value of our floating rate notes at amortized cost. The floating rate notes are registered and publicly traded. The carrying value of the floating rate notes at June 30, 2010 approximated fair value. The carrying value of amounts outstanding under the 2007 Agreement also approximated fair value.

5. Comprehensive Loss

The following table presents the components of comprehensive loss for the three and six months ended June 30, 2010 and 2009 (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
Net loss	\$ (19,039)	\$ (22,604)	\$ (50,425)	\$ (53,182)
Other comprehensive income change related to interest rate swap agreements, net of related tax effect	664	1,028	1,447	945
Total comprehensive loss	\$ (18,375)	\$ (21,576)	\$ (48,978)	\$ (52,237)

6. Discontinued Operations

In the second quarter of 2009, we announced our intent to exit the entire Ohio market based upon several factors including the unfavorable conditions that affected our industry and a poor competitive position which prevented us from generating profitable results. The cessation of operations in this market was treated as a discontinued operation as it had distinguishable cash flow and operations that were eliminated from our ongoing operations. As a result, the operating results of the Ohio market were presented as discontinued operations in the condensed consolidated statements of operations. Also included in loss from discontinued operations, net of tax, were the operating results of our New Jersey market which we exited in December 2008.

As part of the plan to exit the Ohio market, in the second quarter of 2009 we expensed \$1.7 million primarily related to future lease obligations on closed facilities, net of estimated sub-rental lease income, and employee severance. We also sold inventory, machinery and equipment with a net book value of approximately \$1.0 million for cash proceeds of \$0.6 million, resulting in a loss on the sale of these assets of \$0.4 million. These amounts were included in loss from discontinued operations, net of tax, in the accompanying condensed consolidated statements of operations.

The facility and other exit cost reserves related to our discontinued operations in Ohio and New Jersey were \$2.3 million at June 30, 2010, of which \$1.8 million was recorded as other long-term liabilities.

7. Employee Stock-based Compensation

In January 2010, our shareholders approved an amendment to our 2007 Incentive Plan (2007 Plan) which increased the number of shares of common stock that may be granted pursuant to awards under the 2007 Plan from 2.5 million shares to 7.0 million shares. On February 3, 2010, our board of directors granted 3,945,000 stock options and 1,800,000 shares of restricted stock to employees under our 2007 Plan. All the awards vest in one-third installments

Edgar Filing: Builders FirstSource, Inc. - Form 10-Q

on the second, third and fourth anniversaries of the grant date. The grant date fair value for the restricted stock and the exercise price for the options was \$3.19 per share, which was the closing stock price on the grant date. The grant date fair value of the options was \$2.54 and was determined using the following assumptions:

Expected life	6 years
Expected volatility	99.28%
Expected dividend yield	0.00%
Risk-free rate	2.97%

Table of Contents**8. Income Taxes**

In accordance with the *Income Taxes* topic of the Codification, we evaluate our deferred tax assets quarterly to determine if a valuation allowance is required. The *Income Taxes* topic requires that companies assess whether valuation allowances should be established based on the consideration of all available evidence. During the three and six months ended June 30, 2010, we recorded valuation allowances of \$7.1 and \$18.7 million against the net deferred tax assets generated from the net losses during the periods related to our continuing operations. During the three months ended June 30, 2009, we recorded a valuation allowance of \$8.4 million against the net deferred tax assets generated from the net loss during the period, of which \$6.6 million related to continuing operations and \$1.8 million related to discontinued operations. During the six months ended June 30, 2009, we recorded a valuation allowance of \$21.4 million against the net deferred tax assets generated from the net loss during the period, of which \$18.8 million related to continuing operations and \$2.6 million related to discontinued operations.

To the extent we generate sufficient taxable income in the future to fully utilize the tax benefits of the net deferred tax assets on which a valuation allowance is recorded, our effective tax rate may decrease as the valuation allowance is reversed. However, to the extent we generate future operating losses, we would be required to increase the valuation allowance on our net deferred tax assets and our income tax expense will be adversely affected.

We received federal income tax refunds of \$33.8 million and \$31.8 million in the second quarters of 2010 and 2009, respectively.

9. Commitments and Contingencies

We are a party to various legal proceedings in the ordinary course of business. Although the ultimate disposition of these proceedings cannot be predicted with certainty, management believes the outcome of any claim that is pending or threatened, either individually or on a combined basis, will not have a material adverse effect on our consolidated financial position, cash flows or results of operations. However, there can be no assurances that future costs would not be material to our results of operations or liquidity for a particular period.

10. Segment and Product Information

We have three regional operating segments Atlantic, Southeast and Central with centralized financial and operational oversight. We believe that these operating segments meet the aggregation criteria prescribed in the *Segment Reporting* topic of the Codification, and thus have one reportable segment.

Sales by product category for the three and six month periods ended June 30, 2010 and 2009 were as follows (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
Prefabricated components	\$ 41,181	\$ 35,127	\$ 73,151	\$ 64,080
Windows & doors	46,448	43,027	83,385	82,930
Lumber & lumber sheet goods	66,199	39,480	110,587	78,408
Millwork	21,797	18,861	39,575	35,338
Other building products & services	35,858	38,987	66,158	74,302
Total sales	\$ 211,483	\$ 175,482	\$ 372,856	\$ 335,058

11. Recent Accounting Pronouncements

In January 2010, the FASB issued guidance under the *Fair Value Measurements and Disclosures* topic of the Codification which requires, in both interim as well as annual financial statements, for assets and liabilities that are measured at fair value on a recurring basis, disclosures regarding the valuation techniques and inputs used to develop those measurements. It also requires separate disclosures of significant amounts transferred in and out of Level 1 and Level 2 fair value measurements and a description of the reasons for the transfers. We have adopted these provisions and included all required disclosures.

In October 2009, the FASB issued guidance under the *Multiple Element Revenue Arrangements* topic of the Codification which requires separation of the consideration received in such arrangements by establishing a selling price hierarchy for determining the selling price of a deliverable, which will be based on available information in the following order: vendor-specific objective evidence,

Table of Contents

third-party evidence, or estimated selling price. It also eliminates the residual method of allocation, requires that the consideration be allocated at the inception of the arrangement to all deliverables using the relative selling price method, which allocates any discount in the arrangement to each deliverable on the basis of each deliverable's selling price, and requires that a vendor determine its best estimate of selling price in a manner that is consistent with that used to determine the price to sell the deliverable on a standalone basis. These changes become effective for us on January 1, 2011. We are currently reviewing the impact of these changes on our financial statements, but we do not expect these changes to have a material impact on our financial position or results of operations.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion of our financial condition and results of operations should be read in conjunction with the Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and notes thereto for the year ended December 31, 2009 included in our most recent annual report on Form 10-K. The following discussion and analysis should also be read in conjunction with the unaudited condensed consolidated financial statements appearing elsewhere in this report. In this quarterly report on Form 10-Q, references to the company, we, our, ours or us refer to Builders FirstSource, Inc. and its consolidated subsidiaries unless otherwise stated or the context otherwise requires.

Cautionary Statement

Statements in this report which are not purely historical facts or which necessarily depend upon future events, including statements regarding our anticipations, beliefs, expectations, hopes, intentions or strategies for the future, may be forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended. All forward-looking statements in this report are based upon information available to us on the date of this report. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. Any forward-looking statements made in this report involve risks and uncertainties that could cause actual events or results to differ materially from the events or results described in the forward-looking statements. Readers are cautioned not to place undue reliance on these forward-looking statements. In addition, oral statements made by our directors, officers and employees to the investor and analyst communities, media representatives and others, depending upon their nature, may also constitute forward-looking statements. As with the forward-looking statements included in this report, these forward-looking statements are by nature inherently uncertain, and actual results may differ materially as a result of many factors. Further information regarding the risk factors that could affect our financial and other results are included as Item 1A of our annual report on Form 10-K.

COMPANY OVERVIEW

We are a leading supplier and manufacturer of structural and related building products for residential new construction in the U.S. We offer an integrated solution to our customers providing manufacturing, supply and installation of a full range of structural and related building products. Our manufactured products include our factory-built roof and floor trusses, wall panels and stairs, aluminum and vinyl windows, custom millwork and trim, as well as engineered wood that we design and cut for each home. We also assemble interior and exterior doors into pre-hung units. Additionally, we supply our customers with a broad offering of professional grade building products not manufactured by us, such as dimensional lumber and lumber sheet goods, various window, door and millwork lines, as well as cabinets, roofing and gypsum wallboard. Our full range of construction-related services includes professional installation, turn-key framing and shell construction, and spans all our product categories.

We group our building products into five product categories:

Prefabricated Components. Our prefabricated components consist of wood floor and roof trusses, steel roof trusses, wall panels, stairs, and engineered wood.

Windows & Doors. Our windows & doors category is comprised of the manufacturing, assembly, and distribution of windows and the assembly and distribution of interior and exterior door units.

Lumber & Lumber Sheet Goods. Lumber & lumber sheet goods include dimensional lumber, plywood, and OSB products used in on-site house framing.

Millwork. Millwork includes interior trim, exterior trim, columns and posts that we distribute, as well as custom exterior features that we manufacture under the Synboard® brand name.

Other building products & services. Other building products & services are comprised of products such as cabinets, gypsum, roofing and insulation and services such as turn-key framing, shell construction, design assistance, and professional installation spanning all of our product categories.

Our operating results are dependent on the following trends, events and uncertainties, some of which are beyond our control:

Homebuilding Industry. Our business is driven primarily by the residential new construction market, which is in turn dependent upon a number of factors, including interest rates, consumer confidence, foreclosure rates, and the health of the economy and

Table of Contents

mortgage markets. Over the past few years, many homebuilders significantly decreased their starts because of the economic recession, lower demand and an excess of home inventory. Although housing starts increased in the current quarter because of the federal tax credit for first-time homebuyers, we do not expect building activity to be strong in the back half of 2010. We also expect to see continued declines in the number of units under construction for the remainder of the year. Due to this decline and the recent volatility in commodity prices, we have experienced, and may continue to experience, significant pressure on our gross margins. However, we still believe there are several meaningful trends that indicate U.S. housing demand will likely recover in the long term. These trends include relatively low interest rates, the aging of housing stock, and normal population growth due to birthrate exceeding death rate. We believe that the current downturn in the housing industry, though prolonged and severe, is likely a trough in the cyclical nature of the residential construction industry.

Targeting Large Production Homebuilders. In recent years, the homebuilding industry has undergone significant consolidation, with the larger homebuilders substantially increasing their market share. We expect that trend to continue during this housing correction due to the better liquidity positions of the larger homebuilders relative to the smaller, less capitalized homebuilders. Our focus is on maintaining relationships and market share with these customers while balancing the competitive pressures we are facing in our markets with certain profitability expectations. Our sales to the Builder 100, the country's largest 100 homebuilders, increased 47.0% during the six months ended June 30, 2010 compared to the same period of the prior year, which is higher than the 26.7% overall increase in housing starts within our markets during the same time period. We expect that our ability to maintain strong relationships with the largest builders will be vital to our ability to grow and expand into new markets as well as maintain our current market share through the downturn. Additionally, during the downturn, we will continue to expand our custom homebuilder base, but this growth may be limited by our tight credit standards.

Expand into Multi-Family and Light Commercial Business. We have diversified, and will continue to attempt to diversify our customer base and grow our sales by further expanding into multi-family and light commercial business. While we primarily serve the single family new home construction market, we have entered the multi-family and/or light commercial market in certain regions. Our Shelby, Alabama location gives us the ability to manufacture steel roof trusses often used in multi-family and light commercial construction.

Use of Prefabricated Components. Prior to the housing downturn, homebuilders were increasingly using prefabricated components in order to realize increased efficiency and improved quality. Shortening cycle time from start to completion was a key imperative of the homebuilders during periods of strong consumer demand. With the housing downturn, that trend decelerated as cycle time had less relevance. Customers who traditionally used prefabricated components, for the most part, still do. However, the conversion of customers to this product offering has slowed. We will continue to monitor our manufacturing capacity to ensure we are operating efficiently given the current market conditions.

Economic Conditions. Economic changes both nationally and locally in our markets impact our financial performance. The building products supply industry is highly dependent upon new home construction and subject to cyclical market changes. Our operations are subject to fluctuations arising from changes in supply and demand, national economic conditions, labor costs, competition, government regulation, trade policies and other factors that affect the homebuilding industry such as demographic trends, interest rates, single-family housing starts, employment levels, consumer confidence, and the availability of credit to homebuilders, contractors, and homeowners. During 2007, the mortgage markets experienced substantial disruption due to increased defaults, primarily as a result of credit quality deterioration. The disruption resulted in reduced availability of mortgages for potential homebuyers due to an illiquid credit market and more restrictive standards to qualify for mortgages. During 2008, the conditions in the credit markets worsened and the economy fell into a recession. The credit markets and financial services industry experienced a significant crisis characterized by the bankruptcy or failure of various financial institutions and severe limitations on credit availability. As a result, the credit markets became highly illiquid as financial and lending institutions limited credit to conserve cash and protect their balance sheets. These economic conditions continued, to a lesser

extent, into 2009 and 2010. As the housing industry is dependent upon potential homebuyers' access to mortgage financing and homebuilders' access to commercial credit, it is likely that the housing industry will not fully recover until conditions in the credit markets substantially improve.

Cost of Materials. Prices of wood products, which are subject to cyclical market fluctuations, may adversely impact operating income when prices rapidly rise or fall within a relatively short period of time. We purchase certain materials, including lumber products, which are then sold to customers as well as used as direct production inputs for our manufactured and prefabricated products. Short-term changes in the cost of these materials, some of which are subject to significant fluctuations, are sometimes passed on to our customers, but our pricing quotation periods may limit our ability to pass on such price changes. We may also be limited in our ability to pass on increases in in-bound freight costs on our products due to the price of fuel. Our inability to pass on material and freight price increases to our customers could adversely impact our operating income.

Table of Contents

Controlling Expenses. Another important aspect of our strategy is controlling costs and enhancing our status as a low-cost building materials supplier in the markets we serve. We pay close attention to managing our working capital and operating expenses. We have a best practices operating philosophy, which encourages increasing efficiency, lowering costs, improving working capital, and maximizing profitability and cash flow. We constantly analyze our workforce productivity to achieve the optimum, cost-efficient labor mix for our facilities. Further, we pay careful attention to our logistics function and its effect on our shipping and handling costs.

CURRENT OPERATING CONDITIONS AND OUTLOOK

We saw improved building activity and increased sales during the second quarter of 2010. Fueled by the federal income tax credit for first-time homebuyers, the annualized rate for U.S. single-family starts increased to 563,000 as of April, but fell to 454,000 as of June, down 4.6% from one year ago, as the tax credit expired. For the current quarter, actual U.S. single-family housing starts were 142,000, up 14.8% from the same quarter last year, but the number of single-family units under construction fell 6.6%. The industry continues to experience delays in housing starts moving to units under construction.

While our sales were up in the second quarter, extremely volatile commodity prices coupled with intensely competitive pricing conditions had a negative impact on gross margins. Commodity prices rose over 22% from the end of March through the end of April, and then fell sharply, decreasing 35% from the end of April through the end of June. This volatility in commodity markets, combined with excess capacity in the supply chain chasing a limited number of units under construction, contributed to our gross margins declining 4.0 percentage points compared to the second quarter of 2009. From an operating expense perspective, we continued our focus on controlling costs as selling, general and administrative expenses increased only 2.2% compared to an 11.2% increase in sales volume.

An extremely volatile commodity market during the current quarter added to what was already one of the toughest housing markets in our nation's history. Through these challenging conditions, we remain focused on prudently managing our cash and positioning the company to take advantage of a housing recovery. We ended the second quarter with approximately \$125 million in cash and over \$141 million of available liquidity, as we had \$16.6 million of net borrowing availability under our revolver. Our use of cash through June is consistent with forecast, and we believe seasonal reductions in working capital will help reduce our use of cash over the remainder of the year.

We still believe that the long-term outlook for the housing industry is positive due to the growth in the underlying demographics, though there still appears to be a significant amount of uncertainty in the macro-economic factors that drive our business. We plan to continue managing our business in the same conservative manner we have used over the past several years and will do so until greater clarity returns to the homebuilding sector.

SEASONALITY AND OTHER FACTORS

Our first and fourth quarters have historically been, and are expected to continue to be, adversely affected by weather patterns in some of our markets, causing reduced construction activity. In addition, quarterly results historically have reflected, and are expected to continue to reflect, fluctuations from period to period arising from the following:

- The volatility of lumber prices;
- The cyclical nature of the homebuilding industry;
- General economic conditions in the markets in which we compete;
- The pricing policies of our competitors;
- The production schedules of our customers; and
- The effects of weather.

The composition and level of working capital typically change during periods of increasing sales as we carry more inventory and receivables. Working capital levels typically increase in the second and third quarters of the year due to higher sales during the peak

Table of Contents

residential construction season. These increases have in the past resulted in negative operating cash flows during this peak season, which generally have been financed through available cash. Collection of receivables and reduction in inventory levels following the peak building and construction season have in the past helped to partially offset this negative cash flow. We have also from time to time utilized our credit facility to cover working capital needs.

RESULTS OF OPERATIONS

The following table sets forth, for the three and six months ended June 30, 2010 and 2009, the percentage relationship to sales of certain costs, expenses and income items:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
Sales	100.0%	100.0%	100.0%	100.0%
Cost of sales	81.7%	77.7%	81.7%	78.3%
Gross margin	18.3%	22.3%	18.3%	21.7%
Selling, general and administrative expenses	24.3%	28.7%	27.1%	30.6%
Facility closure costs	0.0%	0.4%	0.0%	0.3%
Asset impairments	0.0%	0.3%	0.0%	0.1%
Loss from operations	(6.0)%	(7.1)%	(8.8)%	(9.3)%
Interest expense, net	3.1%	3.4%	4.8%	4.1%
Income tax (benefit) expense	(0.2)%	0.1%	(0.1)%	0.7%
Loss from continuing operations	(8.9)%	(10.6)%	(13.5)%	(14.1)%
Loss from discontinued operations, net of tax	(0.1)%	(2.3)%	(0.0)%	(1.8)%
Net loss	(9.0)%	(12.9)%	(13.5)%	(15.9)%

Three Months Ended June 30, 2010 Compared with the Three Months Ended June 30, 2009

Sales. Sales for the three months ended June 30, 2010 were \$211.5 million, a 20.5% increase from sales of \$175.5 million for the three months ended June 30, 2009. For the three months ended June 30, 2010, actual U.S. single-family housing starts increased 14.8%, however, the number of single-family units under construction declined 6.6% over this same time period. We increased our sales to the Builder 100 by 41.3% over the same time period last year. Market prices for lumber and lumber sheet goods were on average 57.4% higher than the same period a year ago. Commodity and manufactured product sales increased by approximately \$33 million, or 43.9%, quarter over quarter, partly due to volume and partly due to price inflation. This increase was partially offset by a decline in sales of other building products and services of approximately \$3.1 million as a result of a reduction in installed services and multi-family construction.

The following table shows sales classified by product category (dollars in millions):

	Three Months Ended June 30,		2009		
	2010	% of Sales	2009	% of Sales	% Change
Prefabricated components	\$ 41.2	19.5%	\$ 35.1	20.0%	17.2%
Windows & doors	46.4	22.0%	43.0	24.5%	8.0%
Lumber & lumber sheet goods	66.2	31.3%	39.5	22.5%	67.7%
Millwork	21.8	10.3%	18.9	10.7%	15.6%
Other building products & services	35.9	16.9%	39.0	22.3%	(8.0)%

Total sales	\$ 211.5	100.0%	\$ 175.5	100.0%	20.5%
-------------	----------	--------	----------	--------	-------

Gross Margin. Gross margin decreased \$0.4 million to \$38.7 million. Our gross margin percentage decreased from 22.3% in the second quarter of 2009 to 18.3% in the current quarter, a 4.0 percentage point decline. Our gross margin percentage decreased by 4.8 percentage points due to price, partially offset by a 0.8 percentage point improvement in margin due to sales volume. We experienced extremely volatile commodity prices, coupled with intensely competitive pricing conditions, during the quarter, which negatively impacted our gross margins.

Table of Contents

Selling, General and Administrative Expenses. Selling, general and administrative expenses increased \$1.1 million, or 2.2%. As a percentage of total sales, however, these expenses decreased from 28.7% in 2009 to 24.3% in 2010. Our salaries and benefits expense, excluding stock compensation expense, was \$29.8 million, or 14.1% of total sales, compared to \$28.7 million, or 16.4% of total sales in the second quarter of 2009. Our office general and administrative expense increased \$0.4 million quarter over quarter, but decreased as a percentage of total sales, down to 2.5% in 2010 from 2.8% in 2009. Occupancy expenses decreased \$0.6 million, or 11.1%, and our bad debt expense decreased \$0.6 million. Delivery expenses increased \$0.5 million due to higher fuel costs and increased sales volume. We continue to monitor our operating cost structure closely and make adjustments as necessary.

Interest Expense, Net. Interest expense was \$6.5 million in the second quarter of 2010, an increase of \$0.4 million from the second quarter of 2009. The increase was primarily due to higher interest rates during the current quarter and partially offset by lower average debt balances.

Income Tax (Benefit) Expense. We recorded an income tax benefit of \$0.3 million during the quarter compared to \$0.1 million of expense in the second quarter of 2009. We recorded an after-tax, non-cash valuation allowance of \$7.1 million and \$6.6 million, in 2010 and 2009, respectively, related to our net deferred tax assets. Absent this valuation allowance, our tax benefit rate would have been 38.5% and 35.2% in 2010 and 2009, respectively.

Six Months Ended June 30, 2010 Compared with the Six Months Ended June 30, 2009

Sales. Sales for the six months ended June 30, 2010 were \$372.9 million, an 11.3% increase from sales of \$335.1 million for the six months ended June 30, 2009. For the six months ended June 30, 2010, actual U.S. single-family housing starts increased approximately 27%, however, units under construction declined approximately 12% over the same time period. We increased our sales to the Builder 100 by 47.0% over the same period last year. Market prices for lumber and lumber sheet goods were on average 52.8% higher than the same period a year ago. Commodity and manufactured product sales increased by approximately \$41 million, or 28.9%, year over year partly due to volume and partly due to price inflation. This increase was offset by a decline in sales of other building products and services of approximately \$8.1 million for the six months ended June 30, 2010 compared to the same time period last year.

The following table shows sales classified by product category (dollars in millions):

	Six Months Ended June 30,				
	2010		2009		
	Sales	% of Sales	Sales	% of Sales	% Change
Prefabricated components	\$ 73.1	19.6%	\$ 64.1	19.1%	14.2%
Windows & doors	83.4	22.4%	82.9	24.8%	0.5%
Lumber & lumber sheet goods	110.6	29.7%	78.4	23.4%	41.0%
Millwork	39.6	10.6%	35.4	10.5%	12.0%
Other building products & services	66.2	17.7%	74.3	22.2%	(11.0)%
Total sales	\$ 372.9	100.0%	\$ 335.1	100.0%	11.3%

Gross Margin. Gross margin decreased \$4.6 million to \$68.2 million. Our gross margin percentage decreased from 21.7% in the first six months of 2009 to 18.3% in the current period, a 3.4 percentage point decline. Our gross margin percentage decreased 4.1 percentage points due to price, slightly offset by an increase in sales volume and a shift in sales mix. Our gross margins were negatively impacted by the volatile commodity prices and intense pricing pressure we experienced during the first six months of the current year.

Selling, General and Administrative Expenses. Selling, general and administrative expenses decreased \$1.5 million, or 1.5%. As a percentage of total sales, these expenses decreased from 30.6% in 2009 to 27.1% in 2010. Our salaries and benefits expense, excluding stock compensation expense, was \$57.9 million, or 15.5% of total sales, compared to \$57.2 million, or 17.1% of total sales in the first six months of 2009. Our office general and administrative expense decreased \$0.3 million year over year, down to 2.8% of total sales in 2010 from 3.2% in 2009.

Occupancy expenses decreased \$1.2 million, or 11.2%, and our bad debt expense decreased \$1.3 million. Delivery expenses increased \$0.7 million due primarily to higher fuel costs and increased sales volume.

Interest Expense, Net. Interest expense was \$17.9 million in 2010, an increase of \$4.2 million. The increase was primarily due to the write-off of \$1.6 million of unamortized debt issuance costs related to long-term debt repaid and \$2.5 million of costs incurred related to our recapitalization transaction in the first quarter of 2010. Interest expense also increased by \$0.8 million due to fair value

Table of Contents

adjustments on our interest rate swaps in 2010. These increases were partially offset by \$1.2 million of debt issuance cost write-offs in the first quarter of 2009 related to the capacity reduction of our revolving credit facility.

Income Tax (Benefit) Expense. We recorded an income tax benefit of \$0.5 million for the first six months of 2010 compared to \$2.2 million of expense for 2009. We recorded an after-tax, non-cash valuation allowance of \$18.7 million and \$18.8 million, in 2010 and 2009, respectively, related to our net deferred tax assets. Absent this valuation allowance, our tax benefit rate would have been 37.9% and 36.9% in 2010 and 2009, respectively.

LIQUIDITY AND CAPITAL RESOURCES

Availability under our \$250 million revolving credit facility is determined by a borrowing base. The following table shows our borrowing base, excess availability, borrowing availability and fixed charge coverage ratio as of June 30, 2010 and December 31, 2009 (in millions):

	June 30, 2010	As of December 31, 2009
Accounts Receivable Availability	\$ 63.9	\$ 42.3
Inventory Availability	27.2	18.7
Equipment Availability	3.5	4.1
Gross Availability	94.6	65.1
Less:		
Agent Reserves	(7.4)	(8.5)

Actual Fixed Charge Coverage Ratio	-1.87x	-1.68x
Required Fixed Charge Coverage Ratio*	1.00x	1.00x

* Required only if excess availability falls below \$35 million.

Our borrowing base consists of trade accounts receivable, inventory and fixed assets, which meet specific criteria contained within the credit agreement, minus agent specified reserves. Our net borrowing base availability at June 30, 2010 was \$16.6 million, and as such, we were not required to have any cash on deposit with the agent to meet the

\$35 million excess availability requirement contained within the revolving senior secured credit agreement. Excess availability is the sum of borrowing base plus qualified cash, defined as cash on deposit with the agent subject to a control agreement, minus outstanding borrowings and letters of credit. This amount must equal or exceed \$35 million at the monthly reporting dates or we are required to meet a fixed charge coverage ratio of 1 to 1, which we currently would not meet.

Future declines in our borrowing base, if any, could compel us to either repay outstanding borrowings under the senior secured revolving credit facility or increase our cash on deposit with the agent in order to meet the excess availability requirement. At June 30, 2010, we had \$124.6 million of unencumbered cash that can be used to either repay the \$35.6 million currently funded under the facility or support any shortfall in the net borrowing base availability. At June 30, 2010, we were not in violation of any covenants or restrictions imposed by any of our debt agreements.

At June 30, 2010, we had \$124.6 million of usable cash and \$16.6 million of net borrowing base availability, which we believe is sufficient to meet our anticipated needs, including contractual obligations, for the next twelve months. We do not expect working capital or our credit facility to be a significant source of funds for the next twelve months. Based upon current economic conditions,

Table of Contents

we do not expect building activity to be as strong in the back half of 2010 as had been anticipated, therefore our use of cash for fiscal 2010 is expected to be in the range of \$70-\$75 million, which is somewhat higher than originally forecasted. Our projected cash use is subject to change, and will be influenced by actual housing activity over the next twelve months, commodity prices, gross margins, as well as customer and supplier responses to our changing liquidity position. Additional cash could be used if we choose to pursue strategic acquisition opportunities that may become available. Since the housing downturn began, we have continued our focus on protecting our liquidity. Our action plan, which consists of generating new business, reducing physical capacity, adjusting staffing levels, implementing cost containment programs, managing credit tightly, and most importantly, conserving cash has allowed us to limit the effects of the difficult industry conditions. We will continue to execute this strategy as long as these conditions persist.

In January 2010, we completed our rights offering and debt exchange which resulted in us reducing our indebtedness by \$130.0 million and extended the maturity of \$139.7 million of indebtedness until 2016. In addition, we received net proceeds of approximately \$65 million, after paying for expenses related to the transaction, which will be used for general corporate purposes (See Note 4).

Consolidated Cash Flows

Cash used in operating activities was \$22.4 million for the six months ended June 30, 2010 compared to cash provided by operating activities of \$25.9 for the six months ended June 30, 2009. This includes federal income tax refunds of \$33.8 million and \$31.8 million received in the second quarters of 2010 and 2009, respectively. The increase in cash used was primarily driven by an increase in working capital of \$19.5 million during the first six months of 2010 compared to a decrease in working capital of \$31.3 million during the same period last year. The change in working capital is the result of improved sales, higher commodity prices, and increased inventory buys to cover fixed customer pricing arrangements.

During the six months ended June 30, 2010 and 2009, cash used in investing activities was \$6.4 million and \$0.5 million, respectively. Capital expenditures increased \$4.7 million as we continued buying out expiring vehicle and equipment leases. In addition, proceeds from the sale of assets decreased \$1.2 million as the company actively sold off excess equipment in the prior year.

For the six months ended June 30, 2010, cash provided by financing activities was \$69.3 million, primarily due to the net proceeds received upon completion of our rights offering and debt exchange in the first quarter of 2010. For the six months ended June 30, 2009, cash used in financing activities was \$20.1 million, the result of a \$20.0 million pay down of the revolving credit facility.

RECENT ACCOUNTING PRONOUNCEMENTS

In January 2010, the FASB issued guidance under the *Fair Value Measurements and Disclosures* topic of the Codification which requires, in both interim as well as annual financial statements, for assets and liabilities that are measured at fair value on a recurring basis, disclosures regarding the valuation techniques and inputs used to develop those measurements. It also requires separate disclosures of significant amounts transferred in and out of Level 1 and Level 2 fair value measurements and a description of the reasons for the transfers. We have adopted these provisions and included all required disclosures.

In October 2009, the FASB issued guidance under the *Multiple Element Revenue Arrangements* topic of the Codification which requires separation of the consideration received in such arrangements by establishing a selling price hierarchy for determining the selling price of a deliverable, which will be based on available information in the following order: vendor-specific objective evidence, third-party evidence, or estimated selling price. It also eliminates the residual method of allocation, requires that the consideration be allocated at the inception of the arrangement to all deliverables using the relative selling price method, which allocates any discount in the arrangement to each deliverable on the basis of each deliverable's selling price, and requires that a vendor determine its best estimate of selling price in a manner that is consistent with that used to determine the price to sell the deliverable on a standalone basis. These changes become effective for us on January 1, 2011. We are currently reviewing the impact of these changes on our financial statements, but we do not expect these changes to have a material impact on our financial position or results of operations.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

We experience changes in interest expense when market interest rates change. Changes in our debt could also increase these risks. We utilize interest rate swap contracts to fix interest rates on a portion of our outstanding long-term debt balances. Based on debt outstanding at June 30, 2010 and interest rate swap contracts in place at June 30, 2010, a 1.0% increase in interest rates would result in approximately \$0.2 million of additional interest expense annually.

Table of Contents

We purchase certain materials, including lumber products, which are then sold to customers as well as used as direct production inputs for our manufactured products that we deliver. Short-term changes in the cost of these materials, some of which are subject to significant fluctuations, are sometimes, but not always, passed on to our customers. Our delayed ability to pass on material price increases to our customers can adversely impact our operating income.

Item 4. Controls and Procedures

Controls Evaluation and Related CEO and CFO Certifications. Our management, with the participation of our principal executive officer (CEO) and principal financial officer (CFO), conducted an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures as of the end of the period covered by this quarterly report. The controls evaluation was conducted by our Disclosure Committee, comprised of senior representatives from our finance, accounting, internal audit, and legal departments under the supervision of our CEO and CFO.

Certifications of our CEO and our CFO, which are required in accordance with Rule 13a-14 of the Securities Exchange Act of 1934, as amended (Exchange Act), are attached as exhibits to this quarterly report. This Controls and Procedures section includes the information concerning the controls evaluation referred to in the certifications, and it should be read in conjunction with the certifications for a more complete understanding of the topics presented.

Limitations on the Effectiveness of Controls. We do not expect that our disclosure controls and procedures will prevent all errors and all fraud. A system of controls and procedures, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the system are met. Because of the limitations in all such systems, no evaluation can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. Furthermore, the design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how unlikely. Because of these inherent limitations in a cost-effective system of controls and procedures, misstatements or omissions due to error or fraud may occur and not be detected.

Scope of the Controls Evaluation. The evaluation of our disclosure controls and procedures included a review of their objectives and design, the Company's implementation of the controls and procedures and the effect of the controls and procedures on the information generated for use in this quarterly report. In the course of the evaluation, we sought to identify whether we had any data errors, control problems or acts of fraud and to confirm that appropriate corrective action, including process improvements, were being undertaken if needed. This type of evaluation is performed on a quarterly basis so that conclusions concerning the effectiveness of our disclosure controls and procedures can be reported in our quarterly reports on Form 10-Q. Many of the components of our disclosure controls and procedures are also evaluated by our internal audit department, our legal department and by personnel in our finance organization. The overall goals of these various evaluation activities are to monitor our disclosure controls and procedures on an ongoing basis and to maintain them as dynamic systems that change as conditions warrant.

Conclusions Regarding Disclosure Controls. Based on the required evaluation of our disclosure controls and procedures, our CEO and CFO have concluded that, as of June 30, 2010, we maintain disclosure controls and procedures that are effective in providing reasonable assurance that information required to be disclosed by us in the reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms and that such information is accumulated and communicated to our management, including our CEO and CFO, as appropriate, to allow timely decisions regarding required disclosure.

Changes in Internal Control Over Financial Reporting. During the period covered by this report, there have been no changes in our internal control over financial reporting identified in connection with the evaluation described above that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II OTHER INFORMATION

Item 1. *Legal Proceedings*

We are involved in various claims and lawsuits incidental to the conduct of our business in the ordinary course. We carry insurance coverage in such amounts in excess of our self-insured retention as we believe to be reasonable under the circumstances and that may or may not cover any or all of our liabilities in respect of claims and lawsuits. We do not believe that the ultimate resolution of these matters will have a material adverse impact on our consolidated financial position, cash flows or results of operations.

Although our business and facilities are subject to federal, state and local environmental regulation, environmental regulation does not have a material impact on our operations. We believe that our facilities are in material compliance with such laws and regulations. As owners and lessees of real property, we can be held liable for the investigation or remediation of contamination on such properties, in some circumstances without regard to whether we knew of or were responsible for such contamination. Our current expenditures with respect to environmental investigation and remediation at our facilities are minimal, although no assurance can be provided that more significant remediation may not be required in the future as a result of spills or releases of petroleum products or hazardous substances or the discovery of unknown environmental conditions.

Item 1A. *Risk Factors*

In addition to the other information set forth in this report, you should carefully consider the factors discussed in Part 1, Item 1A. Risk Factors in our annual report on Form 10-K for the year ended December 31, 2009, which could materially affect our business, financial condition or future results. The risks described in our annual report on Form 10-K are not the only risks facing our company. Additional risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and/or operating results.
