DISCLAIMER

Statements contained in this material, particularly those regarding the possible or assumed future performance, costs, dividends, returns, production levels or rates, prices, reserves, divestments, potential growth of WMC, industry growth or other trend projections and any estimated company earnings are or may be forward looking statements. Such statements relate to future events and expectations and as such involve known and unknown risks and uncertainties. Actual results, actions and developments may differ materially from those expressed or implied by these forward looking statements depending on a variety of factors, including: variations in the market price of the minerals and metals produced by WMC, the impact of foreign currency exchange rates on these market prices, WMC's ability to profitably produce and transport minerals and metals extracted to applicable markets, WMC's ability to achieve projected cost and scheduling targets for repair and construction activities and the activities of governmental authorities in certain countries where WMC has projects, facilities or mines that are being explored or developed, as well as the factors discussed under the caption "Risk Factors" at pages 14 to 16 of WMC's Annual Report on Form 20-F for the fiscal year ended 31 December 2003.

The presentation of WMC's statement of financial performance, statement of financial position, and statement of cashflows and the business segment financial statements is designed to provide information in relation to each of the business segments and is therefore not set out in accordance with Australian Generally Accepted Accounting Principles (GAAP). Financial statements prepared in accordance with Australian GAAP can be found in the December 2004 Preliminary Final ASX Report.

All amounts are in Australian dollars unless otherwise stated.

CEO COMMENTS

By any measure, WMC delivered in 2004, WMC Chief Executive Officer, Andrew Michelmore said at the release of WMC's 2004 financial results.

Profit after tax was up five-fold on 2003 to \$1.3bn. On the back of excellent production performance and continuing strong commodity markets, revenues increased to \$3.8bn.

Earnings from operations increased to \$953m with \$1.4bn of cash generated during 2004.

WMC plans to return \$1bn to shareholders while maintaining the balance sheet strength to fund growth.

Directors have declared a final unfranked dividend of 20 cents, bringing dividends paid from 2004 cash to 37 cents per share.

WMC is building the foundations for the next major growth phase in 2005 - with milestones and commitments approaching on the Olympic Dam Development Study and the Nickel Growth Strategy.

Following a stronger second half and a favourable outlook for commodity prices, WMC is positioned for continued strong production, earnings and shareholder returns in 2005.

Table of Contents

BUSINESS PERFORMANCE

HEALTH, SAFETY & ENVIRONMENT

WMC operated fatality-free through 2004 and free of significant environmental incidents.

While the combined medically-treated and lost-time injury frequency rate increased in 2004, there was a significant 43 percent reduction in the severity of lost-time injuries.

There were 21 new environmental non-compliances for the year - with none of these resulting in either significant or sustained environmental impacts. This represents a strong improvement in performance over previous years. WMC has now achieved four consecutive years of improved environmental performance.

BUSINESS PERFORMANCE

RESULTS SUMMARY

KEY POINTS

Profit after tax for the 12 months ended 31 December 2004 was \$1.3bn, up from \$246m for 2003.

The 2004 earnings includes the following one-off items:

insurance receipts of \$72m;

tax credits arising from the recognition of previous year off-balance sheet tax benefits of \$360m; and

tax credits arising from the restatement of deferred tax balances following entry into the tax consolidation regime of \$169m.

Directors declared a final unfranked dividend of 20 cents per share, with a total unfranked dividend per share for 2004 of 37 cents.

Earnings from operations increased three-fold to \$953m in 2004.

Nickel revenue rose by 25 percent increasing earnings by 83 percent to \$788m on strong production and higher realised prices.

Olympic Dam revenue from operations increased by 61 percent with earnings before interest, tax and hedging up by \$304m on higher production volumes.

Queensland Fertilizer Operations earnings improved \$25m. Queensland Fertilizer Operations revenue was up \$69m on slightly lower production volumes.

Cashflow from operations doubled to \$1.4bn in 2004.

Capital expenditure decreased 35 percent to \$431m following completion of solvent extraction plants and reduced major maintenance.

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Return on equity for 2004 increased to 26 percent with interest cover of 53 times and gearing significantly below long term targets at 8 percent.

Earnings per share increased to \$1.14.

2005 OUTLOOK

Buoyant commodity markets have continued into 2005 with forecast Australian dollar prices remaining steady on 2004 actual prices.

Higher production is expected in nickel, fertilizers and uranium with copper likely to continue strong 2004 production rates.

In a period of firm commodity prices, WMC's focus remains on strong production performance and developing key internal growth projects.

Table of Contents

BUSINESS PERFORMANCE

MARKETING

Commodity markets were buoyant throughout the year with firm prices for all WMC commodities.

Exchange stocks of both nickel and copper remain tight, and demand for our output has been strong. Global fertilizer pricing has improved, boosting realised prices.

Uranium spot prices have increased significantly with expectations of a tighter supply/demand balance. As most uranium oxide is sold under long term contracts, realised prices will trend towards spot prices as new contracts are put in place. Current realisations therefore lag the considerable increases reflected in current spot prices.

DIVIDENDS AND CAPITAL MANAGEMENT

In recognition of the strong profit result, Directors declared a final ordinary unfranked dividend of 20 cents per share for the second half of 2004 to be paid on 11 March 2005. The record date for entitlements is 1 March 2005.

As the company's risk profile has improved, Directors consider the company to be over-capitalised and have recommended a 30 cents per share capital reduction which will be put for shareholder approval at the company's Annual General Meeting on 10 May 2005.

Directors have also approved a share buy-back of up to \$250m, but have indicated that this will not proceed as long as the company is subject to any live takeover bid.

Directors have advised that the Dividend Reinvestment Plan has been suspended for the duration of any bid for the company.

Full implementation of the capital management program mentioned above, together with forecast production and financial performance as outlined in our Target's Statement dated 4 January 2005, would result in a gearing ratio of 17 percent, moving us back towards our target range of 25 to 35 percent.

Funding would be secured through a syndicated banking facility to be raised in the course of the year.

TREASURY

WMC is in a very strong financial position. As an operator of large world-class assets, WMC seeks to finance assets and growth opportunities with a mix of equity and debt financing that best balances risk and reward to shareholders.

The group has total assets of \$8.2bn, equity of \$5.1bn and net debt of \$431m at 31 December 2004. The group's gearing (measured as debt to debt-plus-equity) is just under 8 percent.

During 2004, WMC took advantage of strong operating cashflow to arrange early repayment of residual gold hedge obligations relating to the gold operations previously conducted by the group.

Funding arrangements

Global 2003 Bonds (US\$500m 10 year and US\$200m 30 year tenor) remain in place as core long term debt funding.

Legacy currency hedge book

The legacy currency hedge book for 2005 to 2008 was closed out in 2003. The resulting profit of \$367m was deferred and will be recognised over the years of 2005 to 2008 in line with underlying production. The recognition profile of the deferred profits is set out on page 9. The amounts recognised in 2005 to 2008 will be largely non-assessable for income tax purposes. The proportion of the hedge book relating to the 2004 financial year was realised and reflected in the hedging gain of \$147m.

INSURANCE

During 2004, insurance revenue totalling net \$72m has been recognised with cash receipts totalling \$102m.

TAXATION

Strong and stable profitability for the year, a heightened level of confidence around future performance and the strength of commodity prices increased the certainty of recovery of off-balance sheet tax benefits.

In accordance with accounting convention, all known Australian tax losses and other timing differences not previously brought to account have been recognised on the balance sheet by 31 December 2004. This resulted in a tax benefit of \$360m recognised during the year.

Table of Contents

BUSINESS PERFORMANCE

Entry into the consolidated tax system gave rise to a further tax asset and related tax benefit which we took to account of \$169m.

In addition, the net tax credit benefited from other credits including \$35m relating to residual hedge obligations in respect of former gold operations.

The net impact of these credits, taken against the charge on earnings for the year (\$245m), was to give rise to a tax benefit in the accounts of \$319m.

CORPORATE ONE-OFFS

The full year result includes an accrual for takeover related costs and other one-off corporate items incurred to 31 December 2004 totalling \$24m.

SALE OF TENEMENTS

During the period, WMC divested its interest in the Lanfranchi tenements in Western Australia and its 14 percent interest in Canadian explorer Comaplex Minerals Corp. These transactions contributed \$30m to earnings and \$38m of cash.

COMMODITY AND CURRENCY HEDGING

During 2003 and early 2004, all currency and commodity contracts for the periods 2005 to 2008 and 2005 to 2010 respectively were closed out, crystallising the amounts to be recognised during these periods.

The realised amounts to be recognised in each year are shown in the table below.

Currency (A\$m)			Gold (A\$m)		
1H	2H	Total	1H	2H	Total

Edgar Filing: WMC RESOURCES LTD - Form 6-K

2005	54.5	60.2	114.7	1.2	1.6	2.8
2006	37.3	41.8	79.1	1.1	1.4	2.5
2007	40.5	42.1	82.6	1.2	1.6	2.8
2008	45.9	44.6	90.5	1.1	1.5	2.6
2009				1.3	1.7	3.0
2010				1.4	1.8	3.2
	178.2	188.7	366.9	7.3	9.6	16.9

SENSIVITIES

The 2005 forecast profit after tax is sensitive to variations in the following key commodities and the AUD:USD exchange rate.

Commodity	Movement	Annual PAT impact (A\$M)	Annual cash impact (A\$M)
Nickel	US\$0.10/lb	19	28
Copper	US\$0.05/lb	23	33
Fertilizer	US\$10/t	8	12
Exchange rate			
AUD/USD	US\$0.01	32	45

Sensitivities are based on AUD/USD 74 cent at WMC forecast commodity prices and a 30 percent tax rate.

Care should be taken in interpreting these sensitivities. In particular, the sensitivity analysis treats each movement in the variables in isolation, whereas, in most cases movements will be inter-dependent.

Second Half	6.37	8.69	1.35	1.84	229	312	0.7330
Full Year	6.29	8.54	1.30	1.76	222	301	0.7366
As at 31 December 2004	6.90	8.85	1.49	1.91	234	300	0.7793

US dollar prices and exchange rates sourced from Bloomberg

Improvements in commodity prices were partly offset by a strengthening Australian dollar relative to the US dollar. Positive factors for the AUD included USD weakness resulting from poor economic and market conditions, along with interest rate differentials and a resilient domestic economy.

NICKEL

Market Review

The nickel market continued to strengthen and posted substantial gains in 2004 as a result of higher stainless steel production, strong Chinese demand, historically low inventories, constrained supply and speculative activity. The average nickel price rose by more than 44 percent to US\$6.29 per pound - its highest level since 1988.

Production

The nickel business exceeded full year targets for concentrate, matte and metal production in 2004.

Leinster achieved record annual performance for mill throughput, recovery and nickel-in-concentrate output. The first ore from the new 11 Mile Well open pit was mined in December and mining of remnant ore has extended the life of the Harmony pit into 2005.

As expected, production was lower at Mt Keith with mining transitioning from the higher grade ore at the bottom of Stage E cutback in 2003 to lower grade ore from the new Stage F cutback during 2004.

Production was 8 percent higher at the Kambalda concentrator with increased ore deliveries from mine operators in the region.

Nickel-in-matte production at the Kalgoorlie smelter was marginally lower, reflecting reduced concentrate supply in the second quarter during the transition between cutbacks at Mt Keith. The opportunity was taken during this period to advance the planned replacement of the furnace reaction shaft roof from 2005. An innovative prefabrication approach enabled the work to be completed in 13 days compared to the 28 days originally scheduled for 2005.

Metal production at the Kwinana refinery increased slightly compared to the previous year. The three-yearly major maintenance shutdown was completed in the first half and the low cost expansion of the refinery to 70,000 tonnes per annum capacity was completed and operational during the second half.

Financials

Earnings before interest and tax from the nickel operations were \$788m, up \$358m from 2003 on a pre hedging basis. Key variances included:

Edgar Filing: WMC RESOURCES LTD - Form 6-K

revenue from operations increased by \$407m with lower sales volumes offset by higher realised prices

cash operating costs were \$15m higher, reflecting higher output from the Perseverance mine at Leinster

the cost of purchased feed at Kambalda was \$89m higher due to the higher nickel price and higher volumes

non-cash costs reduced by \$54m, reflecting lower amortisation with completion of primary ore mining at the Harmony open pit at Leinster and stockpile processing at Mt Keith during the transition between cutbacks in the first half of the year.

The unit cash cost of nickel production reduced 9 percent year-on-year. The higher unit cost of sales reflects the higher cost of purchased feed at Kambalda.

Capital expenditure of \$298m included continued development of the Perseverance lower mine at Leinster, increased waste stripping for the Stage F cutback at Mt Keith and capitalised major maintenance relating to the refinery shutdown.

Development

The Lanfranchi mine and associated tenements at Kambalda were sold for \$26m during 2004. This concludes the strategy of selling mature nickel mines at Kambalda and participating in the benefits that a third party can yield from the remaining resource.

Significant progress was made on the development of the Perseverance lower mine at Leinster, with decline access completed to the 11 Level. The new crusher and materials handling system on the 11 Level are scheduled for commissioning during the second quarter of 2005.

The option to purchase the lease containing the Cliffs nickel deposit, located near Mt Keith, was exercised during the year. A feasibility study is underway and development of an exploration decline is scheduled to commence in the first half of 2005.

Outlook

Nickel-in-concentrate, matte and metal production is expected to increase by 2 percent, 10 percent and 8 percent respectively in 2005.

Table of Contents

COPPER - URANIUM

Market review

The copper market continued to strengthen and posted substantial gains during 2004, largely on the back of strong Chinese demand and historically low inventories. The average copper price rose by around 60 percent to US\$1.30 per pound - its highest level since 1995. The market, which was in deficit during 2003, continued to be under-supplied in 2004.

The uranium price has strengthened considerably and forecasts suggest this trend will continue. The spot price indicator for uranium rose by in excess of 40 percent during 2004. WMC's existing contracts include a spot price reference component and new contracts are written with the fixed component at a premium to the prevailing spot price.

Production

Copper production was a record 224,731t, up 40 percent on the previous year driven by record smelter utilisation and refinery performance. This performance was under-pinned by a reliability improvement program which commenced in the smelter and was subsequently implemented in the mine and hydromet areas.

The solvent extraction circuit was successfully commissioned during 2004, and a program to lift copper, uranium and gold recoveries commenced. Uranium recovery increased from historical 65-70 percent levels to a record 77 percent in the fourth quarter.

A program to lift mining and milling rates to 10.5mtpa commenced and will continue into 2005.

Financial

Strong production performance during a period of sustained high copper prices drove a turnaround in earnings before interest from a \$120m loss in 2003 to \$184m in 2004.

Revenue from operations increased by 61 percent from \$696m to \$1,118m due to stronger sales volumes and higher prices.

Cash operating costs rose by \$112m (20 percent) due to a 40 percent increase in production levels, reliability program funding and increased royalty payments.

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Finished goods purchases increased by \$11m to meet contractual uranium commitments.

A review of stocks and fixed assets increased non-cash charges.

Capital expenditure was \$298m lower due to completion of the solvent extract plants, furnace rebuild program in 2003 and a risk-based review of capital requirements in 2004.

Outlook

Copper production levels will be maintained by increased mining and milling rates to a target level of 10.5mtpa by end-2005. Concentrate production will be supplemented by processing of surface stocks, principally furnace reverts. Ore stocks will reduce from the current 1mt to target levels of 0.4mt.

The focus on metal recovery will continue with projects planned to increase uranium oxide production in 2005 by 8 percent to 4,700t.

Development and backfill costs will increase for the next two years in the mine to support the lift in production rates. A three-year cost reduction program focussing on backfill, energy and maintenance costs has been developed and will be implemented by 2008.

FERTILIZER

Market review

Average US\$ di-ammonium phosphate (DAP) prices improved steadily throughout 2004, closing up 14 percent on 2003 levels. Primary drivers behind the price increase included higher oil and gas prices, and increasing production and freight costs. Stronger demand, together with reduced US production, contributed to improved pricing.

An appreciating Australian dollar, however, meant realised A\$ prices were up slightly less at 10 percent for the year. With improved sales and distribution performance, WMC Fertilizers increased the volume of domestic sales, achieving improved margins during the year.

The Hi Fert joint venture, struck in December 2004 between WMC, AWB Limited (Landmark) and Futuris Corporation Limited (Elders), provides further integration into east coast markets where WMC Fertilizers is now the primary supplier of ammonium phosphate fertilizers.

Production

While acid supply constraints limited first half production, higher second half production at the Queensland Fertilizer Operations contributed to annual production of 883,921 tonnes. Product quality, sizing and handling has been improved as a result of newly-commissioned screens at the granulation plant and initial MAP-S (sulphur-fortified mono-ammonium phosphate) results that were also encouraging.

New, value-added fertilizer products that will provide greater fertilizer efficiency for customers and enhance the business, are being investigated. All the products currently under development are derivatives of DAP and MAP.

Financials

Earnings before interest and tax increased by \$25m from a loss in 2003 of \$31m to a loss of \$6m in 2004. Fertilizer sales revenue rose 26 percent but were partly offset by higher unit costs due to lower production and higher non-cash costs. Hi Fert also experienced slightly lower sales margins, mainly due to higher freight costs.

The higher non-cash costs were mainly due to a full year depreciation in 2004 of the 2003 major shutdown costs. Capital expenditure was \$24m lower than 2003, primarily reflecting no capitalised major maintenance in 2004. The next major maintenance program is due in 2006.

Outlook

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Production is expected to be approximately 980,000 tonnes of fertilizer in 2005, reflecting a higher proportion of MAP-based products and greater availability of sulphuric acid from the Mount Isa acid plant. Low cost capital improvement projects and de-bottlenecking will continue over the next few years with an increased focus on development of value-added fertilizer products tailored to improved sales into major domestic markets.

Hi Fert's share of the eastern Australia market is expected to grow through both existing independent distributors and the Elders and Landmark networks.

Table of Contents

BUSINESS STRATEGY & DEVELOPMENT

Corridor Sands

Technical, engineering and metallurgical studies are currently being completed, with the request for tender for a specialist Project Management Contractor to validate the Bankable Feasibility Study being distributed for response late last year.

Progress towards concluding off-take agreements by mid-year, consistent with the project development plan, is proceeding well.

Nickel Growth Strategy

The next phase of WMC's Nickel Growth Strategy was announced during the December quarter, including the planned introduction of alternate processing technology and a regional program of project development and exploration.

With this strategy:

processing capacity at Mt Keith will be more than doubled to enable treatment of all ore from Mt Keith and future Yakabindie operations through a common facility

nickel production is expected to increase by 25,000tpa from 2008/09 through the development of a new processing route to treat current and future stockpiles of talc and low-grade ores from Mt Keith and Yakabindie

a new milling and concentrator circuit will be combined with the application of Low Pressure Leach technology to treat over 110,000t of nickel already in stockpiles.

Pilot plant trials for the new nickel leach circuit are underway in the United States. Product from the leach circuit will be fed directly to expanded capacity at WMC's Kwinana Nickel Refinery or sold as a high value intermediate product.

The capital cost of the leach plant and associated concentrator is forecast to be US\$7- 8 per annual pound of nickel production. Test work and associated engineering studies are scheduled for completion in time for construction to commence in 2006.

Pre-feasibility work also continues at the Yakabindie nickel deposit, 26km south of Mt Keith, with metallurgical testing underway.

Olympic Dam Development Study

Encouraging drill results from the first phase of the Olympic Dam Development Study led to an expanded drilling program at Olympic Dam and further technical options.

Drill results announced during the December quarter have identified additional mineralisation at a shallower depth, with the potential for higher grade and higher copper-to-sulphur ratio. This presents the possibility of extending the utilisation of current surface facilities and allows an earlier commencement of open pit mining in the southern ore body.

Mineral Resources at Olympic Dam were increased during the December quarter by almost 30 percent as a result of recent drilling and an improved long-term uranium price outlook.

The depth and thickness of mineralisation, along with recent mining technical advancements, have allowed the consideration of the larger scale and lower cost underground option of block caving at rates comparable with open pit mining.

The study is focusing on two primary mining options, underground (block caving) and open pit, with both producing approximately 40mtpa of ore. Processing and supporting infrastructure are being matched to this single production level.

WMC is expanding the drill program and intensifying the technical work, while the study team continues detailed discussion with the South Australian Government on key infrastructure, environmental and logistics requirements.

Initial findings on the preferred mining option are due in March 2005 and WMC is due to deliver the complete development study in early 2006.

Exploration

A high level of exploration activity continues in Australia and overseas, both in joint venture and WMC programs. The focus on three key areas of activity – near-mine and regional exploration in Western Australia, and a global program – is yielding positive drill results, with new prospects emerging.

Table of Contents

BUSINESS STRATEGY & DEVELOPMENT

Testing of these prospects and planned drilling of new targets position WMC for continued success in 2005. Highlights of current results and planned activity include:

WA Near-Mine Program

Sir Gawain (13km NNW of the Perseverance Mine) - diamond drilling intersected ultramafic rocks exhibiting bands of massive nickel sulphide ranging from 0.1 to 3 metres downhole thickness. Assay results include 2.9m @ 5.53% nickel (Ni) from 115.8m downhole, and 20cm @ 3.62% Ni from 104.7m downhole.

Goliath Deeps (Yakabindie) - deep diamond drilling intersected 80 metres of significant disseminated nickel sulphides below, and potentially extending, a portion of the Yakabindie resource. Analytical results are pending.

Leinster-Mt Keith belt - recent significant advances in the understanding of the geological setting and characteristics of the Leinster-Mt Keith nickel belt have identified a considerable strike length which has not been fully tested. We will apply our recently developed deep-penetrating electro-magnetic system - which identified the North Cliffs prospect - throughout the Leinster-Mt Keith belt with the expectation of additional high-quality drill targets emerging in 2005.

Forward work program - drilling planned for early 2005 includes continuation of work at Sir Gawain and Goliath Deeps, several additional targets in and around the Perseverance Mine, and follow-up testing at North Cliffs (4m @ 2% Ni intersected during Q3, 2004).

WA Regional Program

WMC continues to develop a diverse portfolio of regional nickel sulphide exploration projects in Western Australia. The projects range from early-stage conceptual targets to more advanced drilling programs and include both 100 percent WMC-owned interests and a number of joint ventures with junior exploration companies.

Collurabbie

The Collurabbie project is located approximately 180km ENE of Mt Keith and includes the Olympia project (70/30 held in joint venture with Falcon Minerals NL).

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Drilling at the Olympia project during Q4, 2004 intersected significant nickel-copper-platinum group elements (Ni-Cu-PGE) mineralisation, see table below.

Collurabbie - Olympia Prospect - significant intersection - 2004

* *Platinum and Palladium only*

In the broader Olympia area, aircore drilling has been completed over a strike extent of 8km. Ni-Cu-PGE mineralisation has been detected along the entire strike-length of this trend. Deep-penetrating ground-based electro-magnetic surveys and regional drill traverses are in progress to test the southern 5km of the trend. In addition, an accelerated diamond drilling program to test the extent of the sulphide mineralisation is underway.

Other regional exploration

Elsewhere in WA, drilling is continuing at the Mt Alexander JV (with Western Areas NL), 125km SSW of Leinster. Two drilling programs are planned for early 2005 at West Musgrave - one to test for deep mineralisation at Babel and one to test a significant electro-magnetic anomaly. Additionally, drilling is planned to test electro-magnetic anomalies detected at the Karlawinda Bore prospect, 350km NNW of Mt Keith.

Table of Contents

BUSINESS STRATEGY & DEVELOPMENT

International

On 19 November 2004, WMC and the Jinchuan Group Ltd announced the formation of a new joint venture exploration company. During the December quarter, WMC entered into a cooperative joint venture to explore for nickel and copper targets in Gansu and regional provinces in China's west. The initial exploration targets are focused on Ni-Cu-PGE deposits. Exploration planned for early 2005 includes regional aero-magnetic surveys and drilling.

The joint venture company will draw employees from WMC and Jinchuan, with an initial capital contribution of RMB 50m (US\$6m) over three years. The joint venture company is owned and funded on a 50-50 basis, with WMC and Jinchuan sharing the cost of any agreed exploration programs.

Albidon JV Africa

WMC completed an exploration agreement with Albidon Ltd covering several large early-stage greenfields exploration areas in Botswana, Malawi, Tanzania and Zambia with a total area of more than 45,000 km². These areas exhibit significant potential for large Ni-Cu-PGE deposits. WMC has commenced an aggressive exploration program aimed at developing several drilling projects during 2005.

Americas

WMC is exploring for Ni-Cu-PGE deposits in selected areas of the United States and Canada. In the United States, airborne electro-magnetic surveys were completed during the quarter and follow-up drilling programs are expected in the early part of 2005.

Technology

Adding value through technical improvements, from exploration to metal refining, is a key component of WMC's success and its growth prospects. Dedicated mining and processing teams focus on business leverage points to develop innovative solutions to maximise returns from new orebodies and the existing asset base. The associated know-how that is generated is protected by patents (32 patents have been granted and a further 72 patents are pending).

During 2004, company technologists managed a large portfolio of projects with the potential to add significant net present value to WMC. From 2002 to 2004, an estimated \$587m in net present value has been added to WMC's business units through successfully delivered technological improvements. Two of WMC's recent in-house developments, namely deep-penetrating electromagnetic exploration technology and technology facilitating the recovery of finely disseminated nickel, have been validated, patented and successfully implemented.

Other

Comaplex - Meliadine

WMC sold its 14 percent stake in Canadian explorer, Comaplex Minerals Corp (TSX:CMF), completing WMC's exit from the Meliadine West exploration project in northern Canada.

Xstrata offer

Xstrata Capital Holdings Pty Ltd (Xstrata) has announced a revised off-market offer of \$7.20 per WMC share. WMC Directors have declined to endorse the offer and will continue to consider all options to secure the best outcome for WMC shareholders. Xstrata's offer is scheduled to close on 28 February 2005. Xstrata has the ability to extend that date.

Table of Contents

DEFINITIONS

Average sales price (including hedging)

Australian dollar sales prices unit received inclusive of hedging. In effect, total product revenue plus or minus commodity and pro rated currency hedging gains or losses divided by product sales volumes.

Capitalised major maintenance

Costs related to planned cyclical maintenance capitalised and amortised over the period to the next major shutdown (where this period is greater than twelve months).

Earnings per share (EPS)

Basic EPS: Profit after tax divided by the weighted average number of ordinary shares on issue during the period.

Diluted EPS: Profit after tax divided by the weighted average number of ordinary and potential shares on issue during the period.

Enhance capital

Capital expenditure where there is a high degree of confidence that a discrete return on expenditure will be achieved through increased production or a reduction in operating costs.

Frequency rate (FR)

Number of lost time and medically treated injuries per million hours exposure.

GAAP

Generally accepted accounting principles in Australia.

Idle capacity

Idle capacity reflects a situation where productive assets are not used at their full or near full capacity. This may result from a shortage of material to process, a shutdown for maintenance or be due to an industrial dispute. Costs are proportionately reallocated from production to non-production costs with the effect that they are charged immediately against earnings as opposed to being included in the valuation of stocks and charged to earnings as product is sold.

Interest cover

Earnings before interest, taxes, depreciation and amortisation and hedging divided by net interest expense incurred before subtracting capitalised interest.

Liquid investments

Investments that are convertible to cash within a period not exceeding ninety days.

LME

London Metal Exchange.

Lost-time injury (LTI)

An injury that results in at least one full shift being lost at some time (not necessarily immediately) after the shift during which the injury occurred, providing it is not a rostered day off.

Mine capital development

Costs of establishing access to ore where the access is expected to be used for production over greater than twelve months.

Table of Contents

DEFINITIONS

Medically-treated injury (MTI)

Injuries that do not result in lost workdays, but require medical treatment (including restricted work).

Operating cashflow to debt

The percentage of annualised net cashflow from operations relative to net debt.

Return on net assets

Business Units earnings before interest, tax and hedging divided by average net assets (excluding tax assets / liabilities and intra-group assets).

Return on equity

Operating profit after tax / total shareholders equity.

Return on invested capital

The annualised earnings before interest and tax as a percentage of funds employed in the business (shareholders equity and net debt).

Sustain capital

Capital expenditure to maintain the operations at their current level of performance with no material impact on production or reduction in the cost base.

Unit cash cost of production

Cash costs directly attributable to production (excludes sales and distribution, royalties, idle capacity and R&D costs amongst others) less the value of by-products produced divided by production volumes.

Unit Total Cost of Sales

Unit Cost of Sales is Total Cost of Sales less co-product revenue divided by product sold. Total Cost of Sales includes all production and non-production costs, and stock movements.

Working capital

Working capital only includes net current trade and other debtors, inventories, and trade and other creditors.

December 2004 Preliminary Final ASX Report

WMC Resources Ltd - ABN 76 004 184 598

Year ended 31 December 2004 (Current period)

(Previous corresponding period: Year ended 31 December 2003)

Results for announcement to the market

		2003		2004
		\$M		\$M
Revenues from ordinary activities	up 31% from	3,060.3	to	4,003.8
Profit from ordinary activities after tax attributable to members	up from	245.6	to	1,326.9
Net profit for the period attributable to members	up from	245.6	to	1,326.9

Dividends

	2003	2004
Interim dividend per share (cents)	Nil	17.0
Final dividend per share (cents)	6.0	20.0

Since year end the directors have declared an unfranked final dividend of 20 cents per share (2003: 6 cents) which will be payable on the 11 March 2005 to registered shareholders as of 1 March 2005 (2003: 15 April 2004). This dividend has not been recognised as a liability at year end.

An unfranked final dividend of 6 cents per share was paid on 15 April 2004 in respect of the 2003 financial year. An unfranked interim dividend of 17 cents per share was paid on 22 September 2004 in respect of the 2004 financial year.

The directors have advised that the dividend reinvestment plan has been suspended for the duration of any bid for the company.

Basis of Preparation

Edgar Filing: WMC RESOURCES LTD - Form 6-K

The financial statements for the year ended 31 December 2004 as presented on pages 1 - 20 reflect the financial performance of the operations of WMC Resources Ltd group for the full financial year.

Explanation of revenue and profits from ordinary activities after tax

Revenue from ordinary activities for the twelve months to 31 December 2004 was \$4,003.8 million, an increase of 31 per cent on the 2003 year of \$3,060.3 million.

Improving operational reliability and buoyant Australian dollar commodity prices contributed to increased operating earnings, returns and cash flows for the year ended 31 December 2004. A detailed discussion of the results can be found in the section of this report entitled 'Commentary on results'.

Audit report

This preliminary final report is based on accounts, which have been audited. The audit report, which was unqualified, will be made available with the company's financial report.

Table of Contents

December 2004 Preliminary Final ASX Report

Commentary on results

Explanation of Revenue

Buoyant commodity prices, strong volumes across all commodities and insurance revenue contributed to revenue growth. Commodity markets were buoyant throughout the year with firm prices for all our commodities. Exchange stocks of both nickel and copper remain tight, and demand for our output has been strong. Fertilizer pricing has improved, boosting our realised prices.

Uranium spot prices have increased significantly with expectations of tighter supply/demand balance. As most uranium oxide is sold under long term contracts realised prices will trend towards spot prices over time as new contracts are put in place. Current realised prices therefore lag the considerable increases reflected in current spot prices.

Revenue for the 2004 year includes the recognition of insurance revenue totalling \$71.8 million reflecting the settlement of the Olympic Dam 2002 solvent extraction fire and the 2003 heat exchanger incident and a further progress instalment on the 2002 Kalgoorlie Nickel Smelter acid plant fire.

Explanation of Profit from ordinary activities after tax

The consolidated profit after tax has increased from \$245.6 million in 2003 to \$1,326.9 million for the year to 31 December 2004. The higher 2004 result compared with 2003 largely reflects increased Australian dollar commodity prices, a turnaround in operational reliability and profitability at Olympic Dam and improved revenues and earnings growth in the Nickel operations.

Profit after tax for 2004 benefited from tax credits arising from the recognition of Australian tax losses and other timing differences not previously brought to account, residual hedge obligations settled in 2004 and restatement of deferred tax balances on entry to the Australian tax consolidation regime. The net tax benefit for 2004 is \$319.1 million.

Copper Uranium

The Copper Uranium operations contributed \$183.8 million (pre hedging) compared with a loss of \$120.2 million (pre hedging) for 2003. The \$304.0 million turnaround reflects stronger commodity prices, increased copper sales volumes and insurance revenues, partly offset by higher volume related costs and certain one-off charges.

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Higher realised prices contributed to improved earnings, mainly driven by an increase in the average copper price from A\$1.24/lb to A\$1.76/lb. Stronger gold and silver prices also contributed to increased revenue and earnings.

Copper sales volumes were approximately 55,000 tonnes higher in 2004 partially offset by a reduction in uranium sales of 400 tonnes. The higher copper volumes reflect a 40% increase in production volumes due to significantly improved operating performance in both the Olympic Dam smelter and refinery and commissioning of the solvent extraction plant.

Settlement of the solvent extraction plant and heat exchanger insurance claims contributed \$82.0 million to 2004 operating revenue and earnings.

Earnings were impacted by higher costs reflecting stronger production volumes and product purchases to meet customer commitments. Non-cash costs increased by \$40.3 million, largely due to the write-off of certain carried forward costs and also due to higher amortisation costs associated with the new solvent extraction plant.

Nickel

Earnings from nickel operations were \$787.8 million (pre hedging) compared with 2003 earnings of \$430.2 million (pre hedging). The increase in earnings primarily reflects stronger realised Australian dollar nickel prices and lower amortisation charges arising from the cessation of mining at the Harmony open pit near Leinster and stock pile processing at Mt Keith during the transition from stage E to stage F cutback in the first half of the year.

Revenue for the nickel operations rose by 15 per cent from \$1,818.1 million in 2003 (excluding hedging) to \$2,096.7 million in 2004 driven by stronger metal volumes and a higher average nickel price up 27 per cent from A\$6.70/lb in 2003 to A\$8.54/lb for 2004.

Metal sales in 2004 have increased by approximately 2 per cent as a result of higher production. Matte sales decreased by 13 per cent primarily due to reduced concentrate feed availability from the Mount Keith mine as a result of transitioning from stage E to stage F mining and matte sales diverted to higher value-added metal production.

During 2004, the sale of Lanfranchi tenements contributed \$26.0 million to revenue.

Amortisation costs have reduced by \$51.1 million, compared with 2003, primarily as a result of reduced mining at the Harmony open pit.

Volumes and prices paid for third party feed purchases from mines operated in the Kambalda region increased reflecting production from five new mines, increased production from existing mines and the impact of the higher Australian dollar nickel price.

Table of Contents

December 2004 Preliminary Final ASX Report

Commentary on results (continued)

Fertilizer

The fertilizer operations (including HiFert Pty Ltd) made a loss of \$5.9 million (pre hedging) in 2004, an improvement from the 2003 loss of \$31.3 million (pre hedging). The Queensland Fertilizer Operations incurred a loss of \$7.0 million, compared with a loss of \$36.0 million in 2003. The improvement is a result of higher Australian dollar sales prices partly offset by the costs of importing fertilizer to meet customer demand.

Other Operations

The loss in 2004 relates to the self-insurance amount on the Olympic Dam heat exchanger insurance claim payable by the WMC group's captive insurer.

Treasury

Hedging gains contributed \$146.8 million to the 2004 group result compared with the 2003 hedging gain of \$72.1 million reflecting the increase in the average exchange rate of the Australian dollar in 2004 compared to 2003 and a higher volume of US dollar hedging positions in 2004.

Net borrowing costs have reduced from \$46.3 million in 2003 to \$22.9 million in 2004 due to lower effective interest rates and reduced net debt levels.

Financing gains have increased from a loss of \$2.5 million in 2003 to a gain of \$37.6 million in 2004. The increase reflects the impact of the strengthening of the Australian dollar on the translation of foreign currency denominated debt and the consequent amortisation of net deferred gains.

Other

Corporate one-offs in 2004 include an accrual for takeover related costs incurred during the year. The increase in the level of exploration and new business expenditure largely relates to the Olympic Dam and Yakabindie development studies and an increase in the level of Australian based exploration programs and activities.

Tax

The tax benefit for 2004 is \$319.1 million. Tax expense on current year profit was more than offset by a tax benefit of \$360.2 million from the recognition of Australian tax losses and other timing differences not previously brought to account, and \$34.8 million relating to residual hedge obligations in respect of the former gold operations. In addition, a tax benefit on restatement of deferred tax balances on entry to the Australian tax consolidation regime of \$169.2 million has been brought to account.

Other factors which will impact future results:

Treasury and Risk Management

The legacy currency hedge book for 2005 to 2008 was closed out in the 2003 year. The resulting profit of \$366.9 million was deferred and will be recognised over the years of 2005 to 2008 in line with the underlying production. The recognition profile of the deferred profits is set out in Note 8. The amounts recognised in 2005 to 2008 will be largely non-assessable for income tax purposes.

WMC has an outstanding insurance claim in relation to the 2002 Kalgoorlie Nickel Smelter acid plant. Progress claims totalling \$12.6 million have been recognised to date, including \$9.0 million in late 2004. The claim will be pursued in 2005 with additional progress payments and cash expected to be received in 2005.

Statement of financial position

The Group is in a strong financial position. As the operator of large world-class assets, WMC seeks to finance its assets and growth opportunities with a mix of equity and debt financing that appropriately balance risk and reward to shareholders.

At 31 December 2004, total assets were \$8,163.1 million.

The tax balances have been restated as at 31 December 2004 to reflect the recognition of Australian tax losses and other timing differences not previously brought to account and the restatement of deferred tax balances on entry to the Australian tax consolidation regime as announced on 9 December 2004.

At 31 December 2004, the WMC group's gearing (measured as net debt to net debt-plus-equity) was 8% (2003: 24%).

The 2003 Global Bond program (US\$500 million 10 year and US\$200 million 30 year) remains in place as the core long-term facility.

WMC has announced certain capital management initiatives, comprising capital returns and share buy-backs in addition to the ordinary dividend program, targeted at providing improved shareholder returns and optimising the Company's gearing ratio.

Table of Contents

December 2004 Preliminary Final ASX Report

Commentary on results (continued)

At 31 December 2004, total equity was \$5,109.1 million, an increase of \$1,159.4 million from 31 December 2003 of \$3,949.7 million. Total equity has been strengthened by 2004 profit after tax of \$1,326.9 million partly offset by the payment of the 2003 final and the 2004 interim dividends, net of dividend reinvestment.

Statement of cash flows

Cash flow from operations for the 12 months to 31 December 2004 was \$1,422.4 million compared with \$675.5 million for 2003. The significant increase in cash flow from operations for 2004 is largely attributable to higher sales volumes across all commodities, higher Australian dollar commodity prices and proceeds from insurance claims.

Capital expenditure for 2004 was \$424.8 million, compared with \$661.9 million in 2003, reflecting reduced expenditure on the construction of the Olympic Dam solvent extraction plants and lower scheduled major maintenance compared with the 2003 year. Investing cash flows include the proceeds from sale of non current assets (notably Lanfranchi tenements and WMC's investment in Comaplex), partially offset by capital outlays in respect of certain growth activities, principally the Olympic Dam development study.

During 2004, WMC took advantage of the strong operating cash flows to arrange early repayment of residual gold hedge obligations relating to the gold operations (GBU) previously conducted by the WMC group. The 2004 cash flow reflects the settlement of the obligations together with current period payments, totalling in aggregate \$116.8 million.

During the year, borrowings were reduced by \$425.7 million, compared with a net increase in borrowings during 2003 of \$53.9 million.

Dividends and capital initiatives

In recognition of the strong profit result Directors declared a final ordinary unfranked dividend of 20 cents per share for the second half of 2004 to be paid on 11 March 2005. The record date for entitlements is 1 March 2005.

As the company's risk profile has improved the directors consider the company to be overcapitalised and have recommended a 30 cents per share capital reduction, which will be put for shareholder approval at the company's annual general meeting on 10 May 2005.

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Directors have approved a share buy back of up to \$250.0 million, but have indicated that this will not proceed as long as the company is subject to any live takeover bid. Directors have advised that the dividend reinvestment plan has been suspended for the duration of any bid for the company.

Full implementation of the above capital management program, together with forecast production and financial performance as outlined in our Target s Statement dated 4 January 2005, would result in a gearing ratio of 17%, moving the company back towards the target range of 25% to 35%. Funding will be secured through a syndicated banking facility to be raised in the course of 2005.

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements**1. Basis of financial report preparation**

This general purpose financial report is for the year ended 31 December 2004, and has been prepared in accordance with the Australian Stock Exchange Listing Rules as they relate to Appendix 4E and in accordance with Accounting Standards, other mandatory professional reporting requirements (Urgent Issues Group consensus views), other authoritative pronouncements of the Australian Accounting Standards Board, and the Corporations Act 2001. It is recommended that this report be read in conjunction with any public announcements made by WMC Resources Ltd and its controlled entities during the reporting year in accordance with the continuous disclosure requirements of the Corporations Act 2001.

The accounting policies adopted are consistent with those of the previous financial year.

This financial report is prepared in accordance with the historical cost convention. Comparative information is re-classified where appropriate to enhance comparability.

The financial statements for the year ended 31 December 2004 as presented on pages 1 to 20 reflect the financial performance of the operations of the WMC Resources Ltd group for the full financial year and comparative figures for the year ended 31 December 2003.

2. Revenue and expenses from ordinary activities

	2004	2003
	\$M	\$M
	<u> </u>	<u> </u>
Revenues from operating activities:		
Sale of goods	3,828.4	3,001.3
Revenue from outside operating activities:		
Proceeds from disposal of non-current assets	45.1	37.2
Interest revenue	20.4	17.6
Insurance revenue	71.8	3.6
Foreign exchange gain	37.6	
Other income	0.5	0.6
	<u> </u>	<u> </u>
Revenue from ordinary activities	4,003.8	3,060.3
	<u> </u>	<u> </u>
Expenses from ordinary activities		
	<u> </u>	<u> </u>

	<u> </u>	<u> </u>

Table of Contents

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements (continued)**3. Significant items**

Profit from ordinary activities after income tax, includes the following revenues and expenses whose disclosure is relevant in explaining the financial performance of the entity due to their size or nature:

		2004	2003
	Notes	\$M	\$M
		_____	_____
Non-recurring corporate costs	3(a)	(16.7)	(5.8)
Gain on sale of tenements	3(b)	29.4	10.3
Insurance revenue	3(c)	50.3	2.6
Idle capacity charge - solvent extraction plant fire	3(d)	(1.5)	(34.0)
Tax benefit not previously brought to account	3(e)	360.2	39.2
Tax benefit on formation of consolidated group	3(f)	169.2	
		_____	_____
Total significant items after tax		590.9	12.3
		_____	_____

(a) Non-recurring corporate costs

Takeover defence and restructure of certain corporate functions and information technology services	(23.9)	(8.4)
Income tax benefit	7.2	2.6
	_____	_____
	(16.7)	(5.8)
	_____	_____

(b) Gain on sale of tenements

Revenue	42.6	23.8
Book value	(13.2)	(13.5)
	_____	_____
Profit	29.4	10.3
Income tax expense		
	_____	_____
	29.4	10.3
	_____	_____

Edgar Filing: WMC RESOURCES LTD - Form 6-K

The 2004 amount includes the sale of the Lanfranchi tenements and the sale of WMC's investment in Comaplex Minerals Corporation. On 7 October 2003, WMC merged the operating subsidiary that held WMC's interest in the Meliadine West gold project with Comaplex Minerals Corporation, a Canadian mining junior.

(c) Insurance revenue

Revenue from insurance claims	71.8	3.6
Income tax expense	(21.5)	(1.0)
	50.3	2.6

The outstanding claims in relation to the Olympic Dam solvent extraction plant fire and heat exchanger incident have now been settled, with all insurance proceeds received in 2004. These claims have been closed and no further monies are outstanding. During the year a further amount was recognised as insurance receivable in relation to the Kalgoorlie Nickel Smelter acid plant.

(d) Idle capacity charge – solvent extraction plant fire

Idle capacity charge in relation to the fire at the Olympic Dam solvent extraction plant	(2.2)	(48.5)
Income tax benefit	0.7	14.5
	(1.5)	(34.0)

On 21 October 2001, a fire destroyed a large portion of the tank farm area of the copper and uranium solvent extraction facilities at Olympic Dam. Other expenses from ordinary activities include idle capacity costs associated with lower production of copper and uranium during the rebuild of the solvent extraction facilities. The solvent extraction facilities are now complete and have ramped up to full capacity during the year ended 31 December 2004.

Table of Contents

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements (continued)**(e) Tax benefit not previously brought to account**

	2004	2003
	\$M	\$M
Recognition of future income tax benefits not previously brought to account	360.2	39.2

Strong taxable income in 2003 and continued strong profitability in 2004 increased the certainty of recovery of off balance sheet tax balances, comprised predominantly of Australian tax losses. As a result, the tax benefit of \$319.1 million for the year ended 31 December 2004 includes a tax accounting credit of \$360.2 million (2003: \$39.2 million) arising from the recognition of Australian revenue tax losses and other timing differences not previously brought to account.

(f) Tax benefit on formation of consolidated group

Tax benefit arising on the formation of a tax consolidation group	169.2
---	-------

On entering the tax consolidation regime the group has chosen to use the transitional provisions to reset the tax values of certain depreciable assets, which will result in additional tax depreciation over the lives of the assets. As a consequence, the deferred tax balances have been restated and the benefit, estimated at \$169.2 million, has been recorded for the year ended 31 December 2004.

4. Income tax**Prima facie tax reconciliation**

	2004	2003
	\$M	\$M
Profit from ordinary activities before income tax	1,007.8	247.9
Add: equity accounted pre-tax losses	0.4	—
	1,008.2	247.9

Edgar Filing: WMC RESOURCES LTD - Form 6-K

Prima facie tax expense at the rate of 30%	(302.4)	(74.4)
Adjustment for impact of hedging contracts fair valued at demerger:		
- legacy currency and commodity hedging	30.9	24.9
- residual hedging obligations relating to former gold operations	34.8	10.7
Fair value adjustment arising from acquisition of entities		(3.1)
Non deductible depreciation or amortisation	(8.0)	(7.6)
Future income tax benefits not brought to account - overseas	(3.6)	(4.3)
Future income tax benefits recognised - Australia	360.2	39.2
Tax benefit on formation of a tax consolidated group	169.2	
Other	0.9	3.8
Over provision of tax in prior year		
- adjustments arising on finalisation of tax returns	8.9	8.5

- ¹ Sales revenue includes intermediate product sales. Segment revenues, expenses and results include transfers between segments. Such transfers are priced on an arm's-length basis and are eliminated on consolidation.
- ² Revenue and costs relating to power sales made by Nickel to third parties in Western Australia are now reported as part of Nickel's revenues and costs, with minimal net contribution to Nickel's profit.
- ³ \$20.0 million relates to the self-insurance amount paid by WMC's captive insurance entity.
- ⁴ Unallocated losses is largely matched by revenues in business segments with minimal net contribution to group earnings. The net amount for 2004 includes the \$20.0 million self-insurance payment.

Table of Contents

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements (continued)**7. Dividends**

	2004	2003
	\$M	\$M
(a) Dividends paid during the year ended 31 December 2004:		
<i>Final dividend 2003</i>		
- Paid in cash	44.6	
- Satisfied through the issue of shares	24.5	
	<u>69.1</u>	
<i>Interim dividend 2004</i>		
- Paid in cash	161.8	
- Satisfied through the issue of shares	35.2	
	<u>197.0</u>	
	<u>266.1</u>	

On 11 February 2004, the directors declared an unfranked final dividend of 6 cents per share, in respect of the 2003 financial year.

An unfranked interim dividend of 17 cents per share, in respect of the 2004 financial year, was paid on 22 September 2004.

Since year end the directors have declared an unfranked final dividend of 20 cents per share (2003: 6 cents) which will be payable on the 11 March 2005 to registered shareholders as of 1 March 2005 (2003: 15 April 2004). This dividend has not been recognised as a liability at year end.

(b) Dividend reinvestment plans

WMC Resources Ltd offers shareholders resident in Australia and New Zealand the opportunity to reinvest part or all of their dividends in additional WMC shares through our dividend reinvestment plan (DRP). The terms and conditions for the DRP may be found on WMC's website at www.wmc.com/investor/sharediv.htm.

Edgar Filing: WMC RESOURCES LTD - Form 6-K

During the year 12,080,004 shares with a value of \$59.7 million were issued under the dividend reinvestment plan.

The directors have advised that the dividend reinvestment plan has been suspended for the duration of any bid for the company.

8. Deferred gains/(losses) - hedging contracts

Deferred gains and losses in relation to hedging contracts are reported within other current liabilities and non-current liabilities in the statement of financial position. The net deferred gains and losses at the end of the year are:

	2004	2003
	\$M	\$M
Current - deferred gains (net)	135.3	175.1
Non-current - deferred gains (net)	559.0	684.6
Net deferred gains/(losses)	694.3	859.7

Deferred gains and losses primarily consist of realised and unrealised gains and losses on foreign currency denominated debt and associated translation hedges, and realised gains and losses arising from the early close-out of commodity and currency hedging contracts that relate to commodities to be produced and sold in future years. The deferred gains and losses on the commodity and currency hedging contracts will be brought to account in the year that the related production is sold.

Translation hedges are used to minimise the volatility arising from the revaluation of foreign currency assets and liabilities (principally US\$ denominated debt). A translation hedge consists of offsetting forward exchange contracts. WMC has a series of forward exchange contracts whereby the company has purchased US\$ and sold A\$ and offsets these contracts by selling US\$ and purchasing A\$. Gains and losses on the revaluation of the US\$ debt are offset by gains and losses on the purchased US\$ forward exchange contract. Gains and losses on the sold US\$ contract are deferred and amortised over the life of the underlying debt.

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements (continued)**9. Retained profits**

	2004	2003
	\$M	\$M
Retained profits/(accumulated losses) at the beginning of the financial year	199.5	(77.5)
Net profit attributable to members of WMC Resources Ltd	1,326.9	245.6
Dividends paid	(266.1)	
Net transfers - from asset revaluation reserve		24.5
- (to)/from foreign currency translation reserve	(2.5)	6.9
Retained profits at the end of the financial year	1,257.8	199.5

10. Notes to the statements of cash flows

	2004	2003
	\$M	\$M
Operating profit after income tax	1,326.9	245.6
Depreciation and amortisation	464.8	508.3
Research and development written off	0.4	0.5
Profit on disposal of non-current assets	(6.5)	(12.6)
Provision for diminution in investments and loans	0.6	2.0
Interest capitalised	(2.5)	(9.1)
Write-down in value of inventory	30.0	16.5
Sub total	1,813.7	751.2
<i>Change in assets and liabilities adjusted for effects of purchase and disposal of controlled entities during the financial year:</i>		
(Increase)/decrease in:		
- inventories	(61.2)	(73.3)
- receivables	45.4	48.8
- deferred tax assets	(487.6)	(1.4)
- other assets	(4.2)	(92.5)
(Decrease)/increase in:		
- payables	(66.2)	29.4
- current tax liabilities	0.5	(2.7)
- deferred tax liabilities	167.7	5.0
- provisions	(9.6)	13.8
- other liabilities	23.9	(2.8)
Net cash inflow from operating activities	1,422.4	675.5

11. Control gained over entities having material effect

There have been no acquisitions of material entities in the year to 31 December 2004.

12. Loss of control of entities having material effect

There has been no disposal of material entities in the year to 31 December 2004. On 9 December 2004 WMC announced that it had formed a strategic partnership with AWB Limited and Elders Limited relating to the distribution and marketing of fertilisers. The outcome of this arrangement was that, effective from 1 December 2004, WMC's interest in Hi-Fert Pty Ltd was diluted from 100% to 33.3%. The impact of this transaction was not material to the results of the group.

Table of Contents

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements (continued)

13. International financial reporting standards (IFRS)

WMC will be required to prepare financial statements which comply with Australian equivalents to International Financial Reporting Standards (AIFRS), as issued by the Australian Accounting Standards Board, from 1 January 2005. The financial report for the half year ending 30 June 2005 will be the first financial report prepared in compliance with AIFRS. Comparative information will be required to be restated to reflect the application of AIFRS to that comparative period.

As WMC is an SEC foreign registrant, it is required to present statements of financial performance and cash flows and related notes for a three year period for its United States financial report on Form 20-F. This would normally require the WMC AIFRS transition date to be on 1 January 2003, one year earlier than required for Australian only listed entities. The SEC is currently considering whether the additional comparative year requirement will be waived for foreign registrants. As a result, WMC's transition date may be either 1 January 2003 or 1 January 2004. Irrespective of the actual transition date, WMC will provide a complete reconciliation from existing Australian generally accepted accounting principles to AIFRS accounting principles.

During 2003, WMC established a project team to manage and plan the transition to AIFRS, to ensure all stakeholders are informed and to identify solutions to issues, which arise during the project. A detailed technical evaluation, calculation of transition adjustments and management of any process or system changes required, are underway.

The following summarises the key areas in which AIFRS will have an impact for WMC.

(a) Provision for environmental rehabilitation

Environmental obligations associated with the retirement or disposal of long-lived assets will be recognised when the disturbance occurs and are based on the extent of damage incurred. The provision is measured as the present value of the future expenditure. A corresponding rehabilitation asset is also recognised.

On an ongoing basis, the rehabilitation liability will be remeasured at each reporting period in line with the changes in the time value of money (recognised as an expense in the statement of financial performance and an increase in the provision), and additional disturbances/change in rehabilitation costs will be recognised as additions/changes to corresponding asset and rehabilitation liability. The rehabilitation asset will be amortised to the statement of financial performance on the same basis as the development asset.

Currently, WMC has a rehabilitation liability, which progressively increases (with the corresponding amount booked to the statement of financial performance) over the life of the operation.

Impact on WMC:

Transition impact - WMC will be required to remeasure the existing environmental rehabilitation provision to the present value of the future expenditure and recognise a related rehabilitation asset. Retained earnings will be impacted to the extent that this net position differs from the existing rehabilitation provision.

Continuing impact - The statement of financial performance will recognise both an accretion expense and amortisation of the rehabilitation asset.

(b) Derivatives

Some financial assets and liabilities, including all derivatives, will be recorded on the face of the statement of financial position at fair value. Assuming certain conditions are met, hedges are classified as either cash flow hedges, fair value hedges or hedges of investments in foreign operations. Changes in the fair value of cash flow hedges can be deferred in an equity account in the statement of financial position, provided the hedges are effective. Changes in the market value of fair value hedges together with changes in the fair value of underlying positions are booked to the statement of financial performance.

WMC currently values hedges at spot prices and defers gains and losses on effective hedges as assets and liabilities on the statement of financial position until the underlying hedged transaction occurs.

Impact on WMC:

Transition impact WMC is yet to determine the date of transition, however it is likely that the existing derivative based balances will be revalued to market rates and any deferred gains or losses transferred to equity.

Continuing impact As WMC closed out its 2005 to 2008 currency and 2005 to 2010 commodity hedge books in 2003 and 2004 (and it is assumed to continue its policy of not hedging) and the effect of the 2004 legacy hedge book will be finalised in 2004, there should not be a significant impact on earnings.

Table of Contents

December 2004 Preliminary Final ASX Report

Notes to and forming part of the consolidated financial statements (continued)

(c) Defined Benefit Superannuation Plan

An asset/liability, being the net of the defined benefit obligation (adjusted for unrecognised actuarial gains/losses and past service costs) and the fair value of the plan assets, will be recognised in the statement of financial position. On an ongoing basis, the movement in this net balance will be recognised in the statement of financial performance.

Currently, WMC recognises the cash contributions to the defined benefit super fund as an expense in the statement of financial performance.

Impact on WMC:

Transition impact - WMC will recognise a defined benefit liability in the statement of financial position with the corresponding impact to retained earnings.

Continuing impact - Movements in the net position of the defined benefit fund at subsequent reporting periods will be recognised in the statement of financial performance.

(d) Income Tax

Income tax will be calculated based on the balance sheet approach, replacing the current income statement method. This may result in the recognition of additional deferred tax assets and liabilities. In addition, tax losses will be recognised as an asset to the extent that future taxable profits are probable. This may result in greater deferred tax assets when compared to the existing criteria for recognising future income tax benefits when tax losses are virtually certain of being realised and timing differences where realisation is assured beyond reasonable doubt.

Impact on WMC:

Transition impact - The change to the balance sheet approach may result in the recognition of additional deferred tax assets and liabilities with a corresponding impact to retained earnings.

Continuing impact - Movements in deferred tax assets and liabilities will be recognised in the statement of financial performance.

(e) Impairment of Assets

The recoverable amount of non-current assets will be assessed as the higher of net selling price and value in use, on a discounted basis. WMC currently assesses recoverable amounts of non-current assets based on undiscounted future net cash flows.

Impact on WMC:

Transition impact Current assessment does not indicate any impact on the IFRS opening statement of financial position.

Continuing impact Future economic cycles and other risks and uncertainties could result in a greater volatility of earnings as a consequence of write-downs (and subsequent reversals) of non-current assets.
