Supplemental Information (Unaudited) 1/31/09

(1) Fair Value Disclosure

The fund adopted FASB Statement No. 157, Fair Value Measurements (the Statement). This Statement provides a single definition of fair value, a hierarchy for measuring fair value and expanded disclosures about fair value measurements.

Various inputs are used in determining the value of the fund s assets or liabilities carried at market value. These inputs are categorized into three broad levels. Level 1 includes quoted prices in active markets for identical assets or liabilities. Level 2 includes other significant observable market-based inputs (including quoted prices for similar securities, interest rates, prepayment speed, and credit risk). Level 3 includes unobservable inputs, which may include the adviser s own assumptions in determining the fair value of investments. Other financial instruments are derivative instruments not reflected in total investments, such as futures, forwards, swap contracts, and written options. The following is a summary of the levels used as of January 31, 2009 in valuing the fund s assets or liabilities carried at market value:

	Level 1	Level 2	Level 3	Total
Investments in Securities	\$ 3,369,184	\$ 30,117,586	\$ 55,401	\$ 33,542,170
Other Financial Instruments	\$	\$ (442,774)	\$	\$ (442,774)

Following is a reconciliation of Level 3 assets for which significant unobservable inputs were used to determine fair value. The table presents the activity of Level 3 securities held at the beginning and the end of the period.

The credit ratings presented here are an indicator of the current payment/performance risk of the related swap, the reference obligation for which may be either a single security or, in case of a credit default index, a basket of securities issued by corporate or sovereign issuers. Each reference security, including each individual security within a reference basket of securities, is assigned a rating from Moody s Investor Service. If not rated by Moody s, the rating will be that assigned by Standard & Poor s. Likewise, if not assigned by Standard & Poor s, it will be based on the rating assigned by Fitch, Inc. The ratings for a credit default index are calculated by MFS as a weighted average of the external credit ratings of the individual securities that compose the index s reference basket of securities.

In a credit default swap, credit events, although contract specific, generally consist of a combination of the following: bankruptcy, failure to pay, restructuring, obligation acceleration, obligation default, or repudiation/moratorium, each as defined in the 2003 ISDA Credit Derivatives Definitions as amended by the relevant contract. Obligation acceleration, obligation default, or repudiation/moratorium are generally applicable when the reference obligation is issued by a sovereign entity or an entity in an emerging country. In the event that a defined credit event occurs, the protection buyer, under the terms of the swap contract, designates which security will be delivered to satisfy the reference obligation. Upon designation of the reference security (or upon delivery of the reference security in the case of physical settlement), the difference between the value of the reference obligation and the swap s notional amount is recorded as realized gain or loss on swap transactions in the Statement of Operations. Absent any recoveries under recourse or collateral provisions, the maximum amount of future, undiscounted payments that the fund, as protection seller, could be required to make is equal to the swap s notional amount. The protection seller s payment obligation would be offset to the extent of the value of the contract s reference obligation.

At January 31, 2009, the fund had sufficient cash and/or other liquid securities to cover any commitments under these derivative contracts.

(4) Transactions in Underlying Funds-Affiliated Issuers
