

LOGIC DEVICES Inc
Form 10-K
December 27, 2010
UNITED STATES

SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-K

Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the Fiscal Year Ended September 30, 2010

or

Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the Transition Period _____ to _____

Commission File Number

0-17187

LOGIC DEVICES INCORPORATED

(Exact name of registrant as specified in its charter)

California
(State of Incorporation)

94-2893789
(I.R.S. Employer Identification No.)

1375 Geneva Drive, Sunnyvale, CA 94089

(Address of principal executive offices, including Zip Code)

(408) 542-5400

Edgar Filing: LOGIC DEVICES Inc - Form 10-K

(Registrant's telephone number, including Area Code)

Securities registered pursuant to Section 12(b) of the Act : **NONE**

Securities registered pursuant to Section 12(g) of the Act: **Common Stock, no par value**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.
Yes No

Indicate by check mark if the registrant is not required to file report pursuant to Section 13 or Section 15(d) of the Act.
Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of large accelerated filer, accelerated filer, and smaller reporting company in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Accelerated filer

Non-accelerated filer (Do not check if a smaller reporting company)

Smaller reporting company

Indicate by check whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of the voting and non-voting common stock held by non-affiliates computed by reference to the closing price of the common stock as of March 31, 2010, the last day of the registrant's most recently completed second quarter was \$6,499,900.

As of December 23, 2010, the Registrant had 7,398,172 shares of its common stock issued and outstanding.

CAUTIONARY STATEMENT

This Annual Report on Form 10-K contains forward-looking statements which include, but are not limited to, statements concerning projected revenues, expenses, gross margin, net income, market acceptance of our products, the competitive nature of and anticipated growth in our markets, our ability to achieve further product integration, the status of evolving technologies and their growth potential, the timing and acceptance of new product introductions, the adoption of future industry standards, our production capacity, our ability to migrate to smaller process geometries, and the need for additional capital. These forward-looking statements are based on our current expectations, estimates, and projections about our industry, management's beliefs, and certain assumptions made by it. Words such as anticipates, appears, expects, intends, plans, believes, seeks, estimates, may, will, and variations of these words or similar expressions are intended to identify forward-looking statements. In addition, any statements that refer to expectations, projections, or other characterizations of future events or circumstances, including any underlying assumptions, are forward-looking statements. These statements are not guarantees of future performance and are subject to risks, uncertainties, and assumptions that are difficult to predict. Therefore, actual results could differ materially and adversely from those results expressed in any forward-looking statements, as a result of various factors, some of which are listed under the section, Item 1A - Risk Factors, of this Annual Report on Form 10-K. We undertake no obligation to revise or update publicly any forward-looking statements for any reason.

PART I

Item 1. BUSINESS

General Development of the Business

LOGIC Devices Incorporated, an ISO 9001:2008 registered company, develops and markets high-performance, low power digital integrated circuits and integrated modules that perform high-density storage and signal/image processing functions. Our products enable video display, transport, editing, composition, special effects, and the high-performance, high-density storage of electronic information. We also provide solutions for digital filtering in television broadcast stations and image enhancement in medical diagnostic scanning and imaging equipment.

Our products are used in video broadcasting, medical imaging, military, industrial, embedded, and telecommunications markets. Our products address memory, digital signal processing (DSP), and high-performance arithmetic computation. We focus on developing proprietary, silicon intellectual property (IP) and standard catalog products to address specific functional application needs and performance levels that are not otherwise commercially available. We seek to provide related groups of circuits that original equipment manufacturers (OEMs) incorporate

into high-performance electronic systems.

We rely on third-party silicon foundries to process silicon wafers, each wafer having up to several hundred integrated circuits of a given LOGIC design, from which finished products are then assembled. Our strategy is to avoid the substantial investment in capital equipment and expertise required to establish a wafer fabrication facility, by outsourcing wafer processing to third-party foundry specialists to take advantage of their expertise. See "Business Background." We currently have one primary wafer supplier. We continue to explore additional foundry relationships to reduce our dependence on any single wafer foundry.

We market our products worldwide via our direct marketing and business through an external sales management organization, providing increased direct sales support and channel exposure through a combination of domestic sales representatives and international non-stocking distributors and/or agents. In fiscal 2010, approximately 26 percent of net revenues were from international channels. We adjust our sales structure to address appropriate market requirements. We include the following as some of our customers: Texas Instruments, BAE Systems, Harmonic, GE Medical, Northrup Grumman, Qualcomm, and Raytheon.

LOGIC Devices was incorporated under the laws of the State of California in April 1983. Our headquarters are located at 1375 Geneva Drive, Sunnyvale, California 94089, and our telephone number is 408-542-5400.

Available Information

Our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports filed or furnished pursuant to Section 13(a) or Section 15(d) of the Securities Exchange Act of 1934 are available free of charge on our website, www.logicdevices.com, as soon as reasonably practicable after we electronically file such material with or furnish such material to the Securities and Exchange Commission.

Background

Continuing advances in fabricating semiconductors are driving a global revolution in electronics. With these ongoing advances, the ability to economically compute, communicate, and control seems to be limited only by the creativity required to implement ever more complex electronic systems. It is increasingly common to implement entire electronic systems on a single, small sliver of silicon. The challenges to the industry have increasingly turned toward innovative product definition, timely product development, technical customer support, and heavy capital investments in advanced semiconductor wafer fabrication facilities. The rapid advances in chip fabrication technology have resulted in a specialization of skills within the industry. In addition to the specialization of materials processing skills required to fabricate semiconductor wafers, the industry increasingly requires and values system architecture development, interoperability standards, signal processing algorithms, and circuit design expertise as essential skills for developing financially successful products. Many opportunities have thus emerged for semiconductor companies that focus on product definition, advanced design techniques, and technical application support, and that rely on third parties for wafer fabrication. We focus our resources on defining and developing high-performance integrated circuit components and integrated multi-chip modular products to growing markets, which require demanding computational throughput.

The semiconductor industry is intensely competitive, highly cyclical, and characterized by rapid technological change, product obsolescence, wide fluctuations in both demand and capacity, and steep price erosion. These factors can obsolete processes and products currently utilized or produced by us. In such cases, we are required to develop products utilizing new processes and to either integrate such products into our existing foundry processes, or seek new foundry sources.

Markets and Product Development Strategies

We have historically derived a significant portion of our revenues from sales to video equipment manufacturers and to defense contractors providing systems that perform computationally intensive image processing. Our products were among the first to provide economical, high-speed, yet low power, computational solutions for common image manipulation and storage problems encountered in implementing these systems. Applications of our products also overlap into medical diagnostic imaging equipment, and digital cinema systems. We jointly define with our

customers, a family of digital image filtering circuits that address the filtering requirements of HDTV studio production systems.

As a result of our work on high-speed, low power image processing circuits that are very computationally demanding, we have developed expertise in circuit design and implementation that is not readily available to many OEMs, and within the semiconductor industry, only available within some of the very largest companies that, due to their size, are compelled to pursue very large markets. Our capabilities and size provide opportunities to service technically-demanding industrial and military markets that are not serviced by those larger companies.

In addition to, as well as a result of our work on high-performance, low power silicon developments for the markets, applications, and platforms we serve, we have introduced a product family enabling us to provide advanced, multi-chip, integrated modular products. This product packaging medium facilitates the integration of LOGIC silicon IP as well as silicon IP from other semiconductor manufacturers providing high-density, wide-word memory arrays, sub-systems, and systems in packages.

The same advances in semiconductor technology that have enabled the advancements in high definition broadcast video production and distribution have driven a rapid increase in the ability to transmit vast amounts of data. Communications in all forms with increasing portability and bandwidth are proliferating worldwide. Much of this new communication capability will be utilized to transport video streams. We believe that many opportunities exist to utilize our capabilities in low power, high speed computation and storage to address the requirements of these communications and video systems. The convergence of communications and ubiquitous image processing is an opportunity that is well-suited to our capabilities and far exceeds our abilities to address completely.

We seek to identify additional markets that require the application of our silicon design and multi-chip packaging expertise; that are stable, long-lived markets that are not extremely cost-sensitive; that offer potential for substantial revenue growth; and that are not served by larger competitors with substantially more resources. Currently, the semiconductor industry is challenged by several factors. First, the cost of developing high complexity products is escalating as fast, if not faster than, the capability of the technology itself is increasing. Second, the disciplines required to develop complex, systems-on-chips (SOCs) requires a rapidly increasing breadth of technical skills. Consumer-related products are experiencing ever shrinking life cycles as new products are quickly supplanted by even newer products.

Wafer Fabrication Technology

LOGIC Devices is a fabless manufacturer. We rely upon third-party foundry suppliers to produce processed wafers from mask patterns designed by us. Through these wafer suppliers, we have access to advanced high-speed, high-density complimentary metal oxide semiconductor (CMOS) process technology, without the significant investment in capital equipment and facilities required to establish a wafer fabrication factory. Coupled with our structured custom design methodology and experience with high-speed circuit design, this CMOS technology has allowed us to produce products that offer high computational speeds, high reliability, high levels of circuit integration (complexity), and low power consumption.

We are primarily dependent upon one wafer supplier and do not have a guarantee of minimum supplies. Therefore, there can be no assurance that such relationships will continue to be on terms satisfactory to us. The inability to obtain adequate quantities of processed wafers could limit our revenues. As a result of this risk, we carry a large inventory of unassembled wafers that can be packaged into a variety of carrier styles to support customer requirements.

Production, Assembly, and Test

Our production operations consist of functional and parametric testing, hot and cold testing, final inspection, quality inspection, and shipment. As is customary in the industry, high-volume assembly subcontractors assemble our devices. Thereafter, the assembled devices are returned to us for final testing and shipment to customers. We continue to test materials and products at various stages in the manufacturing process, utilizing automated test equipment.

We have historically maintained, and expect to continue to maintain, high levels of inventory of our products. For some product types, we must purchase our anticipated inventory needs for the life of the product (often ten or more years) in a short period of time. Our high inventory levels heighten the risk of inventory obsolescence and write-offs.

Marketing, Sales, and Customers

We market our products worldwide via our marketing and business development group as well as an external sales management organization, channeling our products into both domestic and international territories via manufacturers representatives and non-stocking distributor and/or agents. We concentrate our direct marketing efforts on high-performance segments of the broadcast, medical imaging, industrial, embedded telecommunications and consumer markets, in applications where high speed is critical. Among our OEM customers are Texas Instruments, BAE Systems, Harmonic, GE Medical, Northrup Grumman, Qualcomm, and Raytheon.

Distributors purchase our products for resale, generally to a broad base of small- to medium-sized customers. As is customary in the industry, our distributors receive certain price protection and limited stock rotation rights. However, our distributors are discouraged from maintaining uncommitted stock and must place an order of equal or greater value if they do request a return. During fiscal 2010 and 2009, sales through distributors accounted for approximately 29% and 16% of net revenues, respectively.

In fiscal 2010 and 2009, no distributors generated more than 10% of net revenues; however, Benchmark Electronics (manufacturers for Texas Instruments) comprised 16% and 32% of net revenues in fiscal 2010 and 2009, respectively. In addition, Oncore Electronics (manufacturer for Texas Instruments) comprised 15% and 41% of net revenues in fiscal 2010 and 2009, respectively, and BAE Systems comprised 22% of net revenues in fiscal 2010.

Our distributors are not exclusive and they may also market products competitive with our products. We warrant our products against defects in materials and workmanship for a period of 12 months from the date of shipment. Warranty expenses to date have been nominal.

International sales are conducted by sales representatives and distributors located throughout Europe and Asia. During fiscal 2010 and 2009, our export sales were approximately 26% and 13% of net revenues, respectively (see Note 7 in "Notes to Financial Statements" contained in Item 8). Our international sales are billed in United States dollars, and therefore, settlements are not directly subject to currency exchange fluctuations. However, changes in the relative value of the dollar may create pricing pressures for our products. Although our international sales are subject to certain export restrictions, including the Export Administration Amendments Act of 1985 and the regulations promulgated thereunder, we have not experienced any material difficulties resulting from these restrictions to date.

Backlog

As of December 2, 2010 and 2009, our backlog was approximately \$185,900 and \$644,400, respectively. This backlog includes all released purchase orders shippable within the following 12 months, including orders from distributors. Our backlog, although useful for scheduling production, does not represent actual sales and should not be used as a measure of future sales or revenues at any particular time. In accordance with accepted industry practice, all orders on the backlog that are not "last-time buys" of obsolete products are subject to cancellation without penalty at the option of the purchaser at any time prior to shipment. In addition, the backlog does not reflect changes in delivery schedules and price adjustments that may be passed on to distributors or credits for returned products. We produce catalog products that may be shipped from inventory within a short time after receipt of a purchase order. The business for our catalog products, like the businesses of other companies in the semiconductor industry, is characterized by short-term orders and shipment schedules rather than by purchase contracts. Our shipments are generally concentrated toward the end of each quarter, making it difficult to predict our revenues and results of operations for any fiscal period. For these reasons, our backlog as of any particular date is not representative of actual sales for any succeeding period and we believe that our backlog is not a good indicator of future revenues.

Research and Development

As we have not introduced sufficient new products over the past few years, we view new product development as the most important factor affecting revenue growth; therefore, we continue our commitment to research and development. In addition, we bolster our position with the addition of our multi-chip packaged products, facilitating the integration of our silicon IP with the silicon IP of others to provide packaged solutions to our current and prospective customers. Research and development expenditures were 45% and 38% of net revenues in fiscal 2010 and 2009, respectively. These percentages are affected by the declining revenues. See "Selected Financial Data," "Management's Discussion and Analysis of Financial Condition and Results of Operations," and "Statements of Operations," contained in Items 6, 7, and 8, respectively.

Competition

The semiconductor industry is intensely competitive and characterized by rapid technological change and rates of product obsolescence, price erosion, periodic shortage of materials, variations in manufacturing yields and efficiencies, and increasing foreign competition. The industry includes many major domestic and international companies that have substantially greater financial, technical, manufacturing, and marketing resources than LOGIC. We face competition from other manufacturers of high-performance integrated circuits, many of which have advanced technological capabilities and internal wafer production capabilities. Our ability to compete in this rapidly evolving environment depends on elements both in and outside our control. These elements include our ability to develop new products in a timely manner, the cost effectiveness of our manufacturing, the acceptance of new products by customers, the speed at which customers incorporate our products into their systems, the continued access to advanced semiconductor foundries, the number and capabilities of our competitors, and general economic conditions.

Patents and Copyrights

Because of the rapidly changing technology in the semiconductor industry, we rely primarily upon our design know-how, rather than patents and copyrights, to develop and maintain our competitive position. We attempt to protect our trade secrets and other proprietary information through confidentiality agreements with employees, consultants, suppliers, and customers, but there can be no assurance that those measures will be adequate to protect our interests.

We are of the opinion that patent and maskwork protection is of less significance in our business than other factors, such as the experience and innovative skill of our personnel and the abilities of our management. There can be no assurance that others will not develop or patent technology similar to our technology, or copy or otherwise duplicate our products. We own five patents awarded by the United States Patent and Trademark Office.

Since others have obtained patents covering various semiconductor designs and processes, certain of our present or future designs or processes may be claimed to infringe upon the patents of third parties. We have previously received, and may in the future receive, claims that one or more aspects or uses of our products infringe on patent or other intellectual property rights of third parties. See Item 3 Legal Proceedings. We do not believe that we infringe upon any known patents at this time. If any such infringements exist or arise in the future, we may be liable for damages and may, like many companies in the semiconductor industry, find it necessary or desirable to obtain licenses relating to one or more of our current or future products. Based on industry practice, we expect that any necessary licenses or rights under patents could be obtained on conditions that would not have a material adverse effect. There can be no assurance, however, that licenses could, in fact, be obtained on commercially reasonable terms, or at all, or that litigation would not occur. Our inability to obtain such licenses on economically reasonable terms or the occurrence of litigation could adversely affect us.

Employees

As of September 30, 2010, we had 13 full-time employees. We have been careful to retain employees that are important to maintain our ongoing development efforts. Our ability to attract and retain qualified personnel is an important factor in our continued success. None of our employees are represented by a collective bargaining agreement, and we have never experienced any work stoppage. We believe that our employee relations are good.

Regulations

Federal, state, and local regulations impose various environmental controls on the discharge of chemicals and gases in connection with the wafer manufacturing process. Since we rely on third party manufacturers and our activities do not involve utilization of hazardous substances generally associated with semiconductor processing, we believe such regulations are unlikely to have a material affect on our business or operations.

Item 1A. RISK FACTORS

Set forth below are some of the risks and uncertainties that, if they were to occur, could materially adversely affect our business or that could cause our actual results to differ materially from the results contemplated by the

forward-looking statements contained in this report and other public statements we make.

Our independent auditors have issued a report questioning our ability to continue as a going concern. This report may impair our ability to raise additional financing and adversely affect the price of our common stock.

We have incurred significant losses and negative operating cash flow in the past and we will likely incur significant losses and negative operating cash flow in the foreseeable future. Continued losses and negative operating cash flow could hamper our operations and prevent us from expanding our business.

Reports of independent auditors questioning a company's ability to continue as a going concern are generally viewed unfavorably by analysts and investors. This report may make it difficult for us to raise additional debt or equity financing necessary to continue our business. Continued losses and negative operating cash flow are also likely to make our capital raising needs more acute while limiting our ability to raise additional financing on favorable terms.

We are a small company with very limited resources compared to our current and potential competitors and we may not be able to compete effectively in our highly competitive industry.

The semiconductor industry is highly competitive and many of our direct and indirect competitors and potential competitors have substantially greater financial, technological, manufacturing, and sales resources. If we are unable to compete successfully in this environment, our operating results could be harmed.

The current level of competition is high and may increase as our market expands. We compete directly with companies that have developed similar products. We also compete indirectly with numerous semiconductor companies that offer products and solutions based on alternative technologies. These direct and indirect competitors are established multinational semiconductor companies, as well as emerging companies. In addition, we may experience additional competition from foreign companies in the future.

We depend on a limited number of customers for a majority of our sales, making our financial results particularly susceptible to the loss of a key customer.

We anticipate that the concentration of our sales among a limited number of customers will continue in the future. We do not have long-term purchase commitments from any of our customers. Therefore, these customers could cease purchasing our products with limited notice and with no penalty.

Our dependence on a small number of customers increases the risks associated with the potential loss of customers resulting from business combinations or consolidations. If a customer were acquired or combined with another company, the resulting company could cancel purchase orders as part of the integration process.

We depend on third parties to fabricate silicon wafers and to assemble and test our products, which exposes us to a risk of production disruption or uncontrolled price changes.

We do not manufacture silicon wafers. We rely upon one primary wafer supplier, which is the sole source for certain of our products, and three assembly/test subcontractors. These suppliers do not have a contractual obligation or commitment to supply such wafers or services in the future. If the suppliers are unable or unwilling to supply wafers or services, our operating results could be harmed. We may not be able to find sufficient suppliers at a reasonable price or at all if such disruptions occur. As a result of our reliance on third parties, we face significant risks, including:

- reduced control over delivery schedules and quality,.
- longer lead times;
- the potential lack of adequate capacity during periods of excess industry demand;
- difficulties selecting and integrating new subcontractors;
- limited warranties on products supplied to us;
- potential increases in prices due to capacity shortages; and
- potential misappropriation of our intellectual property.

If we fail to deliver our products on time or if the costs of our products increase, then our profitability and customer relationships could be harmed.

Our international operations subject us to risks not present in solely domestic operations.

Our primary silicon wafer supplier and assembly subcontractors are located outside the United States. Financial difficulties, government actions or restrictions, prolonged work stoppages, or any other difficulties experienced by our suppliers could harm future operating results.

We also have many overseas customers. Our export sales are affected by unique risks frequently associated with foreign economics, including:

- governmental controls and trade restrictions;
- export license requirements and restrictions on the export of technology;
- changes in local economic conditions;
- political instability;
- changes in tax rates, tariffs, or freight rates;
- interruptions in air traffic; and
- difficulties in staffing and managing foreign sales offices.

Significant changes in the economic climate in the foreign countries from which we derive our export sales could harm future operating results.

The complex nature of semiconductors makes us highly susceptible to manufacturing problems and these problems could have a negative impact on future operating results.

Making semiconductors is a highly complex and precise process, requiring production in a tightly controlled, clean environment. Even minute imperfections in its materials, difficulties in the wafer fabrication process, defects in the masks used to print circuits on a wafer or other factors can cause a substantial percentage of wafers to be rejected or numerous chips on each wafer to be nonfunctional. We may experience problems in achieving an acceptable quality and yield rate in the manufacture of wafers. The interruption of wafer fabrication or the failure to achieve acceptable yields could harm future operating results. We may also experience manufacturing problems in our assembly and test operations, and in the introduction of new packaging materials.

We depend on third parties to deliver our products.

We rely on independent carriers and freight haulers to transport our products between manufacturing locations and to deliver products to our customers. Any transport or delivery problems because of their errors, or because of unforeseen interruptions, such as strikes, political instability, terrorism, natural disasters and accidents, could harm future operating results.

Earthquakes, other natural disasters, and power shortages may damage our business.

Our California facility and some of our suppliers are located near earthquake faults that have experienced major earthquakes in the past. In the event of a major earthquake or other natural disaster near our facility or a sustained loss of power at our facility, our operations could be harmed. Similarly, a major earthquake or other natural disaster near one or more of our suppliers could disrupt the operations of these suppliers, which could limit the supply of our products and harm our business.

We maintain high levels of inventory that decrease our liquidity and substantially increase the risk of write-offs.

We have historically maintained and expect to continue to maintain high levels of inventory of processed silicon wafers, packaging materials, and finished goods. For some product types, we must purchase all of our anticipated inventory needs for the life of the product in a short period of time. We commit capital to maintain these high inventory levels, which prevents us from using that capital for other purposes, such as research and development, and requires us to utilize more capital than might otherwise be required. Our high inventory levels also heighten the risk of inventory obsolescence and write-offs. Further, we may forecast demand incorrectly and produce insufficient inventory, resulting in supply shortages.

We currently have no bank credit facility and must rely solely upon existing cash reserves and funds from existing operations to finance future operations.

We rely upon cash reserves and available-for-sale securities to fund our operations. If these resources should be insufficient, we would be forced to obtain additional funding through debt or equity financing. If we are able to obtain debt financing, which is not assured, the terms of such financing are unknown, since we do not presently have a credit facility, and may be unfavorable to us. Similarly, there can be no assurance that we would be able to sell capital stock on favorable terms or at all and any such sales may adversely affect our existing shareholders.

Our operating success depends upon our ability to develop new products and access new technologies.

The semiconductor industry is a dynamic environment marked by rapid product obsolescence. Our future success depends on our ability to introduce new or improved products that meet critical customer needs, while achieving acceptable profit margins. If we fail to introduce these new products in a timely manner or these products fail to achieve market acceptance, operating results would be harmed. The introduction of new products in a dynamic market environment presents significant business challenges. Product development commitments and expenditures must be made well in advance of product sales, while the success of new products depends on accurate forecasts of long-term market demand and future technology developments.

Future revenue growth is dependent on market acceptance of new products and the continued market acceptance of existing products. The success of these products is dependent on a variety of specific technical factors, including:

- successful product definition;
- timely and efficient completion of product design;
- timely design into customers' future products and maintenance of close working relationships with customers;
- timely and efficient access to wafer manufacturing and assembly processes; and
- product performance, quality and reliability.

If, due to these or other factors, new products do not achieve market acceptance, our operating results would be harmed. Furthermore, to develop new products and maintain the competitiveness of existing products, we need to migrate to more advanced wafer manufacturing processes that use larger wafer sizes and smaller geometries.

The loss of key personnel or failure to hire and retain additional qualified personnel could impair our ability to develop and market our products.

Our future success greatly depends on the ability to attract and retain highly qualified technical and management personnel. As a small company, we are particularly dependent on a relatively small group of employees. Competition for skilled technical and management employees is intense in the semiconductor industry. As a result, we may be unable to retain our existing key technical and management employees, or attract additional qualified personnel, which could harm operating results. We do not have employment agreements with any of our employees.

Our failure to protect our proprietary rights, or the costs of protecting these rights, may harm our ability to compete.

We own several patents but rely primarily on our design know-how and continued access to advanced wafer process technology to develop and maintain our competitive position. We attempt to protect our trade secrets and other proprietary information through confidentiality agreements with employees, consultants, suppliers and customers. However, competitors may develop, patent or gain access to similar know-how and technology, or reverse engineer our products. Our inability to adequately protect these proprietary rights could result in our competitors offering similar products, potentially causing us to lose a competitive advantage and leading to decreased revenue. We may not obtain an adequate remedy in the event our confidentiality agreements are breached or any remedy if our trade secrets are independently developed by others. Despite our efforts to protect our proprietary rights, existing intellectual property laws afford only limited protection, especially under the laws of some foreign countries. Litigation may be necessary in the future to enforce our intellectual property rights, to protect our trade secrets or to determine the validity and scope of the proprietary rights of others. This litigation could result in substantial costs and diversion of resources.

We could be harmed by litigation involving patents and other intellectual property rights.

As a general matter, the semiconductor and related industries are characterized by substantial litigation regarding patent and other intellectual property rights. We have been and in the future may be accused of infringing the intellectual property rights of third parties. Furthermore, we may have certain indemnification obligations to customers with respect to the infringement of third-party intellectual property rights by our products. Infringement claims by third parties or claims for indemnification by customers or end-users of our products resulting from infringement claims may be asserted in the future and such assertions, if proven to be true, may harm our business.

Any litigation relating to the intellectual property rights of third parties, whether or not determined in our favor or settled by us, could be costly and could divert the efforts and attention of management and engineering personnel. In the event of any adverse ruling in any such litigation, we could be required to pay substantial damages, cease the manufacturing, use and sale of infringing products, discontinue the use of certain processes or obtain a license under the intellectual property rights of the third party claiming infringement. A license might not be available on reasonable terms, if at all.

The price of our common stock may continue to be volatile and our trading volume may continue to be relatively low.

The market price of our common stock has fluctuated significantly to date. In the future, the market price of the common stock could be subject to significant fluctuations due to general market conditions and in response to quarter-to-quarter variations in:

-
- our anticipated or actual operating results;
 - announcements or introductions of new products;
 - technological innovations or setbacks by us or our competitors;
 - conditions in the semiconductor markets;
 - the commencement of litigation; and
 - general economic and market conditions.

Item 1B. UNRESOLVED STAFF COMMENTS

This items is not applicable as we are not an accelerated filer as defined in Exchange Act Rule 12b-2.

Item 2. PROPERTIES

Our executive offices, as well as our inventories and research and development facilities, are located in approximately 17,200 square feet, in Sunnyvale, California, with a lease expiring August 31, 2014. We believe our facilities will be adequate to meet our reasonably foreseeable needs and, if necessary, alternative facilities will be available on acceptable terms, so as to meet our requirements.

Item 3. LEGAL PROCEEDINGS

From time to time, we receive demands from various parties asserting patent or other claims in the ordinary course of business. These demands are often not based on any specific knowledge of our products or operations. Because of the uncertainties inherent in litigation, the outcome of any such claim, including simply the cost of a successful defense against such a claim, could have a material adverse impact on us.

Item 4. REMOVED AND RESERVED

PART II

Item 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED SHAREHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Our Common Stock trades under the ticker symbol, LOGC, on The Nasdaq Capital Market. The following tables sets forth, for the period indicated, the high and low closing sales prices for our Common Stock, as reported by Nasdaq during the following calendar quarters:

| <u>Calendar Year</u> | <u>High</u> | <u>Low</u> |
|----------------------|-------------|------------|
| 2008 | | |
| Fourth quarter | \$1.01 | \$0.53 |
| 2009 | | |
| First quarter | \$0.69 | \$0.41 |
| Second quarter | \$0.61 | \$0.41 |
| Third quarter | \$1.10 | \$0.44 |
| Fourth quarter | \$2.65 | \$0.90 |

2010

| | | |
|----------------|--------|--------|
| First quarter | \$1.94 | \$1.19 |
| Second quarter | \$1.55 | \$1.00 |
| Third quarter | \$1.34 | \$0.49 |

*Holder*s

As of December 7, 2010, there were approximately 1,500 holders of record of our Common Stock.

Dividends

We have not paid any dividends on our Common Stock since our incorporation.

Performance Graph

The following graph, which is furnished rather than filed, compares the five-year cumulative total return on our Common Stock to the total returns on the S&P 500 Index and the NASDAQ Electronic Components Stock Index. This comparison assumes, in each case, that \$100 was invested on or about September 30, 2005 and all dividends were reinvested. Our fiscal year ends on September 30 each year.

* \$100 invested on 09/30/05 in stock or index including reinvestment of dividends.

Securities Authorized for Issuance Under Equity Compensation Plans

The following table sets forth the position of our equity compensation plans as of September 30, 2010:

| Plan Category | Number of securities to be issued upon exercise of outstanding options, warrants, and rights | Weighted-average exercise price of outstanding options, warrants, and rights | Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column a) |
|--|--|--|---|
| Equity compensation plans approved by security holders | 363,500 | \$1.246 | 1,070,000 |
| Equity compensation plans not approved by security holders | | | |
| Total | 363,500 | \$1.246 | 1,070,000 |

Item 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Reported financial results may not be indicative of the financial results of future periods. All non-historical information contained in the following discussion constitutes forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. These statements are not guarantees of future performance and involve a number of risks and uncertainties, including those identified in Item 1A Risk Factors of this Annual Report on Form 10-K. We undertake no obligation to revise or update these forward-looking statements to reflect events or circumstances after the date of this report.

Overview

LOGIC Devices Incorporated develops and markets high-speed digital integrated circuits that perform high-density storage and signal/image processing functions. Our products enable high definition video display, transport, editing, composition, and special effects. We also provide solutions for digital filtering in television broadcast stations and image enhancement in medical diagnostic scanning and imaging equipment.

Our products are used in the broadcast, medical, military and consumer electronics markets. Our products address storage and digital signal processing (DSP) requirements that involve high-performance arithmetic computation. We focus on developing proprietary catalog products to address specific functional application needs or performance levels that are not otherwise commercially available. We seek to provide related groups of circuits that original equipment manufacturers (OEMs) incorporate into high-performance electronic systems.

Liquidity and Capital Resources

Our operations used net cash of \$476,700, despite having a net loss of \$1,084,500 for fiscal 2010. Non-cash expenses, such as depreciation (\$296,400) and stock option vesting (\$49,600) affected the net loss, but not our cash position. The collection of accounts receivable produced \$182,700 and the sale of existing inventories produced \$114,100. We used \$53,100 of cash to pay down accrued expenses. During the year, we used \$421,600 and \$351,500 for capital expenditures (mainly mask and production tooling) and for capitalized test software, respectively. Lastly, we received \$250,000 from the private placement of common stock shares to our president.

Despite having a net loss of \$811,300, our operations produced net cash of \$261,300 for fiscal 2009. We wrote-off \$406,700 of inventories and \$49,400 of property and equipment no longer in use, all of which increased our net loss but did not affect cash flows from operations. The collection of accounts receivable produced \$298,900 and the reduction of prepaid expenses produced \$67,100 of net cash, respectively. During fiscal 2009, we also liquidated all \$975,000 of our auction rate securities (ARS), paid down the bank borrowings of \$975,000 based on those ARS, and made capital expenditures of \$310,300.

Working Capital

Our investment in inventories has been significant and will continue to be significant in the future. However, during the past few years, we have been able to reduce our levels of inventories as we shift from more competitive second source products to proprietary sole source products. We seek to further streamline our inventories as we continue to shift to sole source proprietary products.

We rely on third party suppliers for our raw materials, particularly our processed wafers, for which we currently rely primarily on two suppliers, and as a result, maintain substantial inventory levels to protect against disruption in supplies. We have periodically experienced disruptions in obtaining wafers. As we continue to shift towards higher margin proprietary products, we expect to be able to reduce inventory levels by streamlining our product offerings.

Periodically, we review inventory to determine recoverability of items on-hand using the lower-of-cost-or-market (LOCOM) and excess methods. We group and evaluate our products based on their underlying die or wafer type (our raw materials, silicon wafers, can generally be used to make multiple products), to determine the total quantity on-hand and average unit costs. Management uses judgment in comparing historical sales quantities to the quantity on-hand at the end of the fiscal year. If the quantity on-hand exceeds the sales quantities, we provide a valuation allowance for the potentially obsolete or slow-moving items. For the LOCOM analysis, we compare the average historical sales price to the average unit cost of inventories at the end of the fiscal year. If the average unit cost exceeds the average sales price, we provide a valuation allowance.

With continuing low revenue levels, management felt it necessary to also review our raw materials and work-in-process. Our products generally exhibit an active sales product life cycle of ten or more years. However, due to rapid changes in process technology, we are generally unable to obtain wafers for our products for as long a period as their life cycles. As a result, early in a product's life, we are often required to estimate the sales expectations for the entire life cycle and purchase materials upfront. On some occasions, our expectations become lower and we provide a reserve for potential excess materials. In fiscal 2009, we wrote down inventory of \$406,700. In fiscal 2008, we wrote down inventory against our inventory valuation allowance of \$1,573,700 and additional inventory totaling \$2,059,300. We did not write down any inventory during fiscal 2010 and believe our current inventory valuation provides a reasonable estimate of the recoverability of inventories at the end of fiscal 2010.

Although current levels of inventory impact our liquidity, we believe that this is a less costly alternative to owning a wafer fabrication facility or continuously redesigning our products to newer process technologies, which would divert limited engineering resources from new product development. We continue to evaluate alternative suppliers to diversify our risk of supply disruption. However, this requires a significant investment in product development to tool masks with new suppliers. Such efforts compete for our limited product development resources. We seek to achieve on-going reductions in inventory, although there can be no assurance we will be successful. In the event economic conditions remain slow, we may consider identifying additional portions of inventory to write-off at a future date.

Historically, due to customer order scheduling, up to 60% of our quarterly revenues were often shipped in the last month of the quarter, so a large portion of the shipments included in year-end accounts receivable were not yet due per our net 30-day terms. This results in year-end accounts receivable balances being at their highest point for the respective period.

Financing

Our cost reductions over the past few years have allowed us to generate enough cash from operations to fund current operations and future capital expenditures. As we have multiple new products being introduced, our capital requirements have increased substantially. Cash on-hand and cash from operations may not be sufficient to meet these increased demands.

As such, our continuance of operations may depend on raising additional working capital, and on the increase of revenues from new product introductions. Accordingly, these factors raise substantial doubt about the Company's ability to continue as a going concern. The Company is currently negotiating with several parties to provide debt and equity financing sufficient to finance corporate operations and provide working capital for the next twelve months. Although there is no assurance that management's plans will be realized, management believes that the Company will be able to continue operations in the future.

Contractual Obligations

Our only contractual obligation is our facility operating lease. The following table summarizes the future fixed payments under this lease as of September 30, 2010. Payment timing may be subject to change.

| | Total | Payments due by period: Within 1 year | 1-3 years | After 3 years |
|----------|-----------|--|-----------|---------------|
| Building | \$987,900 | \$239,700 | \$748,200 | |

Off-Balance Sheet Arrangements

We have no off-balance sheet arrangements.

Results of Operations

Comparison of Fiscal Years Ended September 30, 2010 and 2009

Net revenues for fiscal 2010 decreased 27 percent from \$3,013,200 in fiscal 2009 to \$2,193,300. This decrease was the result of the digital cinema project declining in fiscal 2010, while military purchases partially offset the decrease.

Cost of revenues for fiscal 2010 decreased 13 percent from \$1,268,800 in fiscal 2009 to \$1,110,000. This decrease is due to the decline in net revenues; however, the cost of revenues did not decrease as much as the net revenues due to certain fixed costs.

Research and development (R&D) expenses decreased 14 percent from \$1,159,300 in fiscal 2009 to \$997,700 in fiscal 2010. This decrease is the result of further salary and staffing cuts. However, as a percent of net revenues, R&D expenses actually increased in fiscal 2010 compared to fiscal 2009. This is mainly due to the decline in net revenues. During fiscal 2010, we capitalized development costs for test software aggregating \$351,500, which reduced our R&D expenses.

Selling, general and administrative expenses decreased 13 percent from \$1,399,800 in fiscal 2009 to \$1,211,600 in fiscal 2010. These reductions are due to salary cuts and reductions of other operating costs where possible.

Other income for fiscal 2010 consisted of the receipt of unclaimed property from the State of California aggregating \$44,200.

For fiscal 2010, the decreases in expenses did not offset the decrease in net revenues, resulting in 34 percent increase to our net loss from \$811,300 in fiscal 2009 to \$1,084,500.

Comparison of Fiscal Years Ended September 30, 2009 and 2008

Net revenues for fiscal 2009 decreased 10 percent from \$3,352,100 in fiscal 2008 to \$3,013,200. This decrease was the result of fewer military purchases during fiscal 2009 compared to fiscal 2008, while the digital cinema project actually increased during fiscal 2009.

Cost of revenues for fiscal 2009 decreased 70 percent from \$4,196,600 in fiscal 2008 to \$1,268,800, mainly the result of fiscal 2008 including a write-down of \$2,059,300 in inventories compared to \$406,700 in fiscal 2009. Sales of products previously written down to zero were 18 percent of revenues in fiscal 2009 compared to 27 percent in fiscal 2008.

Research and development expenses decreased 26 percent from \$1,563,400 in fiscal 2008 to \$1,159,300 in fiscal 2009, mainly the result of reduced work weeks for certain employees, salary cuts made in January 2009, and staffing cuts made at the end of fiscal 2008.

Selling, general and administrative expenses decreased six percent from \$1,483,200 in fiscal 2008 to \$1,399,800 in fiscal 2009. This decrease was primarily the result of reduced work weeks and other cost cuts made during fiscal 2009.

Interest income decreased 82 percent from \$56,700 in fiscal 2008 to \$10,300 in fiscal 2009, mainly the result of less cash being held with lower interest rates in fiscal 2009. Other expense consists of \$4,100 of property and equipment no longer in use and \$1,900 of interest expense.

As a result of fewer inventory write-downs and increased cost cutting during fiscal 2009, our net loss decreased from \$3,965,000 in fiscal 2008 to \$811,300 in fiscal 2009.

Critical Accounting Policies

Management's discussion and analysis of our financial condition and the results of operations are based upon the financial statements included in this report and the data used to prepare them. The financial statements have been prepared in accordance with the accounting principles generally accepted in the United States of America and we are required to make judgments, estimates, and assumptions in the course of such preparation. The Summary of Accounting Policies included with the financial statements describes the significant accounting policies and methods used in the preparation of the financial statements. On an ongoing basis, we reevaluate our judgments, estimates, and assumptions, including those related to revenue recognition, allowance for doubtful accounts, valuation of inventories, and valuation of long-lived assets. We base our judgments and estimates on historical experience, knowledge of current conditions, and our beliefs of what could occur in the future considering available information. Actual results may differ from these estimates under different assumptions or conditions. The following are the critical accounting policies we believe are affected by significant judgments, estimates, and assumptions used in the preparation of the financial statements.

Revenue Recognition

Revenue is generally recognized upon shipment of product. Sales to distributors are made pursuant to agreements that provide the distributors certain rights of return and price protection on unsold merchandise. Revenues from such sales are recognized upon shipment, with a provision for estimated returns and allowances recorded at that time, if applicable. While distributors are allowed to return items for stock rotation, they are required to place an order of equal or greater value at the same time. As the Company historically does not have material returns, there is no allowance for returns recorded. Because the Company does not change its pricing of products more than once a year, there have not been any pricing issues in the past several years; therefore, there is no allowance for price protection recorded.

Allowance for Doubtful Accounts

We establish a general allowance for doubtful accounts based on analyzing historical bad debts, specific customer creditworthiness, and current economic conditions. Historically, we have not experienced significant losses related to receivables.

Inventories

We write down our inventories for lower of cost or market reserves, aged inventory reserves, and obsolescence reserves. As a result of production requirements and constraints, we are often required to estimate the sales expectations for the entire life cycle of a product (which can be ten or more years) and purchase materials upfront. If actual product demand or selling prices are less favorable than estimated, additional inventory write-downs may be required in the future. Conversely, if demand increases for product types that have been fully reserved, future margins may be higher.

Capitalized Software Costs

Internal test computer software development costs are capitalized as incurred during the application development stage. The capitalized software costs are classified as other assets and are amortized on a straight-line basis over the shorter of the related expected product life cycle or five years, with amortization beginning when production parts are in process.

Long-Lived Assets

Long-lived assets, including property and equipment, goodwill, and other intangible assets, are assessed for possible impairment whenever events or changes in circumstances indicate that the carrying amounts may not be recoverable, or whenever management has committed to a plan to dispose of the assets. Such assets are carried at the lower of book value or fair value as estimated by management based on appraisals, current market value, and comparable sales value, as appropriate. Assets to be held and used affected by such impairment loss are depreciated or amortized at their new carrying amounts over the remaining estimated life; assets to be sold or otherwise disposed of are not subject to further depreciation or amortization. In determining whether an impairment exists, we use undiscounted future cash flows without interest charges compared to the carrying value of the assets.

Deferred Income Taxes

Income taxes are accounted for using the asset and liability method. Deferred income tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases and operating loss and tax credit carryforwards. Deferred income tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred income tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date. Future tax benefits are subject to a valuation allowance when we are unable to conclude that our deferred income tax assets will more likely than not be realized from the results of operations. We have recorded a valuation allowance to reflect the estimated amount of deferred income tax assets that may not be realized. The ultimate realization of deferred income tax assets is dependent upon generation of future taxable income during the periods in which those temporary differences become deductible. We consider projected future taxable income and tax planning strategies in making this assessment.

Based on the historical taxable income and projections for future taxable income over the periods in which the deferred tax assets become deductible, management believes it more likely than not that we will not realize benefits of these deductible differences as of September 30, 2010. Accordingly, we have established a valuation allowance against our net deferred income tax assets as of September 30, 2010.

Impact of New Financial Accounting Standards

In January 2010, the Financial Accounting Standards Board issued amended standards that require additional fair value disclosures. These disclosure requirements are effective in two phases. In the first quarter of 2010, we adopted the requirements for disclosures about inputs and valuation techniques used to measure fair value as well as disclosures about significant transfers. Beginning in the first quarter of 2011, these amended standards will require presentation of disaggregated activity within the reconciliation for fair value measurements using significant unobservable inputs (Level 3). These amended standards do not affect our statements of operations or balance sheets.

Item 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The Company conducts all of its transactions, including those with foreign suppliers and customers, in U.S. dollars. It is therefore not directly subject to the risks of foreign currency fluctuations and does not hedge or otherwise deal in currency instruments in an attempt to minimize such risks. Demand from foreign customers and the ability or willingness of foreign suppliers to perform their obligations to the Company may be affected by the relative change in value of such customer or supplier's domestic currency to the value of the U.S. dollar. Furthermore, changes in the relative value of the U.S. dollar may change the price of the Company's prices relative to the prices of its foreign competitors.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Shareholders and Board of Directors

LOGIC Devices Incorporated

Sunnyvale, California

We have audited the accompanying balance sheets of LOGIC Devices Incorporated as of September 30, 2010 and 2009, and the related statements of operations, shareholders' equity, and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of LOGIC Devices Incorporated as of September 30, 2010 and 2009, and the results of its operations and its cash flows for the years then ended in conformity with U.S. generally accepted accounting principles.

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in the Summary of Accounting Policies to the financial statements, the Company has suffered recurring losses from operations and requires additional funds to maintain its operations. This raises substantial doubt about the Company's ability to continue as a going concern. Management's plans in regard to these matters are also described in the Summary of Accounting Policies to the financial statements. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

See accompanying Summary of Accounting Policies and Notes to Financial Statements.

LOGIC Devices Incorporated

Summary of Accounting Policies

The Company and Nature of Business

LOGIC Devices Incorporated (the Company) develops and markets high-performance integrated circuits. The Company's products include chips that are used in digital communications, broadcast and medical imaging processing applications, instrumentation, and smart weapons systems. The Company markets its products worldwide, such that 71 percent of the Company's net revenues in fiscal 2010 were derived from original equipment manufacturers, while sales through distributors accounted for approximately 29 percent of net revenues. Approximately 74 percent of the Company's fiscal 2010 net revenues were from domestic sales and approximately 26 percent from foreign sales.

Basis of Presentation

The accompanying financial statements have been prepared assuming the Company will continue as a going concern. This contemplates that assets will be realized and liabilities and commitments satisfied in the normal course of business. We have incurred operating losses in the past four years and require additional funds to maintain our operations. The Company's continuance of operations is contingent on raising additional working capital, and on the increase of revenues from new product introductions. Accordingly, these factors raise substantial doubt about the Company's ability to continue as a going concern. The Company is currently negotiating with several parties to provide debt and equity financing sufficient to finance corporate operations and provide working capital for the next twelve months. Although there is no assurance that management's plans will be realized, management believes that the Company will be able to continue operations in the future. The financial statements do not include any adjustments relating to the recoverability and classification of recorded assets, or the amounts and classification of liabilities that might be necessary in the event the Company cannot continue operating as a going concern.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Fair Value of Financial Instruments

The carrying amounts of cash and cash equivalents, available-for-sale securities, accounts receivable, and accounts payable approximate fair value because of the short maturity of these items.

Cash and Cash Equivalents

The Company considers all highly liquid investments with original maturities of three months or less to be cash equivalents.

Accounts Receivable

The Company establishes a general allowance for doubtful accounts based on its analysis of historical bad debts, specific customer creditworthiness, and current economic conditions. Historically, the Company has not experienced significant losses related to receivables. At September 30, 2010 and 2009, the Company determined that no allowance for doubtful accounts was necessary.

Inventories

Inventories of raw materials, work-in-process, and finished goods are stated at the lower of cost (first-in, first-out) or market. Cost includes the purchase price of parts, assembly costs, and overhead.

Property and Equipment

Property and equipment are stated at cost. Depreciation on equipment is calculated on the straight-line method over the estimated useful lives of the assets, generally three to seven years. Leasehold improvements and assets held under capital lease are amortized on a straight-line basis over the shorter of the lease terms or the estimated lives of the assets. Certain tooling costs are capitalized by the Company and are amortized on a straight-line basis over the shorter of the related product life cycle or five years. Upon disposition, the cost and related accumulated depreciation or accumulated amortization is removed from the accounts and the resulting gain or loss is reflected in income for the period.

Capitalized Software Costs

Internal test computer software development costs are capitalized as incurred during the application development stage. The capitalized software costs are classified as other assets and are amortized on a straight-line basis over the shorter of the related expected product life cycle or five years, with amortization beginning when production parts are in process.

Revenue Recognition

Revenue is generally recognized upon shipment of product. Sales to distributors are made pursuant to agreements that provide the distributors certain rights of return and price protection on unsold merchandise. Revenues from such sales are recognized upon shipment, with a provision for estimated returns and allowances recorded at that time, if applicable. While distributors are allowed to return items for stock rotation, they are required to place an order of equal or greater value at the same time. As the Company historically does not have material returns, there is no allowance for returns recorded. Because the Company does not change its pricing of products more than once a year, there have not been any pricing issues in the past several years; therefore, there is no allowance for price protection recorded.

Research and Development Costs

Research and development costs are expensed to operations as incurred.

Shipping and Handling Costs

Shipping and handling costs are expensed to cost of revenues as incurred.

Income Taxes

Deferred income tax assets and liabilities are recognized based on the temporary differences between the financial statement and income tax basis of assets, liabilities, and net operating loss and tax credit carryforwards using enacted tax rates. Valuation allowances are established for deferred tax assets to the extent of the likelihood that the deferred tax assets may not be realized.

Income (Loss) Per Common Share

Basic income (loss) per share is calculated by dividing net income or loss by the weighted average common shares outstanding during the period. Diluted income (loss) per share reflects the net incremental shares that would be issued if dilutive outstanding stock options were exercised, using the treasury stock method. In the case of a net loss, no incremental shares would be issued because they are antidilutive. Stock options with exercise prices above the average market price during the period are also antidilutive.

There were 363,500 and 310,500 common stock options outstanding at September 30, 2010 and 2009, respectively. These options were not considered in calculating diluted net loss per common share as their effect would have been antidilutive. As a result, for fiscal 2010, and 2009, the Company's basic and diluted net loss per common share is the same.

Long-lived Assets

Long-lived assets, including property and equipment and intangible assets, are assessed for possible impairment whenever events or changes in circumstances indicate that the carrying amounts may not be recoverable, or whenever management has committed to a plan to dispose of the assets. Such assets are carried at the lower of book value or fair value as estimated by management based on appraisals, current market value, and comparable sales value, as appropriate. Assets to be held and used affected by such impairment loss are depreciated or amortized at their new carrying amounts over the remaining estimated lives; assets to be sold or otherwise disposed of are not subject to further depreciation or amortization. In determining whether an impairment exists, the Company uses undiscounted future cash flows without interest charges compared to the carrying value of the assets.

Share-based Payments

The Company issues common stock options to its employees, certain consultants, and certain of its board members. The Company measures the cost of services received in exchange for an award of equity instruments based on the grant-date fair value of the award. That cost is recognized over the period during which services are provided in exchange for the award, known as the requisite service period (usually the vesting period).

In calculating compensation related to stock option grants, the fair value of each stock option is estimated on the date of grant using the Black-Scholes option-pricing model and the following weighted average assumptions:

| | <i>2010</i> | <i>2009</i> |
|--------------------------|-------------|-------------|
| Dividend yield | None | None |
| Expected volatility | 133.3% | 148.2% |
| Expected forfeiture rate | 32% | 10% |
| Risk-free interest rate | 1.3% | 1.5% |
| Expected term (years) | 4.0 | 4.0 |

The computation of expected volatility used in the Black-Scholes option-pricing model is based on the historical volatility of our share price. The expected term is estimated based on a review of historical exercise behavior with respect to option grants.

Segment Reporting

The Company is organized in a single operating segment for purposes of making operating decisions and assessing performance. The president (the chief operating decision maker) evaluates performance, makes operating decisions, and allocates resources based on financial data consistent with the presentation in the accompanying financial statements.

Impact of New Financial Accounting Pronouncements

In January 2010, the Financial Accounting Standards Board issued amended standards that require additional fair value disclosures. These disclosure requirements are effective in two phases. In the first quarter of 2010, we adopted the requirements for disclosures about inputs and valuation techniques used to measure fair value as well as disclosures about significant transfers. Beginning in the first quarter of 2011, these amended standards will require presentation of disaggregated activity within the reconciliation for fair value measurements using significant unobservable inputs (Level 3). These amended standards do not affect our statements of operations or balance sheets.

LOGIC Devices Incorporated

Notes to Financial Statements

1. Inventories

A summary of inventories follows:

| | <i>September 30, 2010</i> | <i>September 30, 2009</i> |
|-----------------|-------------------------------|-------------------------------|
| Raw materials | \$ 92,100 | \$ 38,700 |
| Work-in-process | 181,300 | 194,800 |
| Finished goods | 690,200 | 844,200 |
| | \$ 963,600 | \$1,077,700 |

2. Property and Equipment

A summary of property and equipment follows:

| | <i>September 30, 2010</i> | <i>September 30, 2009</i> |
|-------------------------------|-------------------------------|-------------------------------|
| Equipment | \$1,208,300 | \$1,187,500 |
| Tooling costs | 934,200 | 535,800 |
| Leasehold improvements | 197,200 | 194,700 |
| | 2,339,700 | 1,918,000 |
| Less accumulated depreciation | 1,398,000 | 1,101,600 |
| | \$ 941,700 | \$ 816,400 |

Depreciation expense for fiscal 2010 and 2009 was \$296,400 and \$322,300, respectively.

3. Capitalized Software

During fiscal 2010, the Company capitalized test software development costs totaling \$351,500 for products that are in the application development stage. There was no amortization expense related to capitalized software during fiscal 2010 and 2009. There was no capitalization of test software development costs in fiscal 2009.

4. Share-Based Compensation

The Company issues options to purchase common stock to its employees, certain consultants, and certain of its board members. Options are generally granted with an exercise price equal to the closing market value of a common share at the date of grant, have five- to ten-year terms and typically vest over periods ranging from immediately to three years from the date of grant. There are 1,070,000 authorized shares remaining for granting of future options.

The estimated fair value of equity-based awards, less expected forfeitures, is amortized over the awards' vesting period on a straight-line basis. Share-based compensation expense recognized in the statements of operations for fiscal years ended September 30, 2010 and 2009 related to common stock options was \$49,600 (\$0.73 per share) and \$6,500 (\$0.12 per share), respectively. The Company did not record income tax benefits related to the equity-based compensation expense as deferred tax assets are fully offset by a valuation allowance.

A summary of nonvested shares at September 30, 2010 and changes during the fiscal year then ended follows:

| | <i>Shares</i> | <i>Weighted Average Grant Date Fair Value</i> |
|--|---------------|---|
| Nonvested shares at October 1, 2009 | 33,750 | \$0.60 |
| Granted | 90,000 | \$1.38 |
| Vested | (67,500) | \$1.31 |
| Forfeited/Expired | | |
| Nonvested shares at September 30, 2010 | 56,250 | \$1.01 |

A summary of changes in common stock options outstanding under the equity-based compensation plans for the fiscal years ended September 30, 2009 and 2008 follows:

| | <i>Common Stock Options</i> | <i>Weighted Average Exercise Price</i> | <i>Weighted Average Remaining Contractual Term (Years)</i> | <i>Aggregate Intrinsic Value</i> |
|-----------------------------------|-------------------------------------|--|--|--|
| Outstanding at September 30, 2008 | 337,500 | \$1.595 | 2.57 | \$ |
| Granted | 90,000 | \$0.53 | | |
| Exercised | | | | |
| Forfeited/Expired | (73,000) | \$1.958 | | |
| Outstanding at September 30, 2009 | 354,500 | \$1.250 | 3.38 | \$32,400 |
| Granted | 90,000 | \$1.376 | | |
| Exercised | (5,000) | \$0.60 | | \$3,000 |
| Forfeited/Expired | (76,000) | \$1.458 | | |
| Outstanding at September 30, 2010 | 363,500 | \$1.246 | 3.97 | \$13,900 |
| Exercisable at September 30, 2010 | 307,250 | \$1.293 | 3.06 | \$11,900 |
| Exercisable at September 30, 2009 | 320,750 | \$1.318 | 2.71 | \$22,600 |

Edgar Filing: LOGIC DEVICES Inc - Form 10-K

The weighted average fair value of options granted during the fiscal years ended September 30, 2010 and 2009 was \$1.03 and \$0.29, respectively. As September 30, 2010, there was \$31,100 of total unrecognized compensation cost related to nonvested options granted under the plans. That cost is expected to be recognized over the next three years. The total fair value of options vested during the fiscal years ended September 30, 2010 and 2009 was \$49,600 and \$6,500, respectively.

5. Shareholders Equity and Related Party Transaction

On September 29, 2010, the Company raised \$250,000 from the private placement of 357,143 shares of Common Stock to the Company's president.

6. Commitments and Contingencies

Leases

The Company leases its facilities under an operating lease, which requires the Company to pay certain maintenance and operating expenses, such as taxes, insurance, and utilities. Rent expense under the various leases was \$239,300 for fiscal 2010 and 2009.

A summary of future minimum payments required under non-cancelable operating leases with terms in excess of one year, follows:

| | <i>Amount</i> |
|-----------------------------|---------------|
| <i>Fiscal years ending:</i> | |
| September 30, 2011 | \$239,700 |
| September 30, 2012 | 248,100 |
| September 30, 2013 | 257,300 |
| Thereafter | 242,800 |
| | \$987,900 |

Contingencies

The Company is subject to legal proceedings and claims that arise in the ordinary course of business. In the opinion of management, the amount of ultimate liability with respect to such actions will not materially affect the financial position or results of operations of the Company.

7. Provisions for Income Taxes

Edgar Filing: LOGIC DEVICES Inc - Form 10-K

The provision for income taxes for fiscal 2010 and 2009 includes a current state expense of \$2,900 and \$900, respectively. The following summarizes the difference between the income tax expense and the amount computed by applying the Federal income tax rate of 34 percent in fiscal 2010 and 2009, to the loss before taxes:

| | <i>2010</i> | <i>2009</i> |
|---|-------------|-------------|
| Federal income tax benefit at statutory rate | \$(367,700) | \$(275,500) |
| Tax credit carryforwards originated in current year | (46,400) | (33,000) |
| State tax benefit, net of federal tax benefit | (60,400) | (46,800) |
| Adjustment of prior year net operating loss carryforwards before valuation allowance | 2,600 | 10,700 |
| Valuation allowance | 474,800 | 341,200 |
| Other, net | \$2,900 | \$900 |

Deferred tax assets and liabilities comprise the following:

| | <i>September 30,</i> 2010 | <i>September 30,</i> 2009 |
|----------------------------------|------------------------------|------------------------------|
| Deferred tax assets: | | |
| Net operating loss carryforwards | \$8,783,000 | \$8,416,200 |
| Tax credit carryforwards | 735,300 | 634,900 |
| Gross deferred tax assets | 9,518,300 | 9,051,100 |
| Deferred tax liabilities: | | |
| State tax benefit | (618,300) | (581,300) |
| Other | (21,000) | (41,300) |
| Net deferred tax assets | 8,879,000 | 8,428,500 |
| Valuation allowance | (8,879,000) | (8,428,500) |
| Net deferred taxes | \$ | \$ |

The valuation allowance increased \$450,500 from fiscal 2009 to fiscal 2010. This was the result of an increase in the net deferred tax assets, primarily net operating loss carryforwards (NOLs), partially offset by the increase in the state tax benefit liability. Because the Company's management is unable to determine whether it is more likely than not that the net deferred tax assets will be realized, the Company continues to record a 100 percent valuation against the net deferred tax assets.

As of September 30, 2010, the Company has Federal and State NOLs totaling approximately \$21,687,400 and \$15,942,400, respectively, available to offset future taxable income. These NOLs expire at various times through 2029 and 2019, respectively. The Company also has Federal and State research and development credit carryforwards totaling approximately \$277,000 and \$114,700, respectively, expiring at various times through 2029. The Company has state manufacturing tax credit carryforwards totaling approximately \$289,600, which expire at various times through 2012.

Utilization of the Company's net operating loss and tax credit carryforwards may be subject to a substantial annual limitation due to ownership change limitations provided by the Internal Revenue Code and similar state provisions. Such an annual limitation could result in the expiration or elimination of the net operating loss and tax credit carryforwards before utilization.

We adopted authoritative guidance related to accounting for uncertain tax positions on October 1, 2007. As of the date of adoption, the Company had no unrecognized income tax benefits. Should the Company incur interest and penalties relating to tax uncertainties, such amounts would be classified as a component of interest expense and operating expense, respectively.

At September 30, 2010, the Company no increase or decrease in unrecognized income tax benefits for the fiscal year and there was no accrued interest or penalties relating to tax uncertainties at September 30, 2010. Unrecognized income tax benefits are not expected to increase or decrease within the next 12 months.

The Company is subject to income tax in the U.S. federal and California and New Hampshire state jurisdictions. The years still open to audit for the U.S. federal and New Hampshire state jurisdiction are 2007 through 2009 and for the California state jurisdiction are 2006 through 2009. However, because the Company has net operating losses and credits carried forward in both these jurisdictions, certain items attributable to closed tax years are still subject to adjustment by applicable taxing authorities through an adjustment to tax attributes carried forward to open years.

8. Major Customers, Major Suppliers, and Export Sales

Major Customers and Suppliers

For fiscal 2010, three customers account for approximately 22, 16, and 15 percent of net revenues. The 22 percent customer had no outstanding accounts receivable as of September 30, 2010, while the 16 and 15 percent customers had accounts receivable of \$22,100 and \$17,500, respectively. For fiscal 2009, two customers account for approximately 41 and 32 percent of net revenues, with accounts receivable of \$159,400 and \$142,000 as of September 30, 2009, respectively.

For fiscal 2010, three suppliers comprised 10 or more percent of the total inventory purchases (48, 24, and 12 percent). For fiscal 2009, three suppliers comprised 10 or more percent of the total inventory purchases (49, 21, and 14 percent).

Export Sales

The following table summarizes export sales information:

| | <i>2010</i> | <i>2009</i> |
|----------------|-------------|-------------|
| Western Europe | \$325,600 | \$225,000 |
| Far East | 240,700 | 180,800 |
| Other | \$566,300 | \$405,800 |

In fiscal 2010 and 2009, no one country accounted for more than 10 percent of net revenues.

9. Use of Estimates and Concentrations of Credit Risks

The Company's financial statements are prepared in accordance with accounting principles generally accepted in the United States of America, which require the use of management estimates. These estimates are impacted, in part, by the following risks and uncertainties:

Financial instruments, which potentially subject the Company to concentration of credit risk, consist principally of cash and cash equivalents and trade receivables. The Company places its cash and cash equivalents and available-for-sale securities with high quality financial institutions, and, by policy, limits the amounts of credit exposure to any one financial institution as much as practicable.

A large portion of the Company's accounts receivable have historically been derived from one major class of customer (foreign distributors) with the remainder being spread across many other customers in various electronic industries. The Company believes any risk of accounting loss is significantly reduced due to the diversity of its products, end-customers, and geographic sales areas. The Company performs credit evaluations of its customers' financial condition whenever necessary. The Company generally does not require cash collateral or other security to support customer receivables.

The Company currently is dependent on one primary supplier as its wafer-processing source. If this supply was to be interrupted or the terms were to become unfavorable to the Company, this could have a material adverse impact on the Company's operations.

The Company produces inventory based on orders received and forecasted demand. The Company must order wafers and build inventory well in advance of product shipments. Due to the Company's reliance upon a limited number of suppliers, high levels of inventory are also maintained to protect against a disruption in supply. Because the Company's markets are volatile and subject to rapid technology and price changes, there is a risk that the Company will forecast incorrectly and produce excess or insufficient inventories of particular products. This inventory risk is heightened because many of the Company's customers place orders with short lead times. Demand will differ from forecasts and such differences may have a material effect on actual operations.

10. Statements of Cash Flows

During fiscal 2009, we paid \$1,900 for interest, while there was no interest paid during fiscal 2010. In fiscal 2010 and 2009, the Company paid \$2,900 and \$900 for income taxes, respectively. There were no non-cash investing and financing activities during fiscal 2010 and 2009.

11. 401(k) Savings Plan

The Company adopted a 401(k) Savings Plan (the Plan) in September 2005. Employees are able to make voluntary contributions and the Company has the discretion to make matching contributions. The Plan covers all employees meeting certain age and service requirements. The Company funds expenses incurred in connection with the Plan. The Company made no matching contributions in fiscal 2010 and 2009.

12. Subsequent Events

On November 9, 2010, the Company raised \$50,000 from the private placement of 62,500 shares of Common Stock to the Company's Chairman of the Board. On December 6, 2010, the Company raised \$50,000 from the private placement of 83,333 shares of Common Stock to the Company's president. On December 9, 2010, the Company raised \$50,000 from the private placement of 75,758 shares of Common Stock to the Company's Chairman of the Board.

Item 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not applicable.

Item 9A. CONTROLS AND PROCEDURES

(a) Evaluation of Disclosure Controls and Procedures

We maintain disclosure controls and procedures (as defined in Rule 13a15(e) and 15d-15(e) under the Securities Exchange Act of 1934) designed to ensure that information we are required to disclose in reports that we file or submit under the Securities Exchange Act of 1934 is accumulated and communicated to our management, including our principal executive and principal financial officers, as appropriate to allow timely decisions regarding required disclosures, and that such information is recorded, processed, summarized, and reporting within the time periods specified in Securities and Exchange Commission rules and forms. Our management evaluated, with the participation of our Chief Executive Officer and Chief Financial Officer, the effectiveness of our disclosure controls and procedures as of the end of the period covered by this Annual Report on Form 10-K. Based on this evaluation, our Chief Executive Officer and our Chief Financial Officer have concluded that our disclosure controls and procedures were effective as of September 30, 2010.

(b) Management's Annual Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934. Our internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Internal control over financial reporting includes those policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- Provide reasonable assurance that transactions as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company, and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. In addition, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become ineffective because of changes in conditions and that the degree of compliance with the policies or procedures may deteriorate.

Management assessed the effectiveness of the Company's internal control over financial reporting as of September 30, 2010. In making this assessment, management used the criteria set forth in the *Internal Control-Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

As a result of its assessment of internal control over financial reporting, management has concluded that, as of September 30, 2010, the Company's internal control over financial reporting was effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States.

This Annual Report on Form 10-K does not include an attestation report of our registered public accounting firm regarding internal control over financial reporting. Management's report was not subject to attestation by our registered public accounting firm pursuant to rules of the SEC that permit us to provide only management's report in this Annual Report.

(c) Changes in Internal Control Over Financial Reporting

There was no change in our internal control over financial reporting that occurred during the fourth quarter of fiscal 2010 that has material affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. OTHER INFORMATION

Not applicable.

PART III

Item 10. DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT.

Information required by this Item is incorporated by reference from our proxy statement for our 2011 Annual Meeting, expected to be filed with the SEC no later than January 28, 2011.

Item 11. EXECUTIVE COMPENSATION

Information required by this Item is incorporated by reference from our proxy statement for our 2011 Annual Meeting, expected to be filed with the SEC no later than January 28, 2011.

Item 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED SHAREHOLDER MATTERS.

Information required by this Item is incorporated by reference from our proxy statement for our 2011 Annual Meeting, expected to be filed with the SEC no later than January 28, 2011.

Item 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

Information required by this Item is incorporated by reference from our proxy statement for our 2011 Annual Meeting, expected to be filed with the SEC no later than January 28, 2011.

Item 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

Information required by this Item is incorporated by reference from our proxy statement for our 2011 Annual Meeting, expected to be filed with the SEC no later than January 28, 2011.

PART IV

Item 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

(A) The following documents are filed as part of this report:

- (1) Our Financial Statements, Summary of Accounting Policies, and Notes to Financial Statements appear at pages 18 to 31 of this report; see Index to Financial Statements at page 17 of this report.
 - (2) Our Index to Exhibits appears at page 35 of this report.
-

SIGNATURES

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, as amended, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.
