UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-K
ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d)
OF THE SECURITIES EXCHANGE ACT OF 1934
For the fiscal year ended December 31, 2005
Commission file number: 0-28288

Cardiogenesis Corporation

(Exact name of Registrant as specified in its charter)

California
(State of incorporation)

77-0223740
(I.R.S. Employer Identification Number)

26632 Towne Center Drive, Suite 320

Foothill Ranch, California 92610

(Address of principal executive offices)

(714) 649-5000

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(g) of the Act:

Common Stock, no par value

(Title of Class)

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated herein by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicated by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act).

Yes No

The aggregate market value of the voting and non-voting common equity held by non-affiliates of the registrant was approximately \$20,578,449 as of June 30, 2005, based upon the closing sale price reported for that date of \$0.55 on the OTC Bulletin Board on such date. Shares of Common Stock held by each officer and director and by each

person who owns 5% or more of the outstanding Common Stock have been excluded because such persons may be deemed to be affiliates. This determination of affiliate status is not necessarily a conclusive determination for any other purpose.

Indicate the number of shares outstanding of each of the issuer's classes of common stock outstanding as of the latest practicable date:

45,273,701 shares
As of June 30, 2006

This Annual Report on Form 10-K contains forward-looking statements that involve risks and uncertainties. The statements contained herein that are not purely historical are forward-looking statements within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act, including without limitation statements regarding our expectations, beliefs, intentions or strategies regarding the future. All forward-looking statements included in this document or incorporated by reference herein are based on information available to us on the date hereof, and we assume no obligation to update any such forward-looking statements. Our actual results could differ materially from those anticipated in these forward-looking statements as a result of certain factors, including those set forth in Item 1A of this Part I and elsewhere.

General

Cardiogenesis Corporation, incorporated in California in 1989, designs, develops and distributes laser-based surgical products and disposable fiber-optic accessories for the treatment of advanced cardiovascular disease through transmyocardial revascularization (TMR) and percutaneous myocardial channeling (PMC). PMC was formerly referred to as percutaneous myocardial revascularization (PMR). The new name PMC more literally depicts the immediate physiologic tissue effect of the Cardiogenesis PMC system to ablate precise, partial thickness channels into the heart muscle from the inside of the left ventricle. TMR and PMC are recent laser-based heart treatments in which channels are made in the heart muscle. Many scientific experts believe these procedures encourage new vessel formation, or angiogenesis. TMR is performed by a cardiac surgeon through a small incision in the chest under general anesthesia. PMC is performed by an interventional cardiologist in a catheter-based procedure which utilizes local anesthesia. Clinical studies have demonstrated a significant reduction in angina and increase in exercise duration in patients treated with TMR or PMC plus medications, when compared with patients who received medications alone.

In May 1997, we received CE Mark approval for our TMR system and in April 1998 we received CE Mark approval for our PMC system. The CE Mark allows us to commercially distribute these products within the European Community. The CE Marking is an international symbol of adherence to quality assurance standards and compliance with applicable European medical device directives. In February 1999, we received approval from the Food and Drug Administration (FDA) for the marketing of our TMR products for treatment of stable patients with severe angina. Effective July 1999, the Centers for Medicare and Medicaid Services (CMS), formerly known as the Health Care Financial Administration (HCFA) implemented a national coverage decision for Medicare coverage for any TMR as a primary and secondary procedure.. As a result, hospitals and physicians are eligible to receive Medicare reimbursement for TMR equipment and procedures on indicated Medicare patients.

We have completed pivotal clinical trials involving PMC, and study results were submitted to the FDA in a pre market approval (PMA) application in December 1999 along with subsequent amendments. In July 2001, the FDA Advisory Panel recommended against approval for PMC. In February 2003, the FDA granted an independent panel review of our pending PMA application for PMC by the Medical Devices Dispute Resolution Panel (MDDRP). In July 2003, the FDA agreed to review additional data in support of our PMA supplement for PMC under the structure of an interactive review process between us and the FDA review team. The independent panel review by the MDDRP was cancelled in lieu of the interactive review, but the FDA has agreed to reschedule the MDDRP hearing in the future, if the dispute cannot be resolved.

In August 2004, we met with the FDA and agreed on the steps needed to design and initiate a new clinical trial to confirm the safety and efficacy of PMC. In January 2005, we again met with the agency and agreed on major trial parameters. We came to agreement with the FDA on a final trial design and received formal FDA approval in January 2006. We are currently working to understand the specific direct and indirect costs and are initiating our pursuit of a corporate partner in the interventional cardiology arena. There can be no assurance, however, that we will attract the necessary capital required to support the trial or that we will receive a favorable determination from the FDA.

Table of Contents

Background

According to the American Heart Association, cardiovascular disease is the leading cause of death and disability in the U.S. Coronary artery disease is the principal form of cardiovascular disease and is characterized by a progressive narrowing of the coronary arteries which supply blood to the heart. This narrowing process is usually due to atherosclerosis, which is the buildup of fatty deposits, or plaque, on the inner lining of the arteries. Coronary artery disease reduces the available supply of oxygenated blood to the heart muscle, potentially resulting in severe chest pain known as angina, as well as damage to the heart. Typically, the condition worsens over time and often leads to heart attack and/or death.

Based on standards promulgated by the Canadian Heart Association, angina is typically classified into four classes, ranging from Class 1, in which angina pain results only from strenuous exertion, to the most severe, Class 4, in which the patient is unable to conduct any physical activity without angina and angina may be present even at rest. In 2003, The American Heart Association estimated that more than 6.5 million Americans experience angina symptoms, growing at a rate of 8% per year.

The primary therapeutic options for treatment of coronary artery disease are drug therapy, balloon angioplasty also known as percutaneous transluminal coronary angioplasty (PTCA) with stenting, other interventional techniques for percutaneous coronary intervention (PCI), and coronary artery bypass grafting or (CABG). The objective of each of these approaches is to increase blood flow through the coronary arteries to the heart.

Drug therapy may be effective for mild cases of coronary artery disease and angina either through medical effects on the arteries that improve blood flow without reducing the plaque or by decreasing the rate of formation of additional plaque (e.g., by reducing blood levels of cholesterol). Because of the progressive nature of the disease, however, many patients with angina ultimately undergo either PTCA or CABG.

Introduced in the early 1980s, PTCA is a less-invasive alternative to CABG in which a balloon-tipped catheter is inserted into an artery, typically near the groin, and guided to the areas of blockage in the coronary arteries. The balloon is then inflated and deflated at each blockage site, thereby rupturing the blockage and stretching the vessel. Although the procedure is usually successful in widening the blocked channel, the artery often re-narrows within six months of the procedure, a process called restenosis, often necessitating a repeat procedure. A variety of techniques for use in conjunction with PTCA have been developed in an attempt to reduce the frequency of restenosis, including stent placement and atherectomy. Stents are small metal frames delivered to the area of blockage using a balloon catheter and deployed or expanded within the coronary artery. The stent is a permanent implant intended to keep the channel open. The most recent version, the drug eluting stents (DES) have one of approved formulations imbedded on the stent for the purpose of inhibiting restenosis of the stent and artery. Atherectomy is a means of using mechanical, laser or other techniques at the tip of a catheter to cut or grind away plaque.

CABG is an open chest procedure developed in the 1960s in which conduit vessels are taken from elsewhere in the body and grafted to the blocked coronary arteries so that blood can bypass the blockage. CABG typically requires the use of a heart-lung bypass machine to render the heart inactive (to allow the surgeon to operate on a still, relatively bloodless heart) and involves prolonged hospitalization and patient recovery periods. Accordingly, it is generally reserved for patients with severe cases of coronary artery disease or those who have previously failed to receive adequate relief of their symptoms from PTCA or related techniques. Many bypass grafts fail within one to fifteen years following the procedure. Repeating the surgery (re-do bypass surgery) is possible, but is made more difficult because of scar tissue and adhesions that typically form as a result of the first operation. Moreover, for many patients CABG is inadvisable for various reasons, such as the severity of the patient's overall condition, the extent of coronary artery disease or the small size of the blocked arteries.

When these treatment options are exhausted, the patient is left with no viable surgical or interventional alternative other than, in limited cases, heart transplantation. Without a viable surgical alternative, the patient is generally managed with drug therapy, often with significant lifestyle limitations. TMR, which bears the CE Marking and has received FDA approval, and PMC, which bears the CE Marking and for which we are

Table of Contents

continuing to pursue FDA approval for use in the U.S., offer potential relief to a large population of patients with advanced cardiovascular disease.

The TMR and PMC Procedures

TMR is a surgical procedure performed on the beating or non-beating heart, in which a laser device is used to create pathways through the myocardium directly into the heart chamber. The pathways are intended to supply blood to ischemic, or oxygen-deprived, regions of the myocardium and reduce angina in the patient. TMR can be performed using open chest surgery or minimally invasive surgery through a small incision between the ribs. TMR offers end-stage cardiac patients who have regions of ischemia not amenable to PTCA or CABG a means to alleviate their symptoms and improve their quality of life. We have received FDA approval for U.S. commercial distribution of our TMR laser system for treatment of stable patients with angina (Canadian Cardiovascular Society Class 4) refractory to medical treatment and secondary to objectively demonstrated coronary artery atherosclerosis and with a region of the myocardium with reversible ischemia not amenable to direct coronary revascularization.

PMC is an interventional procedure performed by a cardiologist. PMC is based upon the same principles as TMR, but the procedure is much less invasive. The procedure is performed under local anesthesia and the patient is treated through a catheter inserted in the femoral artery at the top of the leg. A laser transmitting catheter is threaded up into the heart chamber, where channels are created in the inner portion of the myocardium (i.e. heart muscle). PMC has received the CE Marking approving its use within the European Union. See our discussion below under the caption

Regulatory Status, for the status of our PMA application with the FDA seeking approval of PMC for public sale and use in the United States.

Business Strategy

Our objective is to become a recognized leader in the field of myocardial revascularization, with TMR and PMC established as well-known and acceptable therapies. Our strategies to achieve this goal are as follows:

Add Innovative New Technology to our Market Basket. Our focus is to add innovative new tools to help address advanced cardiovascular disease, and related co-morbidities of patients being referred today to cardiovascular surgery. We are committed to growing the TMR business with the Advanced TMR Plus platform which includes two new minimally invasive handpieces for thoracoscopic and robotic assisted TMR. These new products were developed with key clinical champions to expand the TMR market. We are also committed to identifying potential new products in the cardiovascular arena. These two new products are currently under IDE clinical study in support of the PMA applications with the FDA.

Expand Market for our Products. We are seeking to expand market awareness of our products among opinion leaders in the cardiovascular field, the referring physician community and the targeted patient population. We also currently intend to expand our marketing efforts in Europe and to the rest of the world through the establishment and expansion of direct international sales and support organizations and third party distributors and agents. In addition, we have developed a comprehensive training program to assist physicians in acquiring the expertise necessary to utilize our TMR and PMC products and procedures.

Demonstrate Clinical Utility of PMC. We are seeking to demonstrate the clinical safety and effectiveness of PMC. We have completed a pivotal clinical trial regarding PMC, and the study results were submitted to the FDA in a PMA application in December 1999, along with subsequent supplements. As discussed below under the caption Regulatory Status, the FDA Advisory Panel recommended against approval of PMC for public sale and use in the United States and further informed us that they believe the data submitted in August 2003 in connection with the interactive review process is still not adequate to support approval by the FDA of our PMC system. In August 2004, we met with the FDA and agreed on the steps needed to design and initiate a new clinical trial to confirm the safety and efficacy of PMC. In January 2005, we again met with the agency and agreed on

Table of Contents

major trial parameters. We came to agreement with the FDA on a final trial design and received formal FDA approval in January 2006. We are currently working to understand the specific direct and indirect costs and are initiating our pursuit of a corporate partner in the interventional cardiology arena. There can be no assurance, however, that we will receive a favorable determination from the FDA.

Leverage Proprietary Technology. We believe that our significant expertise in laser and catheter-based systems for cardiovascular disease and the proprietary technologies we have developed are important factors in our efforts to demonstrate the safety and effectiveness of our TMR and PMC procedures. We are seeking to develop additional proprietary technologies for TMR, PMC and related procedures. We have and maintain multiple U.S. and foreign patents and have multiple U.S. and foreign patent applications pending relating to various aspects of TMR, PMC and other cardiovascular related devices and therapies.

Products and Technology

TMR System

Our TMR system consists of a holmium laser console and a line of fiber-optic, laser-based surgical tools. Each surgical tool utilizes an optical fiber assembly to deliver laser energy from the source laser base unit to the distal tip of the surgical handpiece. The compact base unit occupies a small amount of operating room floor space, operates on standard 110-volt or 220-volt power supply, and is light enough to move within the operating room or among operating rooms in order to use operating room space efficiently. Moreover, the flexible fiberoptic assembly used to deliver the laser energy to the patient enables ready access to the patient and to various sites within the heart.

Our TMR system and related surgical procedures are designed to be used without the requirement of the external systems utilized with certain competitive TMR systems. Our TMR system does not require electrocardiogram synchronization, which monitors the electrical output of the heart and times the use of the laser to minimize electrical disruption of the heart, or transesophageal echocardiography, which tests (monitors) each application of the laser to the myocardium during the TMR procedure to determine if the pathway has penetrated through the myocardium into the heart chamber.

SolarGen 2100s laser system. SolarGen 2100s, approved in December 2004, generates 2.1 micron wavelength laser light by photoelectric excitation of a solid state holmium crystal. The holmium laser, because it uses a solid state crystal as its source, is compact, reliable and requires minimal maintenance. The systems specifications are as follows: size (21 L x 14 W x 36 H), weight (120 Lbs.), and power compatibility (115V and 230V for international customers).

TMR 2000 laser system. TMR 2000 generates 2.1 micron wavelength laser light by photoelectric excitation of a solid state holmium crystal. The holmium laser, because it uses a solid state crystal as its source, is compact, reliable and requires minimal maintenance. The systems specifications are as follows: size (35 L x 28.5 W x 45 H), weight (450 Lbs.), and power compatibility (230V).

SoloGrip III. The single use SoloGrip handpiece system contains multiple, fine fiber-optic strands in a one millimeter diameter bundle. The flexible fiber optic delivery system combined with the ergonomic handpiece provides access for treating all regions of the left ventricle. The SoloGrip III fiber-optic delivery system has an easy to install connector that screws into the laser base unit, and the device is pre-calibrated in the factory so it requires no special preparation.

PMC System

Our PMC system is currently sold only outside the United States. The PMC system consists of the PMC Laser and ECG Monitor.

PMC Laser. Our holmium laser base unit generates 2.1 micron wavelength laser light in the mid-infrared spectrum. It provides a reliable source for laser energy with low maintenance.

Table of Contents

Axcis Catheter System. Our Axcis catheter system is an over-the-wire system that consists of two components, the Axcis laser catheter and Axcis aligning catheter. Our Axcis catheter system is designed to provide controlled navigation and access to target regions of the left ventricle. The coaxial Axcis laser catheter system has an independent, extendible lens with radiopaque lens markers which show the location and orientation of the tip for optimal contact with the ventricle wall. The Axcis laser catheter also has nitinol petals at the laser-lens tip which are designed for safe penetration of the endocardium and to provide depth control. This delivery system consists of the Axcis laser catheter and a separate Ultra guide catheter.

New Product Pipeline

PEARL Robotic 5.0 and Thoracoscopic 8.0 Minimally Invasive Delivery Systems. The PEARL (Port Enabled Angina Relief using Laser) procedure is an advanced therapeutic technique for the treatment of chronic severe angina in patients who are not candidates for traditional revascularization. Both the PEARL Robotic 5.0 and Thoracoscopic 8.0 Minimally Invasive Delivery Systems have achieved CE Mark and Health Canada approval, and are part of an FDA approved IDE study that is underway to validate the safety and feasibility of these advanced delivery systems and the minimally invasive approach. The PEARL 5.0 handpiece utilizes a robotically assisted technique in an FDA approved trial of advanced laser delivery systems to provide the significant patient benefits of Holmium: YAG TMR via minimally invasive port access. The trial is a single arm consecutive series (open label) validation study of the advanced port access delivery system. The PEARL 8.0 handpiece utilizes a thoracoscopic technique in an FDA approved trial of advanced laser delivery systems to provide the significant patient benefits of Holmium: YAG TMR via minimally invasive port access. The trial is a single arm consecutive series (open label) validation study of the advanced port access delivery system.

Phoenix Revascularization Delivery System. This advanced delivery system combines the delivery of our Holmium: YAG TMR therapy with targeted and precise delivery of biologic or pharmacologic agents to optimize the overall physiologic and clinical response. The delivery of the pulsed Holmium: YAG energy through our proprietary fiberoptic delivery system stimulates the tissue surrounding the TMR channel with thermoacoustic energy. At the time of surgery, this initiates the body's own angiogenic response in and around the channels. It has been reported in the early clinical experience that delivery of biologics or pharmacologic materials to this stimulated myocardium can enhance the physiologic effect in tissue and contribute to improved regional and global ventricular mechanical function. We are currently supporting preliminary safety and feasibility trials outside the United States in support of the CE MARK approval process and any future regulatory initiatives.

Regulatory Status

United States. In February 1999, we received approval from the FDA for use of our TMR 2000 laser console and SoloGrip III handpiece for treatment of stable patients with angina (Canadian Cardiovascular Society Class 4) refractory to other medical treatments and secondary to objectively demonstrated coronary artery atherosclerosis and with a region of the myocardium with reversible ischemia not amenable to direct coronary revascularization.

We have completed pivotal clinical trials involving PMC, and study results were submitted to the FDA in a Pre Market Approval (PMA application) in December 1999 along with subsequent amendments. In July 2001, the FDA Advisory Panel recommended against approval of PMC for public sale and use in the United States. In February 2003, the FDA granted an independent panel review of our pending PMA application for PMC by the Medical Devices Dispute Resolution Panel (MDDRP). In July 2003, the FDA agreed to review additional data in support of our PMA supplement for PMC under the structure of an interactive review process between us and the FDA review team. The independent panel review by the MDDRP was cancelled in lieu of the interactive review, but the FDA has agreed to reschedule the MDDRP hearing in the future, if the dispute cannot be resolved. In August 2004, we met with the FDA and agreed on the steps needed to design and initiate a new clinical trial to confirm the safety and efficacy of PMC. In January 2005, we again met with the agency and agreed on major trial parameters. We came to agreement with the FDA on a final trial design and received formal FDA approval in January 2006. We are currently

Table of Contents

working to understand the specific direct and indirect costs and are initiating our pursuit of a corporate partner in the interventional cardiology arena. There can be no assurance, however, that we will receive a favorable determination from the FDA.

We have received approvals for our new PEARL Robotic and Thoracoscopic delivery systems from Health Canada and CE Mark approval for marketing to the participating European Union countries. In addition, the minimally invasive PEARL handpieces have been included in applications to the FDA and to other international health authorities, and we are currently working with these respective agencies toward approvals.

European Union. We have obtained approval to affix the CE Marking to substantially all of our products, which enables us to commercially distribute our TMR and PMC products throughout the European Community.

Sales and Marketing

We have received FDA approval for our surgical TMR laser system. In July 1999, the Centers for Medicare and Medicaid Services announced its coverage policy for TMR equipment and procedures. We are promoting market awareness of our approved surgical products among opinion leaders in the cardiovascular field and are recruiting physicians and hospitals to use our TMR products.

In the United States, we currently offer a TMR 2000 laser base unit at a current end user list price of \$355,000 per unit, a SolarGen 2100s laser system at a current end user list price of \$395,000, and the disposable TMR handpiece (at least one of which must be used with each TMR procedure) at an end user unit list price of \$3,995. In addition to sales of lasers to hospitals outright, in an effort to accelerate market adoption of the TMR procedure, we developed a program in which we loan lasers to hospitals in return for the hospital purchasing a minimum number of handpieces at a premium over the list price.

Internationally, we sell our TMR and PMC products through a direct sales and support organization and through distributors and agents. We currently intend to expand our marketing efforts in Europe and to the rest of the world through the establishment and expansion of direct international sales and support organizations and third party distributors and agents. We can not assure you, however, that we will be successful in increasing our international sales.

We have developed, in conjunction with several major hospitals using our TMR or PMC products, a training program to assist physicians in acquiring the expertise necessary to utilize our products and procedures. This program includes a comprehensive one-day course including didactic training and hands-on performance of TMR or PMC in vivo. To date over 1,500 cardiothoracic surgeons have been trained on the Cardiogenesis TMR system.

We exhibit our products at major meetings of cardiovascular medicine practitioners. Evaluators of our products have made presentations at meetings around the world, describing their results. Abstracts and articles have been published in peer-reviewed publications and industry journals to present the results of our clinical trials.

Research and Development

We believe that focusing our research efforts and product offerings is essential to our ability to stimulate growth and maintain our market leadership position. Our ongoing research and product development efforts are focused on the development of new and enhanced lasers and fiber-optic handpieces for TMR and PMC applications. In 2005, we initiated the IDE trials for the handpieces for our minimally invasive and robotic assisted TMR platforms. We also developed and validated our initial combination PHOENIX delivery system and initiated the preliminary safety and feasibility trials outside the United States.

We believe our future success will depend, in part, upon the success of our research and development programs. There can be no assurance that we will realize financial benefit from these efforts or that products or technologies developed by others will not render our products or technologies obsolete or non-competitive.

Table of Contents

Manufacturing

We outsource the manufacturing and assembly of our TMR and PMC handpiece systems to a single contract manufacturer. We also outsource the manufacturing of our SolarGen 2100s laser system to a different single contract manufacturer. The PMC laser system is provided to us under a manufacturing agreement with a laser manufacturing company.

Certain components of our laser units and fiber-optic handpieces are generally acquired from multiple sources. Other laser and fiber-optic components and subassemblies are purchased from single sources. Although we have identified alternative vendors, the qualification of additional or replacement vendors for certain components or services is a lengthy process. Any significant supply interruption would have a material adverse effect on the ability to manufacture our products and, therefore, would harm our business. We intend to continue to qualify multiple sources for components that are presently single sourced.

Competition

At this point in time, we believe our only direct competitor is PLC Systems, Inc. (PLC) which markets FDA-approved TMR products in the U.S. and abroad. Other competitors may also enter the market, including large companies in the laser and cardiac surgery markets. Many of these companies have or may have significantly greater financial, research and development, marketing and other resources than we do.

PLC is a publicly traded corporation which uses a CO(2) laser and an articulated mechanical arm in its TMR products. PLC obtained a Pre Market Approval for TMR in 1998. PLC has received the CE Marking, which allows sales of its products commercially in all European Union countries. PLC has been issued patents for its apparatus and methods for TMR. Edwards Lifesciences, a well known publicly traded provider of products and technologies to treat cardiovascular disease, has assumed full sales and marketing responsibility in the U.S. for PLC's TMR Heart Laser 2 System and associated kits pursuant to a co-marketing agreement between the two companies executed in January 2001. Through its significantly greater financial and human resources, including a well-established and extensive sales representative network, we believe Edwards has the potential to market to a greater number of hospitals and doctors than we currently can.

We believe that the factors which will be critical to maximizing our market development success include: the timing of receipt of requisite regulatory approvals, effectiveness and ease of use of the TMR products and applications, breadth of product line, system reliability, brand name recognition, effectiveness of distribution channels and cost of capital equipment and disposable devices.

TMR and PMC also compete with other methods for the treatment of cardiovascular disease, including drug therapy, PTCA, DES, PCI, and CABG. Even with the FDA approval of our TMR system in patients for whom other cardiovascular treatments are not likely to provide relief, and when used in conjunction with other treatments, we cannot assure you that our TMR or PMC products will be accepted by cardiovascular professionals. Moreover, technological advances in other therapies for cardiovascular disease such as pharmaceuticals or future innovations in cardiac surgery techniques could make such other therapies more effective or lower in cost than our TMR procedure and could render our technology obsolete. We cannot assure you that physicians will use our TMR procedure to replace or supplement established treatments, or that our TMR procedure will be competitive with current or future technologies. Such competition could harm our business.

Our TMR laser system and any other product developed by us that gains regulatory approval will face competition for market acceptance and market share. An important factor in such competition may be the timing of market introduction of competitive products. Accordingly, the relative pace at which we can develop products, complete clinical testing, achieve regulatory approval, gain reimbursement acceptance and supply commercial quantities of the product to the market are important competitive factors. In the event a competitor is able to obtain a PMA for its products prior to our doing so, we may not be able to compete successfully. We may not be able to compete successfully against current and future competitors even if we obtain a PMA prior to our competitors.

Table of Contents

Government Regulation

Laser-based surgical products and disposable fiber-optic accessories for the treatment of advanced cardiovascular disease through TMR are considered medical devices, and as such are subject to regulation in the U.S. by the FDA and outside the U.S. by comparable international regulatory agencies. Our devices require the rigorous PMA process for approval to market the product in the U.S. and must bear the CE Marking for commercial distribution in the European Community.

To obtain a Pre Market Approval (PMA) for a medical device, we must file a PMA application that includes clinical data and the results of preclinical and other testing sufficient to show that there is a reasonable assurance of safety and effectiveness of the product for its intended use. To begin a clinical study, an Investigational Device Exemption (IDE) must be obtained and the study must be conducted in accordance with FDA regulations. An IDE application must contain preclinical test data demonstrating the safety of the product for human investigational use, information on manufacturing processes and procedures, and proposed clinical protocols. If the FDA clears the IDE application, human clinical trials may begin. The results obtained from these trials are accumulated and, if satisfactory, are submitted to the FDA in support of a PMA application. Prior to U.S. commercial distribution, premarket approval is required from the FDA. In addition to the results of clinical trials, the PMA application must include other information relevant to the safety and effectiveness of the device, a description of the facilities and controls used in the manufacturing of the device, and proposed labeling. By law, the FDA has 180 days to review a PMA application. While the FDA has responded to PMA applications within the allotted time frame, reviews more often occur over a significantly longer period and may include requests for additional information or extensive additional trials. There can be no assurance that we will not be required to conduct additional trials which may result in substantial costs and delays, nor can there be any assurance that a PMA will be obtained for each product in a timely manner, if at all. In addition, changes in existing regulations or the adoption of new regulations or policies could prevent or delay regulatory approval of our products. Furthermore, even if a PMA is granted, subsequent modifications of the approved device or the manufacturing process may require a supplemental PMA or the submission of a new PMA which could require substantial additional clinical efficacy data and FDA review. After the FDA accepts a PMA application for filing, and after FDA review of the application, a public meeting is frequently held before an FDA advisory panel in which the PMA is reviewed and discussed. The panel then issues a favorable or unfavorable recommendation to the FDA or recommends approval with conditions. Although the FDA is not bound by the panel's recommendations, it tends to give such recommendations significant weight. In February 1999, we received a PMA for our TMR laser system for use in certain indications. As discussed above under the caption

Regulatory Status, the FDA Advisory Panel recommended against approval of PMC for public sale and use in the United States and further informed us that they believe the data submitted in August 2003 in connection with the interactive review process is still not adequate to support approval by the FDA of our PMC system. In August 2004, we met with the FDA and agreed on the steps needed to design and initiate a new clinical trial to confirm the safety and efficacy of PMC. We came to agreement with the FDA on a final trial design and received formal FDA approval in January 2006. We are currently working to understand the specific direct and indirect costs and are initiating our pursuit of a corporate partner in the interventional cardiology arena. There can be no assurance, however, that we will receive a favorable determination from the FDA.

Products manufactured or distributed by us pursuant to a PMA will be subject to pervasive and continuing regulation by the FDA, including, among other things, post market surveillance and adverse event reporting requirements. Failure to comply with applicable regulatory requirements can result in, among other things, warning letters, fines, suspensions or delays of approvals, seizures or recalls of products, operating restrictions or criminal prosecutions. The Federal Food, Drug and Cosmetic Act requires us to manufacture our products in registered establishments and in accordance with Good Manufacturing Practices (GMP) regulations and to list our devices with the FDA. Furthermore, as a condition to receipt of a PMA, our facilities, procedures and practices will be subject to additional pre-approval GMP inspections and thereafter to ongoing, periodic GMP inspections by the FDA. These GMP regulations impose certain procedural and documentation requirements upon us with respect to manufacturing and quality assurance activities. Labeling and promotional activities are subject to scrutiny by the FDA. Current FDA enforcement policy prohibits the

Table of Contents

marketing of approved medical devices for unapproved uses. Changes in existing regulatory requirements or adoption of new requirements could harm our business. We may be required to incur significant costs to comply with laws and regulations in the future and current or future laws and regulations may harm our business.

We are also regulated by the FDA under the Radiation Control for Health and Safety Act, which requires laser products to comply with performance standards, including design and operation requirements, and manufacturers to certify in product labeling and in reports to the FDA that our products comply with all such standards. The law also requires laser manufacturers to file new product and annual reports, maintain manufacturing, testing and sales records, and report product defects. Various warning labels must be affixed and certain protective devices installed, depending on the class of the product. In addition, we are subject to California regulations governing the manufacture of medical devices, including an annual licensing requirement. Our facilities are subject to ongoing, periodic inspections by the FDA and California regulatory authorities.

Sales, manufacturing and further development of our TMR and PMC systems also may be subject to additional federal regulations pertaining to export controls and environmental and worker protection, as well as to state and local health, safety and other regulations that vary by locality and which may require obtaining additional permits. We cannot predict the impact of these regulations on our business.

Sales of medical devices outside of the U.S. are subject to foreign regulatory requirements that vary widely by country. In addition, the FDA must approve the export of devices to certain countries. To market in Europe, a manufacturer must obtain the certifications necessary to affix to its products the CE Marking. The CE Marking is an international symbol of adherence to quality assurance standards and compliance with applicable European medical device directives. In order to obtain and to maintain a CE Marking, a manufacturer must be in compliance with appropriate ISO 9001 standards and obtain certification of its quality assurance systems by a recognized European Union notified body. However, certain individual countries within Europe require further approval by their national regulatory agencies. We have achieved International Standards Organization and European Union certification for our manufacturing facility. In addition, we have completed CE mark registration for all of our products in accordance with the implementation of various medical device directives in the European Union. Failure to maintain the right to affix the CE Marking or other requisite approvals could prohibit us from selling our TMR and PMC products in member countries of the European Union or elsewhere.

Intellectual Property Matters

Our success depends, in part, on our ability to obtain patent protection for our products, preserve our trade secrets, and operate without infringing the proprietary rights of others. Our policy is to seek to protect our proprietary position by, among other methods, filing U.S. and foreign patent applications related to our technology, inventions and improvements that are important to the development of our business. We have and maintain multiple U.S. and foreign patents and have multiple U.S. and foreign patent applications pending relating to various aspects of TMR, PMC and other cardiovascular related devices and therapies. Our patents or patent applications may be challenged, invalidated or circumvented in the future or the rights granted may not provide a competitive advantage. We intend to vigorously protect and defend our intellectual property. We do not know if patent protection will continue to be available for surgical methods in the future. Costly and time-consuming litigation brought by us may be necessary to enforce our patents and to protect our trade secrets and know-how, or to determine the enforceability, scope and validity of the proprietary rights of others.

We also rely upon trade secrets, technical know-how and continuing technological innovation to develop and maintain our competitive position. We typically require our employees, consultants and advisors to execute confidentiality and assignment of inventions agreements in connection with their employment, consulting, or advisory relationships with us. If any of these agreements are breached, we may not have adequate remedies available there under to protect our intellectual property or we may incur substantial expenses enforcing our rights. Furthermore, our competitors may independently develop substantially

Table of Contents

equivalent proprietary information and techniques or otherwise gain access to our proprietary technology, or we may not be able to meaningfully protect our rights in unpatented proprietary technology.

The medical device industry in general, and the industry segment that includes products for the treatment of cardiovascular disease in particular, have been characterized by substantial competition and litigation regarding patent and other intellectual property rights. In this regard, our competitors have been issued a number of patents related to TMR and PMC. There can be no assurance that claims or proceedings will not be initiated against us by competitors or other third parties in the future. In particular, the introduction in the United States market of our PMC technology, should that occur, may create new exposures to claims of infringement of third party patents. Any such claims in the future, regardless of whether they have merit, could be time-consuming and expensive to respond to and could divert the attention of our technical and management personnel. We may be involved in litigation to defend against claims of our infringement, to enforce our patents, or to protect our trade secrets. If any relevant claims of third party patents are upheld as valid and enforceable in any litigation or administrative proceeding, we could be prevented from practicing the subject matter claimed in such patents, or we could be required to obtain licenses from the patent owners of each such patent or to redesign our products or processes to avoid infringement.

We cannot assure that our current and potential competitors and other third parties have not filed or in the future will not file patent applications for, or have not received or in the future will not receive, patents or obtain additional proprietary rights that will prevent, limit or interfere with our ability to make, use or sell our products either in the U.S. or internationally. In the event we were to require licenses to patents issued to third parties, such licenses may not be available or, if available, may not be available on terms acceptable to us. In addition, we cannot assure you that we would be successful in any attempt to redesign our products or processes to avoid infringement or that any such redesign could be accomplished in a cost-effective manner. Accordingly, an adverse determination in a judicial or administrative proceeding or failure to obtain necessary licenses could prevent us from manufacturing and selling our products, which would harm our business.

Third Party Reimbursement

We expect that sales volumes and prices of our products will continue to depend significantly on the availability of reimbursement for surgical procedures using our products from third party payors such as governmental programs, private insurance and private health plans. Reimbursement is a significant factor considered by hospitals in determining whether to acquire new equipment. Reimbursement rates from third party payors vary depending on the third party payor, the procedure performed and other factors. Moreover, third party payors, including government programs, private insurance and private health plans, have in recent years been instituting increasing cost containment measures designed to limit payments made to healthcare providers by, among other measures, reducing reimbursement rates, limiting services covered, negotiating prospective or discounted contract pricing and carefully reviewing and increasingly challenging the prices charged for medical products and services.

Medicare reimburses hospitals on a prospectively determined fixed amount for the costs associated with an in-patient hospitalization based on the patient's discharge diagnosis, and reimburses physicians on a prospectively determined fixed amount based on the procedure performed, regardless of the actual costs incurred by the hospital or physician in furnishing the care and unrelated to the specific devices used in that procedure. Medicare and other third party payors are increasingly scrutinizing whether to cover new products and the level of reimbursement for covered products. In addition, Medicare traditionally has considered items or services involving devices that have not been approved or cleared for marketing by the FDA to be precluded from Medicare coverage. In July 1999, Centers for Medicare and Medicaid Services began coverage of FDA approved TMR systems for any manufacturer's TMR procedures. In October of 1999, CMS further clarified its coverage policy to include coverage of TMR when performed as an adjunctive to CABG.

In contrast to Medicare which covers a significant portion of the patients who are candidates for TMR, private insurers and health plans each make any individual decision whether or not to provide reimbursement for TMR and, if so, at what reimbursement level. We have limited experience to date ascertaining the acceptability of our TMR procedures for reimbursement by private insurance and private health plans. Private

Table of Contents

insurance and private health plans may not approve reimbursement for TMR or PMC. The lack of private insurance and health plans reimbursement may harm our business. Based on physician feedback, we believe many private insurers are reimbursing hospitals and physicians when the procedure is performed on non-Medicare patients. In May 2001, Blue Cross/ Blue Shield's Technology Evaluation Center (TEC) assessed our therapy and confirmed that both TMR and TMR used as an adjunct to bypass surgery, improves net health outcomes. While TEC decisions are not binding, many Blue Cross/ Blue Shield plans and other third-party payers use the center as a benchmark and adopt into policy those therapies that meet the TEC assessment.

In foreign markets, reimbursement is obtained from a variety of sources, including governmental authorities, private health insurance plans and labor unions. In most foreign countries, there are also private insurance systems that may offer payments for alternative therapies. Although not as prevalent as in the U.S., health maintenance organizations are emerging in certain European countries. We may need to seek international reimbursement approvals, and we may not be able to attain these approvals in a timely manner, if at all. Failure to receive foreign reimbursement approvals could make market acceptance of our products in the foreign markets in which such approvals are sought more difficult.

We believe that reimbursement in the future will be subject to increased restrictions such as those described above, both in the U.S. and in foreign markets. We also believe that the escalating cost of medical products and services has led to and will continue to lead to increased pressures on the healthcare industry, both foreign and domestic, to reduce the cost of products and services, including products offered by us. Third party reimbursement and coverage may not be available or adequate in U.S. or foreign markets, current levels of reimbursement may be decreased in the future and future legislation, regulation, or reimbursement policies of third party payors may reduce the demand for our products or our ability to sell our products on a profitable basis. Fundamental reforms in the healthcare industry in the U.S. and Europe that could affect the availability of third party reimbursement continue to be proposed, and we cannot predict the timing or effect of any such proposal. If third party payor coverage or reimbursement is unavailable or inadequate, our business may suffer.

Product Liability and Insurance

We maintain insurance against product liability claims in the amount of \$10 million per occurrence and \$10 million in the aggregate. We may not be able to obtain additional coverage or continue coverage in the amount desired or on terms acceptable to us, and such coverage may not be adequate for liabilities actually incurred. Any uninsured or underinsured claim brought against us or any claim or product recall that results in a significant cost to or adverse publicity against us could harm our business.

Employees

As of December 31, 2005 we had 35 employees, of which 19 employees were in sales and marketing. None of our employees are covered by a collective bargaining agreement and we have not experienced any work stoppages to date.

Table of Contents**Executive Officers**

Our executive officers as of June 30, 2006 were as follows:

Name	Age	Position
Michael J. Quinn(1)	62	President, Chief Executive Officer, and Director
William R. Abbott	49	Senior Vice President & Chief Financial Officer, Secretary and Treasurer
Larry J. Czapla(2)	58	Senior Vice President of Worldwide Sales and Business Development
Richard P. Lanigan	47	Senior Vice President of Operations
Henry R. Rossell, Jr	50	Senior Vice President, General Manager of Atlantic Business Unit
Charles J. Scarano	44	Senior Vice President of Worldwide Marketing
Gerard A. Arthur	48	Vice President, General Manager of Worldwide Services Division
John P. McIntyre	41	Vice President of Scientific and Regulatory Affairs
Joseph R. Kletzel, II(3)	56	Interim Chief Operating Officer and Director

(1) Mr. Quinn's employment was terminated by the Company on July 12, 2006.

(2) Mr. Czapla's employment was terminated by the Company on July 13, 2006.

(3) Effective July 12, 2006, Mr. Kletzel was appointed as Chairman of the Board and interim Chief Executive Officer.

Effective April 5, 2006, Christine G. Ocampo, the Company's Chief Financial Officer, Senior Vice President, Chief Accounting Officer and Secretary, resigned as an officer and employee of Cardiogenesis Corporation and therefore, she was not included in the table above.

For biographical information regarding Mr. Quinn and Mr. Kletzel, please refer to Part III, Item 10 of this Annual Report on Form 10-K which information is incorporated herein by this reference.

William R. Abbott joined us as Senior Vice President & Chief Financial Officer, Secretary and Treasurer in May 2006. From 1997-2005, Mr. Abbott, of Irvine, CA, served in several financial management positions at Newport Corporation most recently as Vice President of Finance and Treasurer. From 1993-1997, Mr. Abbott served as Vice President and Corporate Controller of Buena Park, CA based Amcor Sunclipse North America. From 1991-1992, Abbott served as Director of Financial Planning for the Western Division of Coca-Cola Enterprises, Inc. From 1988-1991, Abbott was Controller of McKesson Water Products Company. Prior to that, Abbott spent 6 years in management positions at PepsiCo, Inc. and began his career with PricewaterhouseCoopers, LLP. Mr. Abbott has a Bachelor of Science degree in accounting from Fairfield University in Fairfield, CT and a Masters in Business Administration degree from Pepperdine University.

Larry J. Czapla has served as our Senior Vice President of Worldwide Sales and Business Development since February 2006. Prior to joining Cardiogenesis, Mr. Czapla, was the Executive Vice President and General Manager of the Cardiology Division of Accellent in Minneapolis, MN. From 2003 to January 2005, Mr. Czapla was the Senior Vice President of Pemstar a global systems provider to the Medical, Computer and Communications Industries. From 2001 to 2003, Mr. Czapla was Vice President and General Manager of Perfusion Systems. He also served as Vice President Sales and held the role of Vice President E-Business and Business Excellence for Cardiac Surgery at Medtronic. From 1995 to 2000, Mr. Czapla was Director of Sales and Marketing with Phillips Medical Systems. Prior to 1995, Mr. Czapla worked with General Electric Medical Systems for over 10 years holding various management

positions in sales and marketing. Mr. Czapla attended Ohio State University where he studied Biomedical Engineering and Biochemistry and also attended West Virginia University where he graduated with a Bachelors Degree in Pre Medical Studies.

Table of Contents

Richard P. Lanigan has been our Senior Vice President of Operations since November 2005. Prior to November 2005, Mr. Lanigan served in a variety of different capacities. From November 2003 to October 2005, Mr. Lanigan was Senior Vice President of Marketing. From March 2001 to October 2003, Mr. Lanigan was Vice President of Government Affairs and Business Development. From March 2000 to March 2001, Mr. Lanigan served as Vice President of Sales and Marketing and from 1997 to 2000 he was the Director of Marketing. From 1992 to 1997, Mr. Lanigan served in various positions, most recently Marketing Manager, at Stryker Endoscopy. From 1987 to 1992, Mr. Lanigan served in Manufacturing and Operations management at Raychem Corporation. From 1981 to 1987, he served in the U.S. Navy where he completed six years of service as Lieutenant in the Supply Corps. Mr. Lanigan has a Bachelor of Arts in Finance from Notre Dame and a Masters degree in Systems Management from the University of Southern California.

Henry R. Rossell, Jr. has been our Senior Vice President, General Manager of the Atlantic Business Unit since January 2004. Prior to that, Mr. Rossell served as our Senior Vice President of Worldwide Sales and Marketing since January 2003. From 1999 to 2002, Mr. Rossell served as Senior Vice-President, Sales and Marketing, Surgical Products Division at Imagyn Medical Technologies, Inc. From 1998 to 1999, he served as Vice President of the Education Services Group at Medascend, Inc. From 1994 to 1998, Mr. Rossell served as Vice President of Sales at Deknatel Snowden-Pencer and at Genzyme Surgical Products following the acquisition of Deknatel by Genzyme. Prior to Genzyme, Mr. Rossell spent 17 years in several sales management positions at Baxter Healthcare International where his most recently held position was Area Vice President, Corporate Sales and Marketing. Mr. Rossell has a Bachelors of Arts in History from Duke University.

Charles J. Scarano joined Cardiogenesis in June 2004 as the Director of Marketing and became Vice President & General Manager of the International Business Unit in January 2005. He was promoted to Senior Vice President, Worldwide Marketing in November 2005. Prior to joining Cardiogenesis, Mr. Scarano served as Executive Vice President of OroPro, Inc., directing the business development, branding and strategic marketing efforts. Before OroPro he was Vice President of Marketing at Optimize, Inc. and prior to that he served as Vice President of Sales for Gabriel Medical. Prior to joining Gabriel Medical, Mr. Scarano spent several years with Stryker Endoscopy and Allergan Pharmaceuticals in sales and marketing management positions. Mr. Scarano received his B.A in Communications from Arizona State University.

Gerard A. Arthur has served as Vice President, General Manager of the Worldwide Service Division since December 2003. From 1993 to December 2003, Mr. Arthur was Director of Worldwide Service. Prior to Cardiogenesis, from 1991 to 1993, Mr. Arthur served as Service Manager at Intelligent Surgical Lasers, Inc. From 1990 to 1991, he served as Manager, Laser Services at National Instrument Service Corporation. From 1986 to 1990, he served as Service Manager, Medical Lasers at Carl Zeiss, Inc. Mr. Arthur has worked in the medical laser field for over twenty years. He is a graduate of the School of Marine Radio & Radar, Limerick, Ireland.

John P. McIntyre was promoted to the position of Vice President of R&D in March 2005 from the position of Director of Product Development & Quality. Mr. McIntyre has over 15 years experience in the medical device industry. Prior to joining Cardiogenesis, Mr. McIntyre worked in the Cardio Vascular and Vascular Divisions of Edwards Lifesciences Corporation (formerly Baxter Healthcare Corporation) and Innercool Therapies, Inc. in positions of increasing responsibility for both R&D Engineering and Regulatory Affairs. Mr. McIntyre received his B.S. in Bioengineering, graduating Magna Cum Laude from University of California-San Diego and his M.S. in Biomedical Engineering from University of California-Davis as a National Science Foundation Graduate Research Fellowship Stipend Winner.

Item 1A. Risk Factors

The following is a description of some of the principal risks inherent in our business. The risks and uncertainties described below are not the only ones facing us. Additional risks and uncertainties not presently known to us, or that we currently deem immaterial, could negatively impact our results of operations or financial condition in the future.

Table of Contents

Our ability to maintain current operations is dependent upon sustaining profitable operations or obtaining financing in the future.

We have incurred significant losses since inception. For example, for the fiscal years 2005, 2004 and 2003 we incurred net losses of \$1,857,000, \$1,319,000 and \$348,000 respectively. We will have a continuing need for new infusions of cash if we continue to incur losses in the future. We plan to increase our revenues through increased direct sales and marketing efforts on existing products and achieving regulatory approval for other products. If our direct sales and marketing efforts are unsuccessful or we are unable to achieve regulatory approval for our products, we will be unable to significantly increase our revenues. We believe that if we are unable to generate sufficient funds from sales or from debt or equity issuances to maintain our current expenditure rate, it will be necessary to significantly reduce our operations, including our sales and marketing efforts and research and development. If we are required to significantly reduce our operations, our business will be harmed.

Changes in our business, financial performance or the market for our products may require us to seek additional sources of financing, which could include short-term debt, long-term debt or equity. Although in the past we have been successful in obtaining financing, there is a risk that we may be unsuccessful in obtaining financing in the future on terms acceptable to us and that we will not have sufficient cash to fund our continued operations.

Our revenues and operating income may be constrained:

if commercial adoption of our TMR laser systems by healthcare providers in the United States declines;

until such time, if ever, as we obtain FDA and other regulatory approvals for our PMC laser systems; and

for an uncertain period of time after such approvals are obtained.

We may not be able to successfully market our products if third party reimbursement for the procedures performed with our products is not available for our health care provider customers.

Few individuals are able to pay directly for the costs associated with the use of our products. In the United States, hospitals, physicians and other healthcare providers that purchase medical devices generally rely on third party payors, such as Medicare, to reimburse all or part of the cost of the procedure in which the medical device is being used. Effective July 1, 1999, the Centers for Medicare and Medicaid Services (CMS), formerly the Health Care Financing Administration, commenced Medicare coverage for TMR procedures performed with FDA approved devices. Hospitals and physicians are eligible to receive Medicare reimbursement covering 100% of the costs for TMR procedures. If CMS were to materially reduce or terminate Medicare coverage of TMR procedures, our business and results of operation could be harmed.

In July 2004, CMS convened the Medicare Advisory Committee (MCAC) to review the clinical evidence regarding laser myocardial revascularization as a treatment option for Medicare patients. The MCAC meeting was a non-binding public hearing to consider the body of scientific evidence concerning the safety and efficacy of laser myocardial revascularization and to provide advice and recommendations to the CMS on clinical issues. The MCAC reviewed more than six years of clinical evidence on laser myocardial revascularization and heard testimony from a group of leading physicians regarding TMR. Subsequent to that public hearing, CMS has not initiated a pending National Coverage Determination relating to laser myocardial revascularization. In September 2004, we confirmed that CMS had no current intention to initiate any changes in the current national coverage decision and related memoranda regarding TMR.

As PMC has not been approved by the FDA, the CMS has not approved reimbursement for PMC. If we obtain FDA approval for PMC in the future and CMS does not provide reimbursement, our ability to successfully market and sell our PMC products may be affected.

Even though Medicare beneficiaries appear to account for a majority of all patients treated with the TMR procedure, the remaining patients are beneficiaries of private insurance and private health plans. We have

Table of Contents

limited experience to date with the acceptability of our TMR procedures for reimbursement by private insurance and private health plans. If private insurance and private health plans do not provide reimbursement, our business will suffer.

If we obtain the necessary foreign regulatory registrations or approvals for our products, market acceptance in international markets would be dependent, in part, upon the availability of reimbursement within prevailing healthcare payment systems. Reimbursement is a significant factor considered by hospitals in determining whether to acquire new equipment. A hospital is more inclined to purchase new equipment if third-party reimbursement can be obtained. Reimbursement and health care payment systems in international markets vary significantly by country. They include both government sponsored health care and private insurance. Although we expect to seek international reimbursement approvals, any such approvals may not be obtained in a timely manner, if at all. Failure to receive international reimbursement approvals could hurt market acceptance of our TMR and PMC products in the international markets in which such approvals are sought, which would significantly reduce international revenue.

We may fail to obtain required regulatory approvals in the United States to market our PMC laser system.

The FDA has not approved our PMC laser system for any application in the United States. In July 2001, the FDA Advisory Panel recommended against approval of PMC for public sale and use in the United States. In February 2003, the FDA granted an independent panel review of our pending PMA application for PMC by the Medical Devices Dispute Resolution Panel (MDDRP). In July 2003, the FDA agreed to review additional data in support of our PMA supplement for PMC under the structure of an interactive review process between us and the FDA review team. The independent panel review by the MDDRP was cancelled in lieu of the interactive review, but the FDA has agreed to reschedule the MDDRP hearing in the future, if the dispute cannot be resolved.

In August 2004, we met with the FDA and agreed on the steps needed to design and initiate a new clinical trial to confirm the safety and efficacy of PMC. In January 2005, we again met with the agency and agreed on major trial parameters. We came to agreement with the FDA on a final trial design and received formal FDA approval in January 2006. We are currently working to understand the specific direct and indirect costs and are initiating our pursuit of a corporate partner in the interventional cardiology arena. There can be no assurance, however, that we will receive a favorable determination from the FDA.

We will not be able to derive any revenue from the sale of our PMC system in the United States until such time, if any, that the FDA approves the device. Such inability to realize revenue from sales of our PMC device in the United States may have an adverse effect on our results of operations.

We may incur impairment charges on long-lived assets if future events indicate asset values may not be recoverable.

In January 1999, we entered into an agreement with PLC Systems, Inc., which granted us non-exclusive worldwide use of certain PLC patents. In return, we paid PLC a license fee totaling \$2,500,000 over a forty-month period. The present value of the payments of \$2,300,000 was recorded as an asset and is included in other assets. The PLC patents are valuable to our PMC product line. The PMC product line is not approved for sale in the United States but is sold internationally. If PMC product sales decline in the future, we may suffer an impairment of the asset's value.

We may fail to obtain required regulatory approvals in the United States to market our new minimally invasive and robotically assisted handpieces.

Both the PEARL Robotic 5.0 and Thoracoscopic 8.0 Minimally Invasive Delivery Systems have achieved CE Mark and Health Canada approval, and are part of an FDA approved IDE study that is underway to validate the safety and feasibility of these advanced delivery systems and the minimally invasive approach. The PEARL 5.0 handpiece utilizes a robotically assisted technique in an FDA approved trial of advanced laser delivery systems to provide the significant patient benefits of Holmium: YAG TMR via

Table of Contents

minimally invasive port access. The trial is a single arm consecutive series (open label) validation study of the advanced port access delivery system. The PEARL 8.0 handpiece utilizes a thoracoscopic technique in an FDA approved trial of advanced laser delivery systems to provide the significant patient benefits of Holmium: YAG TMR via minimally invasive port access. The trial is a single arm consecutive series (open label) validation study of the advanced port access delivery system. We will not be able to derive any revenue from the sale of our new minimally invasive and robotically assisted handpieces in the United States until such time, if any, that the FDA approves these devices. Such inability to realize revenue from sales of these devices in the United States may have an adverse effect on our results of operations.

In the future, the FDA could restrict the current uses of our TMR product and thereby restrict our ability to generate revenues.

We currently derive approximately 98% of our revenues from our TMR product. The FDA has approved this product for sale and use by physicians in the United States. At the request of the FDA, we are currently conducting post-market surveillance of our TMR product. If we should fail to meet the requirements mandated by the FDA or fail to complete our post-market surveillance study in an acceptable time period, the FDA could withdraw its approval for the sale and use of our TMR product by physicians in the United States. Additionally, although we are not aware of any safety concerns during our on-going post-market surveillance of our TMR product, if concerns over the safety of our TMR product were to arise, the FDA could possibly restrict the currently approved uses of our TMR product. In the future, if the FDA were to withdraw its approval or restrict the range of uses for which our TMR product can be used by physicians in the United States, such as restricting TMR's use with the coronary artery bypass grafting procedure, either outcome could lead to reduced or no sales of our TMR product in the United States and our business could be materially and adversely affected.

We must comply with FDA manufacturing standards or face fines or other penalties including suspension of production.

We are required to demonstrate compliance with the FDA's current good manufacturing practices regulations if we market devices in the United States or manufacture finished devices in the United States. The FDA inspects manufacturing facilities on a regular basis to determine compliance. If we fail to comply with applicable FDA or other regulatory requirements, we can be subject to:

fines, injunctions, and civil penalties;

recalls or seizures of products;

total or partial suspensions of production; and

criminal prosecutions.

The impact on us of any such failure to comply would depend on the impact of the remedy imposed on us.

We may fail to comply with international regulatory requirements and could be subject to regulatory delays, fines or other penalties.

Regulatory requirements in foreign countries for international sales of medical devices often vary from country to country. In addition, the FDA must approve the export of devices to certain countries. The occurrence and related impact of the following factors would harm our business:

delays in receipt of, or failure to receive, foreign regulatory approvals or clearances;

the loss of previously obtained approvals or clearances; or

the failure to comply with existing or future regulatory requirements.

To market in Europe, a manufacturer must obtain the certifications necessary to affix to its products the CE Marking. The CE Marking is an international symbol of adherence to quality assurance standards and

Table of Contents

compliance with applicable European medical device directives. In order to obtain and to maintain a CE Marking, a manufacturer must be in compliance with the appropriate quality assurance provisions of the International Standards Organization and obtain certification of its quality assurance systems by a recognized European Union notified body. However, certain individual countries within Europe require further approval by their national regulatory agencies.

We have completed CE Mark registration for all of our products in accordance with the implementation of various medical device directives in the European Union. Failure to maintain the right to affix the CE Marking or other requisite approvals could prohibit us from selling our products in member countries of the European Union or elsewhere. Any enforcement action by international regulatory authorities with respect to past or future regulatory noncompliance could cause our business to suffer. Noncompliance with international regulatory requirements could result in enforcement action such as prohibitions against us marketing our products in the European Union, which would significantly reduce international revenue.

We may not be able to meet future product demand on a timely basis and may be subject to delays and interruptions to product shipments because we depend on single source third party suppliers and manufacturers.

We purchase certain critical products and components for lasers and disposable handpieces from single sources. In addition, we are vulnerable to delays and interruptions, for reasons out of our control, because we outsource the manufacturing of our products to third parties. We may experience harm to our business if we cannot timely provide lasers to our customers or if our outsourcing suppliers have difficulties supplying our needs for products and components.

In addition, we do not have long-term supply contracts. As a result, our sources are not obligated to continue to provide these critical products or components to us. Although we have identified alternative suppliers and manufacturers, a lengthy process would be required to qualify them as additional or replacement suppliers or manufacturers. Also, it is possible some of our suppliers or manufacturers could have difficulty meeting our needs if demand for our TMR and PMC laser systems were to increase rapidly or significantly. We believe that we have an adequate supply of lasers to meet our expected demand for the next twelve months. However, if demand for our TMR laser is greater than we currently anticipate and there is a delay in obtaining production capacity, unless we are able to obtain lasers originally placed through our loaned laser program and no longer utilized by a hospital, we may not be able to meet the demand for our TMR laser. In addition, any defect or malfunction in the laser or other products provided by our suppliers and manufacturers could cause delays in regulatory approvals or adversely affect product acceptance. Further, we cannot predict:

if materials and products obtained from outside suppliers and manufacturers will always be available in adequate quantities to meet our future needs; or

whether replacement suppliers and/or manufacturers can be qualified on a timely basis if our current suppliers and/or manufacturers are unable to meet our needs for any reason.

Expansion of our business may put added pressure on our management and operational infrastructure affecting our ability to meet any increased demand for our products and possibly having an adverse effect on our operating results.

Since 2001 we have attempted to minimize our workforce, research and development expenses, and other operating expenses in effort to keep our cost structure more in line with our revenues. To the extent we are successful in expanding our business, such growth may place a significant strain on our limited personnel, management, financial systems and other resources. The evolving growth of our business presents numerous risks and challenges, including:

the dependence on the growth of the market for our TMR and PMC systems;

our ability to successfully and rapidly expand sales to potential customers in response to potentially increasing clinical adoption of the TMR procedure;

Table of Contents

the costs associated with such growth, which are difficult to quantify, but could be significant;

domestic and international regulatory developments;

rapid technological change;

the highly competitive nature of the medical devices industry; and

the risk of entering emerging markets in which we have limited or no direct experience.

To accommodate any such growth and compete effectively, we may need to obtain additional funding to improve information systems, procedures and controls and expand, train, motivate and manage our employees, and such funding may not be available in sufficient quantities, if at all. If we are not able to manage these activities and implement these strategies successfully to expand to meet any increased demand, our operating results could suffer.

Our operating results are expected to fluctuate and quarter-to-quarter comparisons of our results may not indicate future performance.

Our operating results have fluctuated significantly from quarter-to-quarter and are expected to continue to fluctuate significantly from quarter-to-quarter in future periods. We believe that quarter-to-quarter comparisons of our operating results are not a good indication of our future performance. Due to the emerging nature of the markets in which we compete, forecasting operating results is difficult and unreliable. It is likely or possible that our operating results for a future quarter will fall below the expectations of public market analysts that may cover our stock and investors. When this occurred in the past, the price of our common stock fell substantially, and if this occurs in the future, the price of our common stock may fall again, perhaps substantially.

Until May 2006, our stock was listed on the OTC Bulletin Board and is currently listed on the Pink Sheets which, in either case, may have an unfavorable impact on our stock price and liquidity.

Effective April 3, 2003 our common stock was delisted from The Nasdaq SmallCap Market and became quoted on the OTC Bulletin Board on the same day. In May of 2006, our common stock was delisted from the OTC Bulletin Board as a result of our failure to timely file our periodic reports. The Pink Sheets and the OTC Bulletin Board are significantly more limited markets in comparison to the Nasdaq SmallCap Market. The listing of our shares on the OTC Bulletin Board or the Pink Sheets will likely result in a significantly less liquid market available for existing and potential stockholders to trade shares of our common stock, could ultimately further depress the trading price of our common stock and could have a long-term adverse impact on our ability to raise capital in the future.

We expect to seek reinstatement of our common stock for trading on the OTC Bulletin Board in the near future. However, there can be no assurance that we will be able to successfully obtain or maintain such a listing. To the extent we are no able to obtain or maintain a listing on the OTC Bulletin Board, the liquidity and trading price of our common stock and our ability to raise capital in the future would be adversely affected.

The trading prices of many high technology companies, and in particular medical device companies, have been volatile which may result in large fluctuations in the price of our common stock.

The stock market has experienced significant price and volume fluctuations that have particularly affected the trading prices of equity securities of many high technology companies. These fluctuations have often been unrelated or disproportionate to the operating performance of many of these companies. Any negative change in the public's perception of medical device companies could depress our stock price regardless of our operating results.

Table of Contents

The price of our common stock may fluctuate significantly, which may result in losses for investors.

The market price of our common stock has been and may continue to be volatile. For example, during the 52-week period ended June 30, 2006, the closing prices of our common stock as reported on the OTC Bulletin Board or Pink Sheets ranged from a high of \$0.65 per share to a low of \$0.25 per share. We expect our stock price to be subject to fluctuations as a result of a variety of factors, including factors beyond our control. These factors include:

actual or anticipated variations in our quarterly operating results;

the timing and amount of conversions and subsequent sales of common stock issuable upon conversion of outstanding convertible promissory notes and warrants;

announcements of technological innovations or new products or services by us or our competitors;

announcements relating to strategic relationships or acquisitions;

additions or terminations of coverage of our common stock by securities analysts;

statements by securities analysts regarding us or our industry;

conditions or trends in the medical device industry;

the lack of liquidity in the market for our common stock; and

changes in the economic performance and/or market valuations of other medical device companies.

The prices at which our common stock trades will affect our ability to raise capital, which may have an adverse affect on our ability to fund our operations.

We face competition from products of our competitors which could limit market acceptance of our products and render our products obsolete.

The market for TMR laser systems is competitive. We currently compete with PLC Systems, a publicly traded company which uses a CO(2) laser and an articulated mechanical arm in its TMR products. Edwards Lifesciences, a well known, publicly traded provider of products and technologies to treat cardiovascular disease, has assumed full sales and marketing responsibility in the U.S. for PLC's TMR Heart Laser 2 System and associated kits pursuant to a co-marketing agreement between the two companies executed in January 2001. Through its significantly greater financial and human resources, including a well-established and extensive sales representative network, we believe Edwards has the potential to market to a greater number of hospitals and doctors that we currently can. If PLC, or any new competitor, is more effective than we are in developing new products and procedures and marketing existing and future products similar to ours, our business may suffer.

The market for TMR laser systems is characterized by rapid technical innovation. Our current or future competitors may succeed in developing TMR products or procedures that:

are more effective than our products;

are more effectively marketed than our products; or

may render our products or technology obsolete.

If we obtain the FDA's approval for our PMC laser system, we will face competition for market acceptance and market share for that product. Our ability to compete may depend in significant part on the timing of introduction of competitive products into the market, and will be affected by the pace, relative to competitors, at which we are able to:

develop products;

complete clinical testing and regulatory approval processes;

Table of Contents

obtain third party reimbursement acceptance; and

supply adequate quantities of the product to the market.

Third party intellectual property rights may limit the development and protection of our intellectual property, which could adversely affect our competitive position.

Our success is dependent in large part on our ability to:

obtain patent protection for our products and processes;

preserve our trade secrets and proprietary technology; and

operate without infringing upon the patents or proprietary rights of third parties.

The medical device industry has been characterized by extensive litigation regarding patents and other intellectual property rights. Companies in the medical device industry have employed intellectual property litigation to gain a competitive advantage. Certain competitors and potential competitors of ours have obtained United States patents covering technology that could be used for certain TMR and PMC procedures. We do not know if such competitors, potential competitors or others have filed and hold international patents covering other TMR or PMC technology. In addition, international patents may not be interpreted the same as any counterpart United States patents.

While we periodically review the scope of our patents and other relevant patents of which we are aware, the question of patent infringement involves complex legal and factual issues. Any conclusion regarding infringement may not be consistent with the resolution of any such issues by a court.

Costly litigation may be necessary to protect intellectual property rights.

We may have to engage in time consuming and costly litigation to protect our intellectual property rights or to determine the proprietary rights of others. In addition, we may become subject to patent infringement claims or litigation, or interference proceedings declared by the United States Patent and Trademark Office to determine the priority of inventions.

Defending and prosecuting intellectual property suits, United States Patent and Trademark Office interference proceedings and related legal and administrative proceedings are both costly and time-consuming. We may be required to litigate further to:

enforce our issued patents;

protect our trade secrets or know-how; or

determine the enforceability, scope and validity of the proprietary rights of others.

Any litigation or interference proceedings will result in substantial expense and significant diversion of effort by technical and management personnel. If the results of such litigation or interference proceedings are adverse to us, then the results may:

subject us to significant liabilities to third parties;

require us to seek licenses from third parties;

prevent us from selling our products in certain markets or at all; or

require us to modify our products.

Although patent and intellectual property disputes regarding medical devices are often settled through licensing and similar arrangements, costs associated with such arrangements may be substantial and could include ongoing royalties. Furthermore, we may not be able to obtain the necessary licenses on satisfactory terms, if at all.

Table of Contents

Adverse determinations in a judicial or administrative proceeding or failure to obtain necessary licenses could prevent us from manufacturing and selling our products. This would harm our business.

The United States patent laws have been amended to exempt physicians, other health care professionals, and affiliated entities from infringement liability for medical and surgical procedures performed on patients. We are not able to predict if this exemption will materially affect our ability to protect our proprietary methods and procedures.

We rely on patent and trade secret laws, which are complex and may be difficult to enforce.

The validity and breadth of claims in medical technology patents involve complex legal and factual questions and, therefore, may be highly uncertain. Issued patent or patents based on pending patent applications or any future patent application may not exclude competitors or may not provide a competitive advantage to us. In addition, patents issued or licensed to us may not be held valid if subsequently challenged and others may claim rights in or ownership of such patents.

Furthermore, we cannot assure you that our competitors:
have not developed or will not develop similar products;

will not duplicate our products; or

will not design around any patents issued to or licensed by us.

Because patent applications in the United States were historically maintained in secrecy until the patents are issued, we cannot be certain that:

others did not first file applications for inventions covered by our pending patent applications; or

we will not infringe any patents that may issue to others on such applications.

We may suffer losses from product liability claims if our products cause harm to patients.

We are exposed to potential product liability claims and product recalls. These risks are inherent in the design, development, manufacture and marketing of medical devices. We could be subject to product liability claims if the use of our TMR or PMC laser systems is alleged to have caused adverse effects on a patient or such products are believed to be defective. Our products are designed to be used in life-threatening situations where there is a high risk of serious injury or death. We are not aware of any material side effects or adverse events arising from the use of our TMR product. Though we are in the process of responding to the FDA's Circulatory Devices Panel's recent recommendation against approval of our PMC product because of concerns over the safety of the device and the data regarding adverse events in the clinical trials, we believe there are no material side effects or adverse events arising from the use of our PMC product. When being clinically investigated, it is not uncommon for new surgical or interventional procedures to result in a higher rate of complications in the treated population of patients as opposed to those reported in the control group. In light of this, we believe that the difference in the rates of complications between the treated groups and the control groups in the clinical trials for our PMC product are not statistically significant, which is why we believe that there are no material side effects or material adverse events arising from the use of our PMC product.

Any regulatory clearance for commercial sale of these products will not remove these risks. Any failure to comply with the FDA's good manufacturing practices or other regulations could hurt our ability to defend against product liability lawsuits.

Our insurance may be insufficient to cover product liability claims against us.

Our product liability insurance may not be adequate for any future product liability problems or continue to be available on commercially reasonable terms, or at all.

Table of Contents

If we were held liable for a product liability claim or series of claims in excess of our insurance coverage, such liability could harm our business and financial condition. We maintain insurance against product liability claims in the amount of \$10 million per occurrence and \$10 million in the aggregate.

We may require increased product liability coverage as sales of approved products increase and as additional products are commercialized. Product liability insurance is expensive and in the future may not be available on acceptable terms, if at all.

Our financial condition and/or results of operations may be adversely affected as a result of claims made by our former Chief Executive Officer.

On July 12, 2006, we terminated Michael Quinn as our Chairman, Chief Executive Officer and President in accordance with the terms of his employment agreement. Mr. Quinn has subsequently alleged wrongful termination and a breach of his employment agreement and has indicated that he believes he is entitled to monetary damages in excess of \$4,750,000 plus other, non-economic damages, including punitive damages. As of August 18, 2006, we had not been informed of the initiation of any formal legal proceedings. To the extent Mr. Quinn initiates legal proceedings our results of operations and financial condition could be adversely affected by the costs and management time and resources required to defend such action. In addition, although we believe Mr. Quinn's claims are without merit, to the extent that Mr. Quinn prevails in any legal proceeding, the payment of any judgment could adversely affect our financial condition and results of operations.

We depend heavily on key personnel and turnover of key employees and senior management could harm our business.

Our future business and results of operations depend in significant part upon the continued contributions of our key technical and senior management personnel. They also depend in significant part upon our ability to attract and retain additional qualified management, technical, marketing and sales and support personnel for our operations. If we lose a key employee or if a key employee fails to perform in his or her current position, or if we are not able to attract and retain skilled employees as needed, our business could suffer. Significant turnover in our senior management could significantly deplete our institutional knowledge held by our existing senior management team and could impair our ability to effectively operate and grow our business. For example, in April 2005, Christine Ocampo, our former Chief Financial Officer, resigned, and in July 2006 we terminated the employment of Michael Quinn, our former Chief Executive Officer, President and Chairman of the Board. We depend on the skills and abilities of our key management level employees in managing the manufacturing, technical, marketing and sales aspects of our business, any part of which could be harmed by further turnover. To the extent we are unable to identify or retain a suitable management personnel, our business and prospects could be adversely affected.

We sell our products internationally which subjects us to specific risks of transacting business in foreign countries.

In future quarters, international sales may become a significant portion of our revenue if our products become more widely used outside of the United States. Our international revenue is subject to the following risks, the occurrence of any of which could harm our business:

foreign currency fluctuations;

economic or political instability;

foreign tax laws;

shipping delays;

various tariffs and trade regulations;

restrictions and foreign medical regulations;

Table of Contents

customs duties, export quotas or other trade restrictions; and

difficulty in protecting intellectual property rights.

If an Event of Default Occurs Under the Convertible Note Issued to Laurus, It Could Seriously Harm Our Operations.

On October 26, 2004, we issued a \$6,000,000 secured convertible term note to Laurus, of which \$1,665,000 remained outstanding as of June 30, 2006. Pursuant to the terms of the note, an event of default includes a suspension of trading of our common stock on the OTC Bulletin Board which remains uncured within thirty (30) days of notice of the suspension. To the extent that the delisting of our stock in May 2006 is deemed a suspension of trading, the Company could be deemed to be in default of its obligations under the note. If an event of default occurs under the note, interest on the note would accrue at the default rate which is the then current prime rate plus 12% per annum until the default is cured. In addition, the holder of the note will have the right to accelerate and declare it immediately due and payable and exercise its rights as a secured creditor under applicable law and the security agreement with us, including the right to foreclose upon our assets that secure the note, which constitute substantially all of our assets.

In addition to the requirements that we maintain our listing on the OTC Bulletin Board, the note and related agreements contain numerous events of default which include:

A failure to pay interest and principal payments when due;

a breach by us of any material covenant or term or condition of the note or any agreement made in connection therewith;

a breach by us of any material representation or warranty made in the note or in any agreement made in connection therewith;

if we make an assignment for the benefit of our creditors, or a receiver or trustee is appointed for us;

any form of bankruptcy or insolvency proceeding is instituted by or against us and is not dismissed within 60 days;

any money judgment entered or filed against us for more than \$50,000 and remains unresolved for 30 days;

our failure to timely deliver shares of common stock when due upon conversions of the note;

we experience an event of default under any other debt obligations; and

we experience a loss, damage or encumbrance upon collateral securing the Laurus debt which is valued at more than \$100,000 and is not timely mitigated.

If we default on the note and the holder demands all payments due and payable, the cash required to pay such amounts would most likely come out of working capital and non current assets, which may not be sufficient to repay the amounts due. In addition, since we rely on our working capital for our day to day operations, such a default on the note could materially adversely affect our business, operating results or financial condition to such extent that we are forced to restructure, file for bankruptcy, sell assets or cease operations. Further, our obligations under the note are secured by all of our assets. Failure to fulfill our obligations under the note and related agreements could lead to loss of these assets, which would be detrimental to our operations.

We may continue to incur significant non-operating, non-cash charges resulting from changes in the fair value of warrants and derivatives.

In October 2004, we entered into a Secured Convertible Term Note agreement with Laurus Funds. Pursuant to the Note agreement, a warrant totaling 2.6 million was issued to Laurus. This warrant, along with multiple embedded derivatives in the agreement, have been recorded at their relative fair value at the inception date of the agreement,

October 27, 2004, and will continue to be recorded at fair value at each

23

Table of Contents

subsequent balance sheet date. Any change in value between reporting periods will be recorded as a non-operating, non-cash charge at each reporting date. The impact of these non-operating, non-cash charges could have an adverse effect on our stock price in the future.

The fair value of the warrant and derivatives is tied in large part to our stock price. If our stock price increases between reporting periods, the warrant and derivatives become more valuable. As such, there is no way to forecast what the non-operating, non-cash charges will be in the future or what the future impact will be on our financial statements.

The restrictions on our activities contained in the Laurus financing documents could negatively impact our ability to obtain financing from other sources.

The Laurus financing documents restrict us from obtaining additional debt financing, subject to certain specified exceptions. To the extent that Laurus declined to approve a debt financing that does not otherwise qualify for an exception to the consent requirement, we would be unable to obtain such debt financing. In addition, subject to certain exceptions, we have granted to Laurus a right of first refusal to provide additional financing to us in the event that we propose to engage in additional debt financing or to sell any of our equity securities. Laurus's right of first refusal could act as a deterrent to third parties which may be interested in providing us with debt financing or purchasing our equity securities. To the extent that such a financing is required for us to conduct our operations, these restrictions could materially adversely impact our ability to achieve our operational objectives.

Low market prices for our common stock would result in greater dilution to our shareholders, and could negatively impact our ability to convert the Laurus debt into equity

The market price of our common stock significantly impacts the extent to which we are permitted to convert the unrestricted and restricted portions of the Laurus debt into shares of our common stock. The lower the market price of our common stock as of the respective times of conversion, the more shares we will need to issue to Laurus to convert the principal and interest payments then due on the unrestricted portion of the debt. If the market price of our common stock falls below certain thresholds, we will be unable to convert any such repayments of principal and interest into equity, and we will be forced to make such repayments in cash, which we currently forecast will be required to sustain our operations. Our operations could be materially adversely impacted if we are forced to make repeated cash payments on the unrestricted portion of the Laurus debt. Further, prior to the full repayment of the unrestricted portion of the Laurus debt, we will only be able to require conversions of the \$3,000,000 restricted cash amount to the extent the market price of our common stock exceeds certain levels. To the extent that the market price of our common stock does not reach such specified levels, we will be not be entitled to take possession of any of the restricted cash during the term of the Laurus note. The restricted portion of the debt will continue to accrue interest during the entire period that we are unable to require conversion. In addition, to the extent that conversions of the restricted portion of the debt are not effected during the term of the note, we have only a limited ability to convert a specified amount of the restricted debt (subject to meeting certain minimum market price thresholds and volume requirements), and we will be required to repay the remaining restricted principal and interest in cash. In May 2006, the Company repaid \$2,417,000 of the Note's outstanding principal amount out of the restricted cash account created for the benefit of Laurus and the Company and related interest of \$314,000. In connection with the repayment, the Company was required to pay a prepayment penalty of \$483,000 out of the Company's unrestricted cash. Therefore, the risks associated to the restricted debt are no longer applicable.

Future sales of our common stock could lower our stock price.

The sale of our common stock by the holders of the Laurus debt upon conversion of all or any portion of the Laurus debt could cause the market price of our common stock to decline. In addition, if our shareholders sell substantial amounts of our common stock, including shares issuable upon exercise of options or warrants or shares issued in previous financings, in the public market, the market price of our common stock could decline. If these sales were to occur, we may also find it more difficult to sell equity or equity-related securities in the future at a time and price that we deem appropriate and desirable.

Table of Contents

In the future, we may issue additional shares in public or private offerings. We cannot predict the size of future issuances of our common stock or the effect, if any, that future issuances and sales of our common stock would have on the market price of our common stock. We expect that Laurus will generally promptly sell any shares into which the Laurus indebtedness is converted, and that the market price of our common stock could decline as a result of such sales.

Provisions of our certificate of incorporation as well as our rights agreement could discourage potential acquisition proposals and could deter or prevent a change of control.

Our articles of incorporation authorize our board of directors, subject to any limitations prescribed by law, to issue shares of preferred stock in one or more series without shareholder approval. On August 17, 2001 we adopted a shareholder rights plan, as amended, and under the rights plan, our board of directors declared a dividend distribution of one right for each outstanding share of common stock to shareholders of record at the close of business on August 30, 2001. Pursuant to the Rights Agreement, in the event (a) any person or group acquires 15% or more of our then outstanding shares of voting stock (or 21% or more of our then outstanding shares of voting stock in the case of State of Wisconsin Investment Board), (b) a tender offer or exchange offer is commenced that would result in a person or group acquiring 15% or more of our then outstanding voting stock, (c) we are acquired in a merger or other business combination in which we are not the surviving corporation or (d) 50% or more of our consolidated assets or earning power are sold, then the holders of our common stock are entitled to exercise the rights under the Rights Plan, which include, based on the type of event which has occurred, (i) rights to purchase preferred shares from us, (ii) rights to purchase common shares from us having a value twice that of the underlying exercise price, and (iii) rights to acquire common stock of the surviving corporation or purchaser having a market value of twice that of the exercise price. The rights expire on August 17, 2011, and may be redeemed prior thereto at \$0.001 per right under certain circumstances. The Board's ability to issue preferred stock without shareholder approval while providing desirable flexibility in connection with financings, acquisitions and other corporate purposes, and the existence of the rights plan might discourage, delay or prevent a change in the ownership of our company or a change in our management. In addition, these provisions could limit the price that investors would be willing to pay in the future for shares of our common stock.

Changes in, or interpretations of, accounting rules and regulations could result in unfavorable accounting charges.

We prepare our consolidated financial statements in conformity with generally accepted accounting principles. These principles are subject to interpretation by the SEC and various bodies formed to interpret and create appropriate accounting policies. A change in these policies can have a significant effect on our reported results and may even retroactively affect previously reported transactions. To the extent that such interpretations or changes in policies negatively impact our reported financial results, our results of stock price could be adversely affected.

Recent rulemaking by the Financial Accounting Standards Board will require us to expense equity compensation given to our employees and could significantly harm our operating results and may reduce our ability to effectively utilize equity compensation to attract and retain employees.

We historically have used stock options as a component of our employee compensation program in order to align employees' interests with the interests of our stockholders, encourage employee retention, and provide competitive compensation packages. The Financial Accounting Standards Board has adopted changes that will require companies to record a charge to earnings for employee stock option grants and other equity incentives beginning in the first quarter ending March 31, 2006. This accounting change will reduce our reported earnings and may require us to reduce the availability and amount of equity incentives provided to employees, which may make it more difficult for us to attract, retain and motivate key personnel. Each of these results could materially and adversely affect our business.

Table of Contents

We currently do not have adequate internal controls over financial reporting as noted in Item 9A. Controls and Procedures and we are exposed to risks from recent legislation requiring companies to evaluate those internal controls.

Section 404 of the Sarbanes-Oxley Act of 2002 requires our management to report on, and will require our independent registered public accounting firm to attest to, the effectiveness of our internal control structure and procedures for financial reporting. We are developing a program to perform the system and process evaluation and testing necessary to comply with these requirements on a sustained basis. Companies do not have significant experience in complying with these requirements on an ongoing and sustained basis. As a result, we expect to continue to incur increased expense and to devote management resources to Section 404 compliance. As noted in Item 9A. Controls and Procedures, the Chief Executive Officer and Chief Financial Officer concluded that, as of the end of the period covered by this report, our disclosure controls and procedures were not effective due to a material weakness. If the material weakness is not remediated, investor perceptions of Cardiogenesis may be adversely affected and could cause a decline in the market price of our stock.

Item 1B. *Unresolved Staff Comments.*

None.

Item 2. *Properties.*

Our headquarters, located in Foothill Ranch, California, are comprised of 12,533 square feet of leased space. The lease expires in October 2006. We believe our facilities are adequate to meet our foreseeable requirements. There can be no assurance that additional facilities will be available to us on favorable terms, if and when needed, thereafter.

Item 3. *Legal Proceedings.*

On July 12, 2006, we terminated Michael Quinn as our Chairman, Chief Executive Officer and President in accordance with the terms of his employment agreement. At the time of termination, Mr. Quinn stated that he intended to bring claims against us relating to his termination, including claims for payment of severance he claimed is owed to him under the terms of his employment agreement. On July 18, 2006, we received correspondence from Mr. Quinn's counsel alleging wrongful termination and breach of Mr. Quinn's employment agreement and indicating that Mr. Quinn is entitled to monetary damages in excess of \$4,750,000 plus other, non-economic damages, including punitive damages. As of August 18, 2006, we had not been informed of the initiation of any formal legal proceedings. The Company believes that Mr. Quinn's claims are without merit and intends to vigorously defend any actions brought by Mr. Quinn.

Item 4. *Submission of Matters to a Vote of Security Holders.*

None.

PART II

Item 5. *Market for Registrants Common Equity, Related Shareholder Matters and Issuer Purchases of Equity Securities.*

Our common stock was traded on the OTC Bulletin Board under the symbol CGCP.OB until May 31, 2006. As we previously disclosed, trading of our common stock on the OTC Bulletin Board was suspended due to our failure to timely file required periodic reports. Our common stock is currently quoted on the Pink Sheets under the symbol CGCP.PK.

Table of Contents

For the periods indicated, the following table presents the range of high and low sale prices for the common stock as reported by the OTC Bulletin Board and Pink Sheets for the respective market on which our common stock was listed during the quarter being reported.

2004	High	Low
First Quarter	\$ 1.40	\$ 0.59
Second Quarter	\$ 0.87	\$ 0.44
Third Quarter	\$ 0.75	\$ 0.47
Fourth Quarter	\$ 0.70	\$ 0.35
2005	High	Low
First Quarter	\$ 0.79	\$ 0.48
Second Quarter	\$ 0.64	\$ 0.38
Third Quarter	\$ 0.68	\$ 0.44
Fourth Quarter	\$ 0.51	\$ 0.32

As of June 30, 2006, shares of our common stock were held by 230 shareholders of record.

We have never paid a cash dividend on our common stock and do not anticipate paying any cash dividends in the foreseeable future, as we intend to retain our earnings, if any, for general corporate purposes. Moreover, certain restrictions contained in the terms of our financing transaction with Laurus (described below) prohibit us from paying dividends or redeeming shares while the obligations to Laurus remain outstanding.

From October 1 through December 31, 2005, Laurus converted an aggregate of \$246,000 of principal and interest under the Note into an aggregate of 604,000 shares of Cardiogenesis common stock at conversion prices ranging from \$0.39 to \$0.43 per share. The issuance of shares upon conversion was made in reliance upon Section 4(2) of the Securities Act of 1933, as amended.

Securities Authorized for Issuance Under Equity Compensation Plans

See Item 12 of Part III of this Annual Report on Form 10-K for certain information relating to securities issued under our equity compensation plans. Such information is incorporated herein by this reference.

Item 6. Selected Consolidated Financial Data.

The following selected consolidated statement of operations data for fiscal years ended 2005, 2004 and 2003 and the consolidated balance sheet data for 2005 and 2004 set forth below are derived from our consolidated financial statements and are qualified by reference to our consolidated financial statements included herein.

The selected consolidated statement of operations data for fiscal year ended 2002 and 2001 and the consolidated balance sheet data for 2003, 2002 and 2001 have been derived from our audited consolidated financial statements not included herein. These historical results are not necessarily indicative of the results of operations to be expected for any future period.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

Management's Discussion and Analysis of Financial Condition and Results of Operations contains certain statements relating to future results, which are forward-looking statements as that term is defined in the Private Securities Litigation Reform Act of 1995. Forward-looking statements are identified by words such as "believes," "anticipates," "expects," "intends," "plans," "will," "may" and similar expressions. In addition, any statements that refer to "plans, expectations, strategies or other characterizations of future events or circumstances" are forward-looking statements. These forward-looking statements are based on the beliefs of management, as well as assumptions and estimates based on information available to us as of the dates such assumptions and estimates are made, and are subject to certain risks and uncertainties that could cause actual results to differ materially from historical results or those anticipated, depending on a variety of factors, including those factors discussed under Item 1A, "Risk Factors." Should one or more of those risks or uncertainties materialize adversely, or should underlying assumptions or

estimates prove incorrect, actual results may vary materially from those described. Those events and uncertainties are difficult or impossible to predict accurately and many are beyond our control. Except as may be required by applicable law, we assume no obligation to publicly release the result of any revisions that may be made to any forward-looking statements to reflect events or circumstances after the date of such statements or to reflect the occurrence of anticipated or unanticipated events. Our business may have changed since the date hereof and we undertake no obligation to update these forward looking statements. The following discussion should be read in conjunction with financial statements and notes thereto included in this Annual Report on Form 10-K.

Table of Contents**Overview**

Cardiogenesis Corporation incorporated in California in 1989, designs, develops and distributes laser-based surgical products and disposable fiber-optic accessories for the treatment of advanced cardiovascular disease through transmyocardial revascularization (TMR) and percutaneous myocardial channeling (PMC). PMC was formerly referred to as percutaneous myocardial revascularization (PMR). The new name PMC more literally depicts the immediate physiologic tissue effect of the Cardiogenesis PMC system to ablate precise, partial thickness channels into the heart muscle from the inside of the left ventricle.

In February 1999, we received final approval from the FDA for our TMR products for certain indications, and we are permitted to sell those products in the U.S. on a commercial basis. We have also received the European Conforming Mark (CE Mark) allowing the commercial sale of our TMR laser systems and our PMC catheter system to customers in the European Community. Effective July 1999, the Centers for Medicare and Medicaid Services (CMS) began providing Medicare coverage for TMR. As a result, hospitals and physicians are now eligible to receive Medicare reimbursement for TMR equipment and procedures performed on Medicare recipients.

We have completed pivotal clinical trials involving PMC, and study results were submitted to the FDA in a Pre Market Approval (PMA application) in December 1999 along with subsequent amendments. In July 2001, the FDA Advisory Panel recommended against approval of PMC for public sale and use in the United States. In February 2003, the FDA granted an independent panel review of our pending PMA application for PMC by the Medical Devices Dispute Resolution Panel (MDDRP). In July 2003, the FDA agreed to review additional data in support of our PMA supplement for PMC under the structure of an interactive review process between us and the FDA review team. The independent panel review by the MDDRP was cancelled in lieu of the interactive review, but the FDA has agreed to reschedule the MDDRP hearing in the future, if the dispute cannot be resolved. In August 2004, we met with the FDA and agreed on the steps needed to design and initiate a new clinical trial to confirm the safety and efficacy of PMC. In January 2005, we again met with the agency and agreed on major trial parameters. We came to agreement with the FDA on a final trial design and received formal FDA approval in January 2006. We are currently working to understand the specific direct and indirect costs and are initiating our pursuit of a corporate partner in the interventional cardiology arena. There can be no assurance, however, that we will receive a favorable determination from the FDA.

As of December 31, 2005, we had an accumulated deficit of \$168,134,000. We may continue to incur operating losses. The timing and amounts of our expenditures will depend upon a number of factors, including the efforts required to develop our sales and marketing organization, the timing of market acceptance of our products and the status and timing of regulatory approvals.

Results of Operations***Year Ended December 31, 2005 Compared to Year Ended December 31, 2004******Net Revenues***

We generate our revenues primarily through the sale of our TMR laser base units and related handpieces, and related services. Net revenues of \$16,341,000 for the year ended December 31, 2005 increased \$887,000, or 6%, when compared to net revenues of \$15,454,000 for the year ended December 31, 2004. The increase in net revenues was primarily due to an increase in domestic and international handpiece revenues of \$1,271,000 and \$318,000, respectively, offset with a decrease in domestic and international laser sales of \$519,000 and \$140,000.

The increase in domestic handpiece revenue is primarily related to a higher average per unit selling price and a higher quantity sold in 2005 as compared to 2004. In the year ended December 31, 2005, domestic handpiece revenue consisted of \$1,717,000 in sales to customers operating under our loaned laser program, of which \$382,000 was attributed to premiums associated with such sales. In the year ended December 31, 2004, domestic handpiece revenue consisted of \$2,214,000 in sales of product to customers operating under our loaned laser program, of which \$699,000 was attributed to premiums associated with such sales. In the years

Table of Contents

ended December 31, 2005 and 2004, sales of product to customers not operating under our loaned laser program were \$9,703,000 and \$7,936,000, respectively.

For the year ended December 31, 2005, domestic laser sales decreased by \$519,000 compared to the year ended December 31, 2004 primarily due to fewer conversions of loaner lasers into laser sales. The overall decrease in domestic laser sales was partially offset with an increase in the average sales price of lasers sold. International sales, accounting for approximately 4% of total sales for the year ended December 31, 2005, increased \$192,000 from the prior year when international sales accounted for 3% of total sales. The increase in international sales occurred primarily as a result of an increase in handpiece units sold in 2005, partially offset by a decrease in the average laser unit sales price.

Gross Profit

Gross profit decreased to 82% of net revenues for the year ended December 31, 2005 as compared to 86% of net revenues for the year ended December 31, 2004. Gross profit in absolute dollars increased by \$82,000 to \$13,343,000 for the year ended December 31, 2005, as compared to \$13,261,000 for the year ended December 31, 2004. The decrease in gross profit as a percent of sales, and the slight increase in absolute terms, resulted from the increase in the cost of goods sold associated to our SolarGen 2100s laser system. The SolarGen 2100s was approved in late December 2004 and consequently, there were fewer sales of this new product in 2004 as compared to 2005.

Research and Development

Research and development expenditures of \$1,725,000 increased \$283,000 or 20% for the year ended December 31, 2005 when compared to \$1,442,000 for the year ended December 31, 2004. The increase was the result of increased expenses for our TMR registry and PEARL study.

For the year ended December 31, 2004, research and development expense included a credit of \$152,000 due to the reversal of amounts recorded in accrued liabilities in prior years for estimated clinical trial obligations subsequently determined not to be needed. The Company accrued amounts for estimated clinical trial payments based on participant enrollment in the clinical trials. Subsequently, as certain enrolled participants did not complete the clinical trials we were not obligated to make any payments. As a result, we reversed the respective accruals accordingly. As of December 31, 2004, there were no remaining liabilities associated with clinical trial obligations.

Sales, General and Administrative

Sales, general and administrative expenditures of \$14,110,000 increased \$2,788,000 or 25% for the year ended December 31, 2005 when compared to \$11,322,000 for the year ended December 31, 2004. The increase in expenses resulted primarily from an increase in employee expenses of \$1,705,000, related to additional headcount in 2005 and an increase in commissions paid out associated with an increase in sales revenue. In addition, there was a \$600,000 settlement agreement with our former President, Chief Operating Officer, Acting Chief Financial Officer, Chief Accounting Officer, Treasurer and Secretary with respect to his claims. Of this amount, \$400,000 was paid in August 2005 and the remaining \$200,000 was paid in January 2006. Additionally, advertising and marketing and training and clinical research expense increased \$166,000 and \$367,000 respectively, compared to the prior period, due to the promotion of new products.

Non-Operating Income (Expense)

Total non-operating income of \$635,000 increased \$2,451,000 or 135% for the year ended December 31, 2005 when compared to non-operating expense of \$1,816,000 for the year ended December 31, 2004. This increase is primarily due to the increase in the non-operating, non-cash charges in relation to the Secured Convertible Term Note (Note) issued in October 2004. These non-operating, non-cash charges resulted from mark to market charges on derivatives and warrants and interest and debt issuance costs associated with the Note. Since the fair value of the warrants and derivatives is tied in large part to our stock price, in the future, if our stock price increases between reporting periods, the warrants and derivatives become more

Table of Contents

valuable. As such, there is no way to forecast what the non-operating, non-cash charges will be in the future or what the future impact will be on our financial statements. The following table reflects the components of non-operating income (expense):

		Years Ended December 31,			
		2005	2004	Change	
		(\$ In thousands)			
Interest expense	Secured Convertible Term Note	\$ (444)	\$ (77)	\$ (367)	476%
Interest expense	other	(125)	(27)	(67)	115%
Interest income		162	48	114	238%
Non-cash interest expense	Accretion of discount on Note	(827)	(141)	(686)	487%
Non-cash interest expense	Amortization of debt issuance costs relating to the Note	(200)	(66)	(165)	471%
Non-cash interest expense-	Loss on conversion of debt	(387)		(387)	100%
Change in fair value of derivative		2,100	(1,263)	3,363	266%
Other non-cash income (expense)-	Change in fair value of warrants	356	(290)	646	223%
Total interest income (expense), net		\$ 635	\$ (1,816)	\$ 2,451	135%

Year Ended December 31, 2004 Compared to Year Ended December 31, 2003***Net Revenues***

We generate our revenues primarily through the sale of our TMR laser base units and related handpieces, and related services. Net revenues of \$15,454,000 for the year ended December 31, 2004 increased \$1,936,000, or 14%, when compared to net revenues of \$13,518,000 for the year ended December 31, 2003. The increase in net revenues was primarily due to an increase in domestic handpiece and laser revenues of \$1,113,000 and \$692,000, respectively, as well as an increase in international handpiece and laser sales of \$3,000 and \$65,000, respectively. In addition, service and other revenue of \$1,034,000 increased by \$63,000 for the year ended December 31, 2004 when compared to \$971,000 for the year ended December 31, 2003.

The increase in handpiece revenue is primarily related to a higher average per unit selling price and a higher quantity sold in 2004 as compared to 2003. In the year ended December 31, 2004, domestic handpiece revenue consisted of \$2,214,000 in sales to customers operating under our loaned laser program, of which \$699,000 was attributed to premiums associated with such sales. In the year ended December 31, 2003, domestic handpiece revenue consisted of \$2,649,000 in sales of product to customers operating under our loaned laser program, of which \$781,000 was attributed to premiums associated with such sales. In the years ended December 31, 2004 and 2003, sales of product to customers not operating under our loaned laser program were \$7,936,000 and \$6,387,000, respectively.

For the year ended December 31, 2004, domestic laser sales increased by \$692,000 compared to the year ended December 31, 2003 primarily from a moderate increase in the conversion of loaned lasers to outright sales. International sales, accounting for approximately 3% of total sales for the year ended December 31, 2004, increased \$67,000 from the prior year when international sales also accounted for 3% of total sales. The increase in international sales occurred primarily as a result of a higher average selling price of lasers sold abroad.

Gross Profit

Gross profit increased to 86% of net revenues for the year ended December 31, 2004 as compared to 83% of net revenues for the year ended December 31, 2003. Gross profit in absolute dollars increased by \$2,038,000 to \$13,261,000 for the year ended December 31, 2004, as compared to \$11,223,000 for the year ended December 31, 2003. The increase in gross profit as a percent of sales, and in absolute terms, resulted from an increase in margins due to a more favorable product mix as higher-margin laser sales accounted for a greater

Table of Contents

portion of revenues than in prior periods. In addition, margins on disposable handpieces increased due to improvements in manufacturing which resulted in higher yields.

Research and Development

Research and development expenditures of \$1,442,000 decreased \$502,000 or 26% for the year ended December 31, 2004 when compared to \$1,944,000 for the year ended December 31, 2003. The decrease resulted from decreases in the costs associated with our efforts to obtain FDA clearance for PMC. Such costs were \$1.4 million in 2003 compared to \$288,000 in 2004, with the decrease being partially offset by increased spending on research and development activity for our minimally invasive TMR platform in 2004.

For the years ended December 31, 2004 and 2003, research and development expense included a credit of \$152,000 and \$601,000, respectively, due to the reversal each year of amounts recorded in accrued liabilities in prior years for estimated clinical trial obligations subsequently determined not to be needed.

Sales, General and Administrative

Sales, general and administrative expenditures of \$11,322,000 increased \$1,732,000 or 18% for the year ended December 31, 2004 when compared to \$9,590,000 for the year ended December 31, 2003. The increase in expenses resulted primarily from an increase in employee expenses of \$1,504,000 primarily related to an increase in our sales force, as well as higher sales commissions paid out associated with an increase in sales revenue. Additionally, advertising and marketing, and training and clinical research expense increased \$202,000 and \$214,000 respectively, due to the promotion of new products. This was offset by a decrease in facilities and office expense of \$137,000 related to operational cost reduction efforts.

Non-Operating Income (Expense)

Total non-operating expense of \$1,816,000 increased \$1,779,000 or 4808% for the year ended December 31, 2004 when compared to \$37,000 for the year ended December 31, 2003. This increase is primarily due to non-operating, non-cash charges recorded in 2004 in relation to the Secured Convertible Term Note (Note) issued in October 2004. These non-operating, non-cash charges resulted from mark to market charges on derivatives and warrants and interest and debt issuance costs associated with the Note. Since the fair value of the warrants and derivatives is tied in large part to our stock price, in the future, if our stock price increases between reporting periods, the warrants and derivatives become more valuable. As such, there is no way to forecast what the non-operating, non-cash charges will be in the future or what the future impact will be on our financial statements.

The following table reflects the components of non-operating income (expense):

		Years Ended December 31,			
		2004	2003	Change	
		(\$ In thousands)			
Interest expense	Secured Convertible Term Note	\$ (77)	\$	\$ (77)	100%
Interest expense	other	(27)	(44)	17	39%
Interest income		48	7	41	586%
Non-cash interest expense	Accretion of discount on Note	(141)		(141)	100%
Non-cash interest expense	Amortization of debt issuance costs relating to the Note	(66)		(66)	100%
Change in fair value of derivative		(1,263)		(1,263)	100%
Other non-cash expense-	Change in fair value of warrants	(290)		(290)	100%
Total interest expense, net		\$ (1,816)	\$ (37)	\$ (1,779)	4808%

Table of Contents**Liquidity and Capital Resources**

Cash and cash equivalents were \$1,843,000 at December 31, 2005 compared to \$4,740,000 at December 31, 2004, a decrease of \$2,897,000. Net cash used in operating activities was \$2,368,000 for the twelve months ended December 31, 2005 primarily due to the cash used to fund our operations and to purchase inventory. The cash outflow for inventory was primarily due to the cost associated to the SolarGen 2100s laser system introduced in late December 2004 and the increase in inventory to meet the increase in sales. Cash and cash equivalents were \$4,740,000 at December 31, 2004 compared to \$1,013,000 at December 31, 2003, an increase of \$3,727,000. We used \$894,000 of cash for operating activities in the twelve months ended December 31, 2004 primarily due to increased accounts receivable balances from increased sales. In the twelve months ended December 31, 2003 we used \$653,000 of cash for operating activities primarily to pay down accounts payable and accrued liabilities.

During the year ended December 31, 2005, the Company issued an aggregate of 3,182,754 shares of its common stock in connection with the conversion of \$1,427,354 in principal and accrued interest on the Note. Each conversion of debt into equity is recorded as an extinguishment of debt and an increase in equity valued at the fair market value on the date of conversion. A gain or loss on extinguishment of debt is recorded at time of conversion and represents the difference in fair market value at the date of conversion less the actual conversion price. In the year ended December 31, 2005, the total loss associated to the Laurus conversions was \$387,000 and is included in the net cash used in operating activities.

Cash used in investing activities during the twelve months ended December 31, 2005 was \$687,000 related to the acquisition of property and equipment. Cash used in investing activities during the twelve months ended December 31, 2004 was \$474,000 related to the acquisition of property and equipment. Cash used in investing activities during the twelve months ended December 31, 2003 was \$107,000 and was attributed to the acquisition of property and equipment.

Cash provided by financing activities during the twelve months ended December 31, 2005 was \$158,000 due primarily to the release of restricted cash to unrestricted cash and the proceeds from the issuance of common stock from stock option exercises and the Employee Stock Purchase Plan. In 2006 we will not receive cash from the release of restricted cash as Laurus did not convert any shares from January through May 2006, at which time we repaid the Note's restricted cash. Cash provided by financing activities during the twelve months ended December 31, 2004 was \$5,095,000 due primarily to proceeds from the sale of common stock to private entities and the proceeds from the Secured Convertible Term Note agreement with Laurus Funds. In January 2004, we sold 3,100,000 shares of common stock to private investors for a total price of \$2,700,000. We also issued a warrant to purchase 3,100,000 additional shares of common stock at a price of \$1.37 per share. The warrant is immediately exercisable and has a term of five years. At December 31, 2005 and 2004, the fair value of this warrant was \$344,000 and \$496,000 and is classified on the Consolidated Balance Sheets as Other long-term liability. Cash provided by financing activities during the twelve months ended December 31, 2003 was \$283,000 due primarily to the proceeds from the issuance of common stock from stock option exercises and the Employee Stock Purchase Plan.

In October 2004, we completed a financing transaction with Laurus Master Fund, Ltd, a Cayman Islands corporation (Laurus), pursuant to which we issued a Secured Convertible Term Note in the aggregate principal amount of \$6.0 million and a warrant to purchase an aggregate of 2,640,000 shares of our common stock at a price of \$0.50 per share to Laurus in a private offering. Net proceeds to us from the financing, after payment of fees and expenses to Laurus and its affiliates, were \$5,752,500. Of this amount, we received \$2,875,250 shown in net cash provided by financing activities for the year ended December 31, 2004 and \$2,877,250 which was deposited in a restricted cash account and is shown in the Supplemental schedule of non-cash investing and financing activities for the year ended December 31, 2004. Funds deposited in the restricted cash account will only be released to us, if at all, upon satisfaction of certain conditions, such as: 1) voluntary conversion of the restricted funds by Laurus, and 2) conversion rights of the restricted funds by us subject to certain stock price levels and trading volume limitations. In May 2006, the Company repaid \$2,417,000 of the Note's outstanding principal amount out of the restricted cash account created for the

Table of Contents

benefit of Laurus and the Company and related interest of \$314,000. In connection with the repayment, the Company was required to pay a prepayment penalty of \$483,000 out of the Company's unrestricted cash.

The Note matures in October 2007, absent earlier redemption by us or earlier conversion by Laurus. Annual interest on the Note is equal to the prime rate published in The Wall Street Journal from time to time, plus two percent (2.0%), provided that such annual rate of interest may not be less than six and one-half percent (6.5%), subject to certain downward adjustments resulting from certain increases in the market price of our common stock. Interest on the Note is payable monthly in arrears on the first day of each month during the term of the Note, commencing November 2004. In addition, as of May 2005, we are required to make monthly principal payments of \$104,000 per month. To the extent that funds are released from the restricted cash account prior to repayment in full of the unrestricted portion of the Note proceeds, the monthly payment amount may be increased by an amount equal to the amount released from the restricted cash account divided by the remaining number of monthly principal payments due on or prior to the maturity date. The Note is convertible into shares of our common stock at the option of Laurus and, in certain circumstances, at our option.

The \$6,000,000 Note includes embedded derivative financial instruments. In conjunction with the Note, we issued a warrant to purchase 2,640,000 shares of common stock. The accounting treatment of the derivatives and warrant requires that we record the derivatives and warrant at their relative fair value as of the inception date of the agreement, and at fair value as of each subsequent balance sheet date. Any change in fair value will be recorded as non-operating, non-cash income or expense at each reporting date. If the fair value of the derivatives and warrant is higher at the subsequent balance sheet date, we will record a non-operating, non-cash charge. If the fair value of the derivatives and warrant is lower at the subsequent balance sheet date, we will record non-operating, non-cash income.

As of December 31, 2005 and December 31, 2004, the derivatives were valued at \$237,000 and \$2,337,000, respectively. Conversion related derivatives were valued using the Binomial Option Pricing Model with the following assumptions as of December 31, 2005 and December 31, 2004, respectively: dividend yield of 0% and 0%; annual volatility of 89.78% and 70.5%; and risk free interest rate of 4.40% and 3.25% as well as probability analysis related to trading volume restrictions. The remaining derivatives were valued using discounted cash flows and probability analysis. The warrant was valued at \$562,000 and \$766,000 at December 31, 2005 and December 31, 2004, respectively, using the Binomial Option Pricing model with the following assumptions: dividend yield of 0% and 0%; annual volatility of 90.69% and 70.5%; risk-free interest rate of 4.36% and 3.94%; and exercise factor of 2 times and 2 times.

Cash provided by financing activities during the twelve months ended December 31, 2003 was \$283,000 primarily due to proceeds from employee stock option exercises and common stock purchased under the Employee Stock Purchase Plan.

We have incurred significant losses for the last several years and at December 31, 2005 we had an accumulated deficit of \$168,134,000. Our ability to maintain current operations is dependent upon maintaining our sales at least at the same levels achieved this year.

Currently, our primary goal is to achieve profitability at the operating level. Our actions have been guided by this initiative, and the resulting cost containment measures have helped to conserve our cash. Our focus is upon core and critical activities, thus operating expenses that are nonessential to our core operations have been eliminated.

We believe our cash balance as of December 31, 2005 plus actions we have taken in 2006 to reduce sales, general and administrative expenses will be sufficient to meet our capital, debt and operating requirements through the next 12 months. We believe that if revenues from sales or new funds from debt or equity instruments are insufficient to maintain the current expenditure rate, it will be necessary to significantly reduce our operations until an appropriate solution is implemented.

We will have a continuing need for new infusions of cash if we incur losses in the future. We plan to increase our sales through increased direct sales and marketing efforts on existing products and achieving regulatory approval for other products. If our direct sales and marketing efforts are unsuccessful or we are

Table of Contents

unable to achieve regulatory approval for our products, we will be unable to significantly increase our revenues. We believe that if we are unable to generate sufficient funds from sales or from debt or equity issuances to maintain our current expenditure rate, it will be necessary to significantly reduce our operations. We may be required to seek additional sources of financing, which could include short-term debt, long-term debt or equity. There is a risk that we may be unsuccessful in obtaining such financing and that we will not have sufficient cash to fund our operations.

Contractual Obligations	Payments Due by Period				
	Total	Less than 1 Year	1-3 Years	4-5 Years	More than 5 Years
(In thousands)					
Secured convertible term note(1)	\$ 4,709	\$ 3,666	\$ 1,043	\$	\$
Secured convertible term note interest(1)(2)	479	447	32		
Capital Lease Obligations	17	5	12		
Short term note payable	16	16			
Operating Leases	310	310			
Total	\$ 5,531	\$ 4,444	\$ 1,087	\$	\$

(1) Payout amounts assume we will not be in default of the provisions in the secured convertible term note as discussed in Item 1A. Risk Factors. In May 2006, we repaid \$2,417,000 of the Note's restricted balance and related interest of \$314,000. We have included those amounts in the less than 1 year column accordingly. In connection with the repayment, we were required to pay a prepayment penalty of \$483,000 out of our unrestricted cash and this amount has not been included above.

(2) Assumes 8.25% interest rate.

Critical Accounting Policies and Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires our management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

The following presents a summary of our critical accounting policies and estimates, defined as those policies and estimates we believe are: (i) the most important to the portrayal of our financial condition and results of operations, and (ii) that require our most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effects of matters that are inherently uncertain. Our most significant estimates relate to the determination of the allowance for bad debt, inventory reserves, valuation allowance relating to deferred tax asset, warranty reserve, the assessment of future cash flows in evaluating intangible assets for impairment and assumptions used in fair value determination of warrants and derivatives.

Revenue Recognition:

We recognize revenue on product sales upon shipment of the products when the price is fixed or determinable and when collection of sales proceeds is reasonably assured. Where purchase orders allow customers an acceptance period or other contingencies, revenue is recognized upon the earlier of acceptance or removal of the contingency.

Revenues from sales to distributors and agents are recognized upon shipment when there is evidence of an arrangement, delivery has occurred, the sales price is fixed or determinable and collection of the sales proceeds is reasonably assured. The contracts regarding these sales do not include any rights of return or price protection clauses.

We frequently loan lasers to hospitals in accordance with our loaned laser programs. Historically, we recognized revenue for loaned lasers utilizing the policy stated above. Under certain loaned laser programs we

Table of Contents

charged the customer an additional amount (the Premium) over the stated list price on our handpieces in exchange for the use of the laser or collected an upfront deposit that can be applied towards the purchase of a laser. Under these programs, the Premiums or deposits were recorded as deferred revenue and recognized into income generally in the lesser of: (a) the amount of the deferred premium as of the end of a month; or (b) the list price of a laser divided by 24 months.

However, subsequent to December 31, 2005, we determined that these arrangements met the definition of a lease and should have been recorded under Statement of Financial Accounting Standards No. 13 Accounting for Leases (SFAS No. 13) as they convey the right to use the lasers over the period of time the customers are purchasing our handpieces. After considering the provisions of SFAS No. 13, the Company has concluded that the amounts should be classified as operating leases. In addition, the Premium is considered contingent rent under Statement of Financial Accounting Standards No. 29 Determining Contingent Rentals (SFAS No. 29) and therefore, such amounts allocated to the lease of the laser should be excluded from minimum lease payments and should be recognized as revenue when the contingency is resolved.

Based on our analysis of the impact of lease accounting to our consolidated financial statements for each of the four quarters in the years ended December 31, 2003, 2004, and 2005 and for the years ended December 31, 2003 and 2004 we determined that the impact between our historical accounting and the application of lease accounting was insignificant for restatement. However, we have reclassified the loaned lasers as property, plant and equipment in the accompanying balance sheets. Such adjustment resulted in an increase to property, plant and equipment and a related decrease to inventories in the amount \$87,000 at December 31, 2004. In addition, we have revised the statements of cash flows for the adjustments. For the year ended December 31, 2004, the adjustments resulted in an increase in depreciation and amortization expense in the amount of \$32,000, a decrease in inventory reserves in the amount of \$32,000, a decrease in the change in inventories of \$73,000 and an increase in the cash used in the acquisition of property and equipment of \$73,000. For the year ended December 31, 2003, the adjustments resulted in an increase in depreciation and amortization expense in the amount of \$153,000, a decrease in inventory reserves in the amount of \$153,000, an increase in the change of inventories in the amount of \$27,000, and an increase in the cash used for acquisitions of property and equipment in the amount of \$27,000.

Beginning in January 2006, we will record these transactions as leases in compliance with SFAS No. 13.

Accounts Receivable:

Accounts receivable consist of trade receivables recorded upon recognition of revenue for product sales, reduced by reserves for the estimated amount deemed uncollectible due to bad debt. The allowance for doubtful accounts is our best estimate of the amount of probable credit losses in our existing accounts receivable. We review the allowance for doubtful accounts quarterly with the corresponding provision included in general and administrative expenses. Past due balances over 90 days and over a specified amount are reviewed individually for collectibility. All other balances are reviewed on a pooled basis by type of receivable. Account balances are charged off against the allowance when we feel it is probable the receivable will not be recovered. We do not have any off-balance-sheet credit exposure related to our customers.

Inventories:

Inventories are stated at the lower of cost (principally standard cost, which approximates actual cost on a first-in, first-out basis) or market value. We regularly monitor potential excess, or obsolete, inventory by

Table of Contents

analyzing the usage for parts on hand and comparing the market value to cost. When necessary, we reduce the carrying amount of our inventory to its market value.

Valuation of Long-lived Assets:

We assess potential impairment of our finite lived, intangible assets and other long-lived assets when there is evidence that recent events or changes in circumstances indicate that their carrying value may not be recoverable. Reviews are performed to determine whether the carrying value of assets is impaired based on comparison to the undiscounted estimated future cash flows. If the comparison indicates that there is impairment, the impaired asset is written down to fair value, which is typically calculated using discounted estimated future cash flows. The amount of impairment would be recognized as the excess of the assets carrying value over its fair value. Events or changes in circumstances which may cause impairment include: significant changes in the manner of use of the acquired asset, negative industry or economic trends, and underperformance relative to historic or projected future operating results.

Income Taxes:

We account for income taxes using the liability method under which deferred tax assets or liabilities are calculated at the balance sheet date using current tax laws and rates in effect for the year in which the differences are expected to affect taxable income. Valuation allowances are established, when necessary, to reduce deferred tax assets to the amounts expected to be realized.

Item 7A. *Quantitative and Qualitative Disclosures About Market Risk.*

Quantitative Disclosures

We are exposed to market risks inherent in our operations, primarily related to interest rate risk and currency risk. These risks arise from transactions and operations entered into in the normal course of business. We do have multiple embedded derivatives included in the Secured Convertible Term Note (the Note) entered into with Laurus Master Fund in October 2004. Pursuant to the Note agreement, a warrant to purchase an aggregate of 2.6 million shares of our common stock was issued to Laurus. This warrant, along with multiple embedded derivatives in the agreement, have been recorded at their fair value at the inception date of the agreement, October 27, 2004, and will be recorded at fair value at each subsequent balance sheet date. Any change in value between reporting periods will be recorded as a non-operating, non-cash charge at each reporting date. The impact of these non-operating, non-cash charges could have an adverse effect on our stock price in the future.

The fair value of the warrant and derivatives is tied in a large part to our stock price. If our stock price increases between reporting periods, the warrant and derivatives become more valuable. As such, there is no way to forecast what the non-operating, non-cash charges will be in the future or what the future impact will be on our financial statements.

We are subject to interest rate risks on cash and cash equivalents and any future financing requirements. Our primary interest rate risk exposures relate to the impact of interest rate movements on our ability to obtain adequate financing to fund future operations. We are also exposed to interest rate risk on our note payable obligation resulting from the Secured Convertible Term Note. This Note bears an interest rate of prime plus 2%, and as such, is exposed to variability. In the future, the interest rate could be increased to levels that would have a material effect on our consolidated financial statements.

Table of Contents

The following table presents the future principal cash flows or amounts and related weighted average effective interest rates expected by year for our existing cash and cash equivalents and long-term debt instruments:

	2006	2007	2008	2009	2010	Total Fair Value
In Thousands						
Assets:						
Cash, cash equivalents	\$ 1,843	\$	\$	\$	\$	1,843
Weighted average interest rate	5.0%					5.0%
Liabilities:						
Fixed rate debt lease obligation	\$ 5	\$ 6	\$ 6	\$	\$	17
Weighted average interest rate	6.8%	6.8%	6.8%			6.8%
Variable rate note payable, net of restricted cash(1)	\$ 1,249	\$ 1,043	\$	\$	\$	2,292
Weighted average effective interest rate(2)	25%	25%				25%

(1) Payout amounts assume the Company will not be in default of the provisions in the secured convertible note as discussed in Item 1A. Risk Factors.

(2) Includes interest expense at the prime rate plus 2%, accretion of the debt discount, and amortization of debt issuance costs relating to the Secured Convertible Term Note.

Qualitative Disclosures

Interest Rate Risk. We do not hedge any balance sheet exposures and intercompany balances against future movements in foreign exchange rates. Given the relatively small number of foreign currency transactions, we do not believe that our potential exposure related to currency rate movements would have a material impact on future net income or cash flows.

Item 8. Consolidated Financial Statements and Supplementary Data.**Quarterly Results of Operations**

The following table sets forth certain quarterly financial information for the periods indicated. This information has been derived from unaudited financial statements that, in the opinion of management, have been prepared on the same basis as the audited information, and includes all normal recurring adjustments necessary for a fair presentation of such information. The results of operations for any quarter are not necessarily indicative of the results to be expected for any future periods.

Table of Contents

- (1) In June 2005, we reported an operating loss of \$1,034,000. However, we subsequently have determined that a \$600,000 legal settlement originally included in non-operating expense should have been included in operating expenses. Therefore, we have changed the June 30, 2005 operating loss to reflect this reclassification.

See Item 15 below and the Index therein for a listing of the consolidated financial statements and supplementary data filed as part of this report.

Recently Issued Accounting Standards

In May 2005, the Financial Accounting Standards Board (FASB) issued SFAS No. 154 Accounting Changes and Error Corrections A Replacement of APB Opinion No. 20 and FASB Statement 3. This statement replaces Accounting Principles Board (APB) Opinion No. 20 (APB No. 20), Accounting Changes, and SFAS No. 3, Reporting Accounting Changes in Interim Financial Reporting. APB No. 20 required that most voluntary changes in an accounting principle be recognized by including in net income of the period of the change the cumulative effect of changing to the new accounting principle. SFAS No. 154 generally requires retrospective application to prior period s financial statements of changes in accounting principle. SFAS No. 154 is effective in the first reporting period beginning after December 15, 2005. The adoption of SFAS No. 154 did not have a material impact on our consolidated financial condition or results of operations.

In December 2004, the Financial Accounting Standards Board (FASB) issued SFAS No. 123 (revised 2004), Share-Based Payment (SFAS No. 123(R)), which is a revision of SFAS No. 123. SFAS No. 123(R) supersedes APB 25 and amends SFAS No. 95, Statement of Cash Flows. Generally, the approach in SFAS No. 123(R) is similar to the approach described in SFAS No. 123. However, SFAS No. 123(R) requires all share-based payments to employees, including grants of employee stock options, to be recognized in the income statement based on their fair values. Pro forma disclosure is no longer an alternative. The provisions of this statement are effective for us as of January 1, 2006. We will adopt SFAS No. 123(R) in the first fiscal quarter of 2006.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

Item 9A. Controls and Procedures

Under the supervision and with the participation of the Company s management, including the Company s Chief Executive Officer and Chief Financial Officer, the Company evaluated the effectiveness of the design and operation of its disclosure controls and procedures (as defined in Rule 13a-15(e) and 15d-15(e) under the Exchange Act). Based on that evaluation, the Chief Executive Officer and Chief Financial Officer concluded that, as of the end of the period covered by this report, the Company s disclosure controls and procedures were not effective because of the following material weakness in internal control over financial reporting.

The Company did not maintain effective controls over cash disbursements. The Company determined that certain employee expense reports were not reviewed and the expenses were not authorized.

In response to the material weakness above, the Company has implemented an appropriate level of review for each employee expense report and will implement a new expense policy that will specifically address the issues that were identified. Management believes that these procedures, implemented upon the identification of the material weakness, will allow the Company to maintain effective internal control over financial reporting.

During the fiscal quarter ended December 31, 2005, no change in our internal control over financial reporting occurred that materially affected, or is reasonably likely to materially affect, our internal controls over financial reporting.

Item 9B. Other Information

None.

Table of Contents**PART III****Item 10. Directors and Executive Officers of the Registrant.****Board of Directors**

The members of our Board of Directors and certain information about each of them as of June 30, 2006 is set forth below:

Name	Age	Position
Michael J. Quinn(1)	62	Chairman of the Board, President and Chief Executive Officer
Joseph R. Kletzel, II(2)(3)	56	Director, Interim Chief Operating Officer
Robert L. Mortensen(3)	72	Director
Marvin J. Slepian, M.D.(3)	50	Chief Scientific Officer, Director
Gary S. Allen, M.D.(3)	40	Director

- (1) Mr. Quinn's employment was terminated by the Company on July 12, 2006. Although he remains a director, Mr. Quinn's service as Chairman of the Board terminated as of July 12, 2006.
- (2) Mr. Kletzel was appointed the Company's Chairman of the Board and interim Chief Executive Officer effective July 12, 2006.
- (3) Member of the Executive Committee of the Board of Directors.

During 2005, Robert C. Strauss and Kurt E. Wehberg, M.D. served as members of the Board of Directors. Mr. Strauss resigned from the Board in July 2005 and Dr. Wehberg resigned from the Board in May 2006.

The number of authorized Directors on our Board of Directors was six prior to May 22, 2006 at which time the Board of Directors reduced the authorized number of directors from six to five. All Directors hold office until the next annual meeting of the shareholders or until their successors have been elected and qualified. Officers serve at the discretion of our Board of Directors and are appointed annually. There are no family relationships between or among any of our directors or officers.

Michael J. Quinn served as our Chief Executive Officer, Chairman of the Board and Director from October 2000 until July 2006 and also served as President from October 2000 to May 2002 and from November 2003 to July 2006. From November 1999 to September 2000, Mr. Quinn served as Chief Executive Officer, President and a member of the Board of Directors for Premier Laser Systems, a manufacturer of surgical and dental products. From January 1998 to November 1999, Mr. Quinn served as President and Chief Operating Officer of Imagyn Medical Technologies, Inc., a manufacturer of minimally invasive surgical specialty products. From 1995 through December 1997, Mr. Quinn served as President and Chief Operating Officer of Fisher Scientific Company. Prior to 1995, Mr. Quinn held senior operating management positions at major healthcare organizations including American Hospital Supply Corporation, Picker International, Cardinal Health Group and Bergen Brunswig. From June 2005 to June 2006 Mr. Quinn served as a director of SynCardia Systems, Inc., of which Dr. Marvin Slepian is a founder and chief executive officer.

Joseph R. Kletzel, II became a member of the Board in September 2001. Mr. Kletzel has served as interim Chief Operating Officer since his appointment by the Board in May 2006 and was appointed as interim Chief Executive Officer and Chairman of the Board in July 2006. Mr. Kletzel, II served as Senior Vice President of Operations from July 2005 until November 2005 at which time he went on a medical leave of absence but remained a director. From July 2004 to June 2005 Mr. Kletzel was the Senior Vice President, General Manager Pacific Division. Mr. Kletzel has been a member of the Board since September 2001. From 1998 to 2002, Mr. Kletzel served as Chief Operating Officer for Advanced Tissue Sciences in La Jolla, California, where he was responsible for the daily operations, as well as all aspects of product & clinical research and development, the management of strategic alliances, regulatory

and information technology functions. Mr. Kletzel's previous positions include President of the Research Division of Fisher Scientific

Table of Contents

International in Pittsburgh, Pennsylvania from 1996-1998 and President and COO of Devon Industries in Chatsworth, California from 1992-1996. He received his BS in Biology at Villanova University and is a retired Captain from the U.S. Marine Corps.

Robert L. Mortensen has served as one of our directors since April 1992. In May 2006, Mr. Mortensen joined the Board of Directors of Mobius Photonics, a new company focused on developing a cutting edge fiber laser product. Mr. Mortensen was also a member of the Board of Directors of Lightwave Electronics Corporation until May 2005 when the Company was acquired. In 1984, Mr. Mortensen founded Lightwave Electronics Corporation, a solid-state laser company, and until his retirement in 2001 was either President or Chairman of the Board of that company. Mr. Mortensen holds an M.B.A. from Harvard University.

Marvin J. Slepian, M.D. became a member of our Board of Directors in December 2003. Since 1991, Dr. Slepian has taught medicine at the University of Arizona and currently serves as a Professor of Medicine and Director of Interventional Cardiology at the Saver Heart Center at the University of Arizona. Dr. Slepian is also the founder and chief executive officer of SynCardia Systems, Inc., a privately-held company that is developing a complete artificial heart for patients with end-stage heart disease. He was also one of the founders of Focal, Inc., a publicly-traded company that developed novel polymer-based therapeutics for surgery and angioplasty, including the world's first synthetic tissue sealant. Focal Inc. was acquired by Genzyme, Inc. in April 2001. Dr. Slepian has served as the Company's Chief Scientific Officer since August 2004 but is not an employee of the Company. Dr. Slepian received a Bachelor of Arts degree from Princeton University in 1977 and a Medical Doctor degree from the University of Cincinnati College of Medicine in 1981. He did his residency in internal medicine at NYU School of Medicine/Bellevue Hospital where he was also chief resident. In addition, Dr. Slepian was a Clinical and Research Fellow in the Cardiology Division of the Johns Hopkins University School of Medicine and participated in a second fellowship in interventional Cardiology at the Cleveland Clinic Foundation.

Gary S. Allen, MD became a member of the Board in October 2005. Dr. Allen is affiliated with Cardiovascular Surgeons, P.A. of Orlando, Florida and serves as the Chief of Cardiothoracic Surgery at Osceola Regional Medical Center in Kissimmee, Florida. He earned his Bachelor's Degree in Biochemistry from Skidmore College, his Medical Degree from Albany Medical College and completed his general surgery training and residency at the University of Texas Healthcare Sciences Center in Houston, Texas. Dr. Allen completed an NIH granted Post Doctoral fellowship at the University of Utah Artificial Heart Research Laboratory) and his cardiothoracic surgery fellowship at the University of Utah, Salt Lake City. His professional affiliations include the Society of Thoracic Surgeons, the Florida Society of Thoracic Surgeons, the International Society for Minimally Invasive Cardiac Surgery and the Southern Thoracic Society. Dr. Allen is also a member of the Scientific Advisory Boards of ESTECH and Alsius Corporation.

Executive Officers

See Part I, Item 1 of this Annual Report on Form 10-K for certain information regarding our executive officers.

Audit Committee

During 2005, Cardiogenesis had an Audit Committee consisting of Robert L. Mortensen and Robert C. Strauss. However, following Mr. Strauss' resignation from the Board in July 2005, the entire Board of Directors of the Company served as the audit committee. Since the termination of Mr. Quinn's employment in July 2006, the Executive Committee of the Board of Directors, consisting of Dr. Allen, Mr. Kletzel, Mr. Mortensen and Dr. Slepian has served as the Company's audit committee. Mr. Mortensen is an independent director as that term is defined by the listing standards of the National Association of Securities Dealers, Inc. During his term on the Audit Committee, Mr. Strauss was an independent director and had been determined by the Board of Directors to be a audit committee financial expert as defined by the Securities and Exchange Commission by virtue of his experience as chief executive officer, president and/or chief financial officer of other operating companies as described in the biographical information provided above. Although the Board of Directors intends to identify potential independent Board candidates to

Table of Contents

serve as an audit committee financial expert, pending identification and election of one or more such candidates, the Company will not have an audit committee financial expert serving on the Board of Directors.

Section 16(a) Beneficial Ownership Reporting Compliance

Section 16(a) of the Securities Exchange Act of 1934 requires our executive officers and directors, and persons who own more than ten percent of a registered class of our equity securities to file reports of ownership and changes in ownership with the SEC. Executive officers, directors and greater-than-ten-percent shareholders are required by SEC regulation to furnish us with copies of all Section 16(a) forms they file. Based solely on our review of the copies of such forms received by us or written representations from certain reporting persons, we believe that, except as indicated below, all of our executive officers, directors and ten percent shareholders complied with all applicable filing requirements during 2005, except as disclosed herein.

Gerald Arthur failed to timely file a Form 4 with respect to the grant of an option to purchase 40,000 shares of common stock on January 14, 2005. Mr. Arthur subsequently filed the requisite Form 4 on March 21, 2005.

Janet Fauls, a former officer of the Company, failed to timely file a Form 3/A as a result of her appointment as Vice President of Regulatory, Quality and Clinical Affairs on February 26, 2004. Ms. Fauls subsequently filed the requisite Form 3/A on May 17, 2005. In addition, Ms. Fauls failed to timely file a Form 4 with respect to the grant of an option to purchase 40,000 shares of common stock on January 14, 2005. Ms. Fauls subsequently filed the requisite Form 4 on March 21, 2005.

Joseph Kletzel, II failed to timely file a Form 4 with respect to the grant of an option to purchase 20,000 shares of common stock on January 14, 2005. Mr. Kletzel subsequently filed the requisite Form 4 on March 21, 2005.

Lee Langford, a former officer of the Company, failed to timely file a Form 3 as a result of his appointment as Vice President, General Manager of Central Area on March 10, 2005. Mr. Langford subsequently filed the requisite Form 3 on March 23, 2005. In addition, Mr. Langford failed to timely file a Form 4 with respect to the grant of an option to purchase 1,250 shares of common stock on September 28, 2005 and with respect to the grant of an option to purchase 5,000 shares of common stock on October 20, 2005. Mr. Langford subsequently filed the requisite Forms 4 on December 21, 2005.

Richard Lanigan failed to timely file a Form 4 with respect to the grant of an option to purchase 75,000 shares of common stock on January 14, 2005. Mr. Lanigan subsequently filed the requisite Form 4 on March 21, 2005.

John McIntyre failed to timely file a Form 4 with respect to the acquisition of 12,893 shares of common stock on November 15, 2005. Mr. McIntyre subsequently filed the requisite Form 4 on December 21, 2005.

Christine Ocampo, a former officer of the Company, failed to timely file a Form 4 with respect to the grant of an option to purchase 75,000 shares of common stock on January 14, 2005. Ms. Ocampo subsequently filed the requisite Form 4 on March 21, 2005.

Michael Quinn failed to timely file a Form 4 with respect to the grant of an option to purchase 200,000 shares of common stock on January 14, 2005. Mr. Quinn subsequently filed the requisite Form 4 on March 21, 2005.

Henry Rossell, Jr. failed to timely file a Form 4 with respect to the grant of an option to purchase 75,000 shares of common stock on January 14, 2005. Mr. Rossell subsequently filed the requisite Form 4 on March 21, 2005. In addition, Mr. Rossell failed to timely file a Form 4 with respect to the grant of options to purchase 3,750, 2,500, and 5,000 shares of common stock on August 9, 2005, September 2, 2005, and September 27, 2005, respectively. Mr. Rossell subsequently filed the requisite Forms 4 on December 21, 2005. Mr. Rossell also failed to timely file a Form 4 with respect to the grant of options to purchase 3,750 shares of common stock on each of December 8, 2005 and January 20, 2005. Mr. Rossell subsequently filed the requisite Forms 4 on April 28, 2006.

Table of Contents

Charles Scarano failed to timely file a Form 3 as a result of his appointment as Vice President, General Manager of International Division on March 10, 2005. Mr. Scarano subsequently filed the requisite Form 3 on March 24, 2005.

Gary Allen failed to timely file a Form 3 with respect to his appointment to the Board of Directors on October 28, 2005. Dr. Allen subsequently filed the requisite Form 3 on January 3, 2006. In addition, Dr. Allen failed to timely file a Form 4 with respect to the grant of an option to purchase 4,500 shares of common stock on April 17, 2006. Dr. Allen subsequently filed the requisite Form 4 on April 28, 2006.

Code of Ethics

Cardiogenesis has a Code of Business Conduct to promote honest and ethical conduct of our business, professional and personal relationships. The Code of Business Conduct covers all officers, directors, and employees and is available on our website at www.cardiogenesis.com/about/history.cfm.

Item 11. Executive Compensation.**Executive Officer Compensation**

The following table sets forth certain information concerning the compensation for the past three fiscal years of (i) each person who served as our Chief Executive Officer during 2005, (ii) the other four most highly compensated executive officers who were serving as executive officers at the end of 2005, and (iii) one additional individual who served as an executive officer during 2005 and who would have been one of the four most highly compensated officers in (ii) above had he been serving in such capacity at the end of 2005.

Summary Compensation Table

Name and Principal Position	Fiscal Year	Annual Compensation		Other Compensation (\$)	Long Term Compensation Awards
		Salary(\$)	Bonus(\$)		Securities Underlying Options/SARs (#)
Michael J. Quinn Former Chief Executive Officer, President and Chairman of the Board	2005	\$ 417,000	\$ 205,000	\$ 14,000(1)	200,000
	2004	410,000	90,000	7,000(2)	155,000
	2003	388,000	80,000	7,000(2)	439,008
Christine G. Ocampo(3) Former Chief Financial Officer, Senior Vice President and Treasurer	2005	191,000	50,000	10,000(4)	75,000
	2004	175,000	25,000	6,000(5)	50,000
	2003	136,000	20,000	5,000(6)	94,138
Richard P. Lanigan Senior Vice President of Operations	2005	262,000	60,000	13,000(7)	75,000
	2004	250,000	40,000	7,000(2)	50,000
	2003	224,000	30,000	7,000(2)	233,134
Henry R. Rossell Senior Vice President of Domestic Sales	2005	187,000	101,000	13,000(7)	90,000

Table of Contents

- (3) Effective April 5, 2006, Christine G. Ocampo resigned as an officer and employee of Cardiogenesis Corporation.
- (4) Includes \$9,000 in contributions to the Company's 401(k) plan and \$1,000 in life insurance premiums.
- (5) Includes \$5,000 in contributions to the Company's 401(k) plan and \$1,000 in life insurance premiums.
- (6) Includes \$4,000 in contributions to the Company's 401(k) plan and \$1,000 in life insurance premiums.
- (7) Includes \$12,000 in contributions to the Company's 401(k) plan and \$1,000 in life insurance premiums.
- (8) Includes \$3,000 in contributions to the Company's 401(k) plan and \$1,000 in life insurance premiums.
- (9) Includes \$8,000 in contributions to the Company's 401(k) plan and \$1,000 in life insurance premiums.
- (10) Includes \$500 in contributions to the Company's 401(k) plan and \$500 in life insurance premiums.
- (11) Effective May 22, 2006, the Board of Directors of the Company appointed Joseph R. Kletzel II, a director of the Company, as interim Chief Operating Officer, and effective July 12, 2006, as its Chairman and interim Chief Executive Officer.
- (12) Includes \$500 in life insurance premiums.

Option Grants in Fiscal Year 2005

The following table sets forth information regarding grants of options to purchase shares of our common stock made to the executive officers named in the Summary Compensation Table above during the year ended December 31, 2005.

Option Grants in Fiscal 2005 Fiscal Year Individual Grants(1)

Name	Number of Securities Underlying Options Granted	Percentage of Total Options Granted to Employees in Fiscal Year	Exercise Price per Share	Expiration Date	Potential Realizable Value at Annual Rates of Stock Price Appreciation for Option Term(2)	
					5%	10%
Michael J. Quinn	200,000	19%	\$ 0.54	1/14/2015	\$ 67,921	\$ 172,124
Christine G. Ocampo	75,000	7%	\$ 0.54	1/14/2015	\$ 25,470	\$ 64,546
Richard P. Lanigan	75,000	7%	\$ 0.54	1/14/2015	\$ 25,470	\$ 64,546
Henry R. Rossell	3,750	0.4%	\$ 0.42	12/8/2015	\$ 991	\$ 2,510
Henry R. Rossell	5,000	0.5%	\$ 0.49	9/27/2015	\$ 1,541	\$ 3,905
Henry R. Rossell	2,500	0.2%	\$ 0.54	9/2/2015	\$ 849	\$ 2,152
Henry R. Rossell	3,750	0.4%	\$ 0.61	8/9/2015	\$ 1,439	\$ 3,646
Henry R. Rossell	75,000	7%	\$ 0.54	1/14/2015	\$ 25,470	\$ 64,547
Charles J. Scarano	15,000	1%	\$ 0.54	1/14/2015	\$ 5,094	\$ 12,909
Joseph R. Kletzel, II	20,000	2%	\$ 0.54	1/14/2015	\$ 6,792	\$ 17,212

- (1) Each of these options was granted pursuant to our Stock Option Plan. Options to purchase a total of 1,036,250 shares of common stock were granted to our employees in the year ended December 31, 2005.
- (2) In accordance with the rules of the Securities and Exchange Commission, shown are the hypothetical gains or option spreads that would exist for the respective options. These gains are based on assumed rates of annual compounded stock price appreciation of 5% and 10% from the date the option was granted over the full option term. The 5% and 10% assumed rates of appreciation are mandated by the rules of the SEC and do not represent our estimate or projection of future increases in the price of our Common Stock.

Table of Contents**Options Exercises in Fiscal Year and Year End Option Values**

The following table sets forth certain information concerning options that were exercised during, or held at the end of, the year ended December 31, 2005 by each of the executive officers named in the Summary Compensation Table above during the year ended December 31, 2005.

Aggregate Option Exercises in Last Fiscal Year and Fiscal Year-End Option Values

	Shares Acquired on Exercise (#)	Value Realized	Number of Securities Underlying Unexercised Options at Fiscal Year-End (#):		Value of Unexercised In-the-Money Options at Fiscal Year-End (\$) (1):	
			Exercisable	Unexercisable	Exercisable	Unexercisable
Michael J. Quinn	100,000	\$ 9,000	1,631,091	37,917	\$ 18,901	\$
Christine G. Ocampo			200,750	6,167	\$	\$
Richard P. Lanigan			530,800	20,834	\$ 13,313	\$
Henry R. Rossell			262,500	27,500	\$ 10,000	\$
Charles J. Scarano			45,000	35,000	\$	\$
Joseph R. Kletzel, II			70,000	50,000	\$	\$

- (1) The value for an in the money option represents the difference between the exercise price of such option and \$0.42, the closing price of Cardiogenesis Common Stock on December 30, 2005, multiplied by the total number of shares subject to the option.

Employment Contracts of Executive Officers

Prior to his termination as an officer and employee on July 12, 2006, Michael J. Quinn was subject to an employment agreement. Pursuant to the terms of his employment contract, Mr. Quinn was eligible to receive his base salary and certain other benefits, including (i) an annual bonus determined by the Board of Directors, (ii) options or other rights to acquire our common stock, under terms and conditions determined by the Board of Directors. Under the terms of such employment contract, to the extent Mr. Quinn is determined to have been terminated without cause, he would be entitled to receive certain severance benefits which include payment of annual salary and continuation of insurance benefits for the remainder of his employment term or three years (which ever is longer).

Compensation Committee Interlocks and Insider Participation

From January until March 2005, the Compensation Committee of Cardiogenesis Board of Directors was composed of two directors: Robert C. Strauss and Marvin J. Slepian, M.D. From March 2005 until Dr. Wehberg's resignation as a director in May 2006, the Compensation Committee was comprised of Kurt E. Wehberg, M.D. and Marvin J. Slepian, M.D. Dr. Slepian has served as the Company's Chief Scientific Officer since August 2004 but is not an employee of the Company. Dr. Slepian and Dr. Wehberg each received certain consulting fees and expense reimbursements in 2005. See Certain Transactions below. The Board of Directors has not yet named a replacement member of the Compensation Committee and the Compensation Committee has taken no actions and held no meetings since Dr. Wehberg's resignation. Pending the addition of at least one more member of the Compensation Committee, the Executive Committee of the Board of Directors is expected to perform the functions of the Compensation Committee. In 2005, Michael J. Quinn, a current director and our former Chairman, Chief Executive Officer and President, served on the Board of Directors of SynCardia Systems, Inc., a privately-held company that is developing a complete artificial heart for patients with end-stage heart disease. Dr. Slepian is founder and chief executive officer of SynCardia Systems, Inc.

Other than as described above, no member of the Compensation Committee has a relationship that would constitute an interlocking relationship with executive officers or directors of another entity.

Table of Contents

Report of the Compensation Committee of the Board of Directors

The following is the Report of the Cardiogenesis Compensation Committee, describing the compensation policies and rationale applicable to the compensation paid to such executive officers for the year ended December 31, 2005. The information contained in the report shall not be deemed to be soliciting material or to be filed with the SEC, nor shall such information be incorporated by reference into any future filing under the Securities Act of 1933, as amended or the Securities Exchange Act of 1934, as amended, except to the extent that we specifically incorporate it by reference into such filing.

The Compensation Committee (the Committee) of the Board of Directors generally reviews the Company's executive compensation policies, evaluates the performance of executive officers and makes recommendations to the Board of Directors as to the compensation of the executive officers of the Company. In addition, the Committee administers Cardiogenesis' various incentive plans, including the Stock Option Plan and the Employee Stock Purchase Plan. The following is a report of the Committee describing compensation policies and rationale applicable with respect to the compensation paid to Cardiogenesis' executive officers for the fiscal year ended December 31, 2005.

Compensation Philosophy

Cardiogenesis' executive compensation programs are designed to attract, motivate and retain executives who will contribute significantly to the long-term success of Cardiogenesis and the enhancement of shareholder value. In addition to base salary, certain elements of total compensation are payable in the form of variable incentive plans tied to the performance of Cardiogenesis and the individual, and in the equity-based plans designed to closely align executive and shareholder interests.

Base Salary

Base salary for executives, including that of the chief executive officer, is set according to the responsibilities of the position, the specific skills and experience of the individual and the competitive market for executive talent. In order to evaluate the competitive position of Cardiogenesis' salary structure, the Committee makes reference to publicly available compensation information and informal compensation surveys obtained by management with respect to cash compensation and stock option grants to officers of comparable companies in Cardiogenesis' industry and its geographic location. Executive salary levels are set to approximate average rates, with the intent that superior performance under incentive bonus plans will enable the executive to elevate total cash compensation levels that are above average of comparable companies. Subject to the terms of any employment agreements, the Committee reviews salaries annually and adjusts them as appropriate to reflect changes in market conditions and individual performance and responsibilities.

Compensation to Chief Executive Officer in 2005

Mr. Michael Quinn, Cardiogenesis' former Chief Executive Officer, was employed pursuant to the terms of a written employment agreement. In 2005 Mr. Quinn received a base salary of \$417,000. Mr. Quinn's base salary was initially established by the Board of Directors at the time of his initial employment agreement in September 2001 based on the Board's perception of Mr. Quinn's operational experience and history in the marketing and sale of products. Subsequent increases being periodically implemented pursuant to the terms of his employment agreement. In addition, Mr. Quinn was paid a bonus of \$205,000 in 2005.

Stock Option Plan, Stock Purchase Plan and Certain Other Compensation

The Committee believes that Cardiogenesis' Stock Option Plan is an essential tool to link the long-term interests of shareholders and employees, especially executive management, and serves to motivate executives to make decisions that will, in the long run, give the best returns to shareholders. Stock options are generally granted when an executive joins Cardiogenesis, with subsequent grants also taking into account the individual's performance and the vesting status of previously granted options. These options typically vest over a three year period and are granted at an exercise price equal to the fair market value of Cardiogenesis' Common Stock at the date of grant. The sizes of initial option grants are based upon the position,

Table of Contents

responsibilities and expected contribution of the individual. This approach is designed to maximize shareholder value over a long term, as no benefit is realized from the option grant unless the price of Cardiogenesis Common Stock has increased over a number of years.

In addition to the Stock Option Plan, executive officers are eligible to participate in Cardiogenesis Employee Stock Purchase Plan. This plan allows employees to purchase Cardiogenesis Common Stock at a price equal to 85% of the lower of the fair market value at the beginning of the offering period or the fair market value at the end of the purchase period.

Other elements of executive benefits include life and long-term disability insurance, medical benefits and a 401(k) plan with an employer matching contribution for the fiscal year ended December 31, 2005. All such benefits are available to all regular, full-time employees of Cardiogenesis. Cardiogenesis also has maintained a Management Incentive Compensation Program for officers and certain other management positions, pursuant to which bonuses may be paid subject to Cardiogenesis attaining certain bonus targets.

The foregoing report has been furnished by the Compensation Committee of the Board of Directors of Cardiogenesis.

Compensation Committee

Marvin J. Slepian, M.D.

Director Compensation

For serving on the Board of Directors, non-employee directors receive fees of \$2,500 per board meeting and \$500 per committee meeting, provided such committee meeting does not occur on the same day as a board meeting. We also have a Director Stock Option Plan for non-employee directors. In 2005, directors Marvin Slepian, M.D., Robert L. Mortensen and Kurt Wehberg, M.D. were each granted an option to purchase an aggregate of 7,500 shares of Common Stock upon re-election to our Board of Directors in July 2005. Gary S. Allen, M.D. was granted an option to purchase 22,500 shares of common stock when he became a member of the Board of Directors in October 2005.

Certain Relationships and Related Transactions

During 2005, we paid Dr. Slepian \$4,161 for his involvement in various projects and reimbursed him \$2,000 for related expenses. We also paid Dr. Wehberg \$12,514 in 2005 for his proctoring services and involvement in tradeshows. In addition, during 2005 we paid Dr. Allen a total of \$81,641 for his consulting services and involvement in our TMR and Pearl studies, a significant portion of which was earned prior to his appointment as a member of our Board of Directors.

In 2005, Mr. Quinn's daughter was employed as the Company's Director of Corporate Events and Communications and received total cash compensation of \$83,296. In 2005, Mr. Kletzel's son was employed as Director of Sales of the Company and received total cash compensation of \$277,030.

Table of Contents**Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Shareholder Matters.
SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT**

The table below sets forth information known to us regarding the beneficial ownership of our common stock as of June 30, 2006; by each of the following:

each person known to us to be the beneficial owner of more than 5% of our outstanding common stock;

each named executive officer;

each of our directors; and

all executive officers and directors as a group.

Beneficial ownership is determined in accordance with rules of the Securities and Exchange Commission, and generally includes voting power and/or investment power with respect to securities. Shares of common stock subject to options currently exercisable or exercisable within sixty days of the date of this prospectus are deemed outstanding for purposes of computing the beneficial ownership by the person holding such options, but are not deemed outstanding for purposes of computing the percentage beneficially owned by any other person. Except as otherwise noted, the persons or entities named have sole voting and investment power with respect to all shares shown as beneficially owned by them. Unless otherwise indicated, the principal address of each of the stockholders below is Cardiogenesis Corporation, 26632 Towne Center Drive, Suite 320, Foothill Ranch, California, 92610.

Name of Beneficial Owner	Shares of Common Stock Beneficially Owned(1)	
	Number	Percentage Ownership(2)
5% Shareholders:		
Perkins Capital Management, Inc.(3) 730 East Lake Street Wayzata, MN 55391	5,763,700	12.7%
Non-Employee Directors:		
Robert L. Mortensen(4)	191,196	*
Marvin J. Slepian, M.D.(5)	135,000	*
Gary S. Allen, M.D.(6)	390,916	*
Named Executive Officers:		
Michael J. Quinn(7)(8)	2,006,380	4.3%
Christine G. Ocampo(9)	20,000	*
Richard P. Lanigan(10)	601,106	1.3%
Henry R. Rossell, Jr(11)	278,750	*
Charles J. Scarano(12)	73,333	*
Joseph R. Kletzel, Sr.(13)	212,222	*
All directors and executive officers as a group (12 persons)(14)	4,383,428	9.0%

* Less than 1%.

(1) Except as otherwise indicated and subject to applicable community property and similar laws, the Company assumes that each named owner has the sole voting and investment power with respect to such owner's shares (other than shares subject to options). Amount shares beneficially owned includes shares which are subject to

options that are currently, or within sixty days following June 30, 2006, will be, exercisable.

(2) Percentage ownership is based on 45,244,194 shares of Common Stock outstanding as of June 30, 2006.

Table of Contents

- (3) The number of shares of Common Stock beneficially owned or of record has been determined solely from information reported on a Schedule 13G as of January 27, 2006.
- (4) Includes 165,000 shares of Common Stock subject to stock options held by Mr. Mortensen that are exercisable within 60 days of June 30, 2006.
- (5) Includes 135,000 shares of Common Stock subject to stock options held by Dr. Slepian that are exercisable within 60 days of June 30, 2006.
- (6) Includes 19,166 shares of Common Stock subject to stock options held by Dr. Allen that are exercisable within 60 days of June 30, 2006.
- (7) Mr. Quinn's employment was terminated on July 12, 2006. His address is 31132 Via Consuelo, Coto de Caza, CA 92679
- (8) Includes 1,603,730 shares of Common Stock subject to stock options held by Mr. Quinn that are exercisable within 60 days of June 30, 2006.
- (9) Ms. Ocampo served as the Chief Executive Officer and Senior Vice President of the Company until her resignation on April 5, 2006. Share numbers represent shares of Common Stock subject to options that are exercisable within 60 days of June 30, 2006. The exercise period for such options expires on July 5, 2006.
- (10) Includes 565,523 shares of Common Stock subject to stock options held by Mr. Lanigan that are exercisable within 60 days of June 30, 2006.
- (11) Includes 278,750 shares of Common Stock subject to stock options held by Mr. Rossell that are exercisable within 60 days of June 30, 2006.
- (12) Includes 73,333 shares of Common Stock subject to stock options held by Mr. Scarano that are exercisable within 60 days of June 30, 2006.
- (13) Includes 212,222 shares of Common Stock subject to stock options held by Mr. Kletzel that are exercisable within 60 days of June 30, 2006.
- (14) Represents shares of Common Stock beneficially owned by all directors, named executive officers, and other executive officers of the Company as of June 30, 2006, as a group. Includes options to purchase an aggregate of 3,425,252 shares of Common Stock exercisable within 60 days of June 30, 2006.

Equity Compensation Plan Information

The following table gives information about our common stock that may be issued upon the exercise of options, warrants and rights under all of our existing equity compensation plans as of December 31, 2005, including the 1996 Stock Option Plan, as amended in July 2005, and the 1996 Director Stock Option Plan, as amended in July 2005.

Table of Contents

- (1) Consists of the Cardiogenesis Corporation Stock Option Plan, Employee Stock Purchase Plan and Director Stock Option Plan.
- (2) Consists of the Cardiogenesis Corporation Employee Stock Purchase Plan. The Employee Stock Purchase Plan enables employees to purchase the Company's common stock at a 15% discount to the lower of market value at the beginning or end of each six month offering period. As such, the number of shares that may be issued pursuant to the Employee Stock Purchase Plan during a given six month period and the purchase price of such shares cannot be determined in advance.
- (3) Consists of 75,000 shares of common stock at a price of \$1.63 per share in connection with a facilities lease agreement executed in 2001, 275,000 shares of common stock at exercise prices ranging from \$0.35 to \$0.44 per share in connection with a credit facility, 3,100,000 shares at a price of \$1.37 in conjunction with a private equity offering, 2,640,000 shares of common stock at a price of \$0.50 per share in connection with the secured convertible note agreement.

Item 13. *Certain Relationships and Related Transactions.*

During 2005, we paid Dr. Slepian \$4,161 for his involvement in various projects and reimbursed him \$2,000 for related expenses. We also paid Dr. Wehberg \$12,514 in 2005 for his proctoring services and involvement in tradeshows. In addition, during 2005 we paid Dr. Allen a total of \$81,641 for his consulting services and involvement in our TMR and Pearl studies, a significant portion of which was earned prior to his appointment as a member of our Board of Directors.

In fiscal 2005, Mr. Quinn's daughter was employed as the Company's Director of Corporate Events and Communications and received total cash compensation of \$83,296. In 2005, Mr. Kletzel's son was employed as Director of Sales of the Company and received total cash compensation of \$277,030.

Item 14. *Principal Accountant Fees and Services.***Audit Fees**

The following is a description of fees paid to Cardiogenesis' independent registered public accounting firms for each of the past two fiscal years. PricewaterhouseCoopers LLP (PwC) served as the Company's independent registered public accounting firm until July 5, 2005 at which time it was replaced by Corbin & Company, LLP (Corbin).

	2004	2005
Audit Fees	\$ 189,680	\$ 82,200
Audit-Related Fees	93,292	93,837
Tax Fees	39,914	
All Other Fees	1,500	6,250
Total PwC Fees	\$ 324,386	\$ 182,287

Audit fees represent amounts paid for professional services rendered for the audit of Cardiogenesis' financial statements for such periods and the review of the financial statements included in Cardiogenesis' Quarterly Reports on Form 10-Q during such periods. In 2005, \$20,200 was related to PwC and \$62,000 was related to Corbin.

Audit Related fees were for assurance and related services that are reasonably related to the performance of the audit or review of our financial statements, including services related to registration of securities sold by the Company during the year in question. In 2005, all amounts were related to PwC.

Tax fees were for the aggregate fees billed for professional services rendered by PwC for tax compliance services.

In 2004, all other fees consist of an annual subscription to PwC Comperio, an online library of authoritative financial reporting and assurance literature. In 2005, all amounts were related to PwC and

Table of Contents

included the annual subscription to PwC Comperio, fees for the transition to Corbin as our auditors, and fees related to foreign legal assistance.

Audit Committee Policies and Procedures for Preapproval of Audit and Non-Audit Services

The Audit Committee has established a policy regarding pre-approval of all audit and non-audit services provided by the independent registered public accounting firm. In the absence of a full Audit Committee, the Board of Directors or the Executive Committee of the Board, performed the functions of the Audit Committee and followed the pre-approval policies previously approved by the Audit Committee. On an on-going basis, management communicates specific projects and categories of service for which the advance approval of the Audit Committee (or the Board or Executive Committee, as applicable) is requested, if any. The Audit Committee (or the Board or Executive Committee, as applicable) reviews these requests and advises management if the Audit Committee approves the engagement of the independent registered public accounting firm.

The Audit Committee (or the Board or Executive Committee, as applicable) pre-approves all auditing services and permitted non-audit services (including the fees and terms thereof) to be performed for the Company by its independent registered public accounting firm, subject to the exceptions for non-audit services described in Section 10A(i)(1)(B) of the Securities Exchange Act of 1934, as amended, which are approved by the Audit Committee prior to the completion of the audit. The Executive Committee of the Board of Directors has considered whether the services provided by its independent registered public accounting firm are compatible with maintaining the independence of the independent registered public accounting firm and has concluded that the independence of both PwC and Corbin is maintained and is not compromised by the services provided.

PART IV**Item 15. Exhibits and Financial Statement Schedule.**

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To The Board of Directors

Cardiogenesis Corporation and Subsidiaries

We have audited the accompanying consolidated balance sheet of Cardiogenesis Corporation and subsidiaries (the Company) as of December 31, 2005, and the related consolidated statements of operations, shareholders' equity, and cash flows for the year then ended. Our audit also included the financial statement schedule listed in the Index at Item 15(a) (2) for the year ended December 31, 2005. These consolidated financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements and schedule based on our audit.

We conducted our audit in accordance with standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit on its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall consolidated financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Cardiogenesis Corporation and subsidiaries as of December 31, 2005, and the results of their operations and their cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the related financial statement schedule for the year ended December 31, 2005, when considered in relation to the basic consolidated financial statements, taken as a whole, presents fairly in all material respects the information set forth therein.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of Cardiogenesis Corporation

In our opinion, the consolidated balance sheet as of December 31, 2004 and the related consolidated statements of operations, shareholders' equity and cash flows for each of two years in the period ended December 31, 2004 (listed in the index appearing under Item 15(a)(1)) present fairly, in all material respects, the financial position of Cardiogenesis Corporation and its subsidiaries at December 31, 2004, and the results of their operations and their cash flows for each of the two years in the period ended December 31, 2004, in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item 15(a)(2) presents fairly, in all material respects, the information set forth therein as of and for the years ended December 31, 2004 and 2003, when read in conjunction with the related consolidated financial statements. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and financial statement schedule based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

Table of Contents

**CARDIOGENESIS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS**

1. Nature of Operations:

Cardiogenesis Corporation (Cardiogenesis or the Company) was founded in 1989 to develop, manufacture and market surgical lasers and accessories for the treatment of disease. Currently, Cardiogenesis emphasis is on the development and manufacture of products used for transmyocardial revascularization (TMR) and percutaneous myocardial channeling (PMC), which are cardiovascular procedures. PMC was formerly referred to as percutaneous myocardial revascularization (PMR). The new name PMC more literally depicts the immediate physiologic tissue effect of the Cardiogenesis PMC system to ablate precise, partial thickness channels into the heart muscle from the inside of the left ventricle.

Cardiogenesis markets its products for sale primarily in the U.S., Europe and Asia. Cardiogenesis operates in a single segment.

These financial statements contemplate the realization of assets and the satisfaction of liabilities in the normal course of business. Cardiogenesis has sustained significant operating losses for the last several years and may continue to incur losses through 2006. Management believes its cash and cash equivalents balance as of December 31, 2005 is sufficient to meet the Company s capital and operating requirements for the next 12 months.

Cardiogenesis may require additional financing in the future. There can be no assurance that Cardiogenesis will be able to obtain additional debt or equity financing, if and when needed, on terms acceptable to the Company. Any additional equity or debt financing may involve substantial dilution to Cardiogenesis stockholders, restrictive covenants or high interest costs. The failure to raise needed funds on sufficiently favorable terms could have a material adverse effect on the execution of the Company s business plan, operating results or financial condition. Cardiogenesis long term liquidity also depends upon its ability to increase revenues from the sale of its products and achieve profitability. The failure to achieve these goals could have a material adverse effect on the execution of the Company s business plan, operating results or financial condition.

2. Summary of Significant Accounting Policies:

Use of Estimates:

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Significant estimates made in preparing the consolidated financial statements include (but are not limited to) the allowance for doubtful accounts, inventory reserves, warranty obligations, asset impairment valuations and income tax valuations.

Reclassifications:

Certain reclassifications have been made to prior year amounts to conform to the current year presentation.

Cash and Cash Equivalents:

All highly liquid instruments purchased with a maturity of three months or less at the time of purchase are considered cash equivalents.

Table of Contents

CARDIOGENESIS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Accounts Receivable:

Accounts receivable consist of trade receivables recorded upon recognition of revenue for product sales, reduced by reserves for the estimated amount deemed uncollectible due to bad debt. The allowance for doubtful accounts is the Company's best estimate of the amount of probable credit losses in its existing accounts receivable. The Company reviews the allowance for doubtful accounts quarterly with the corresponding provision included in general and administrative expenses. Past due balances over 90 days and over a specified amount are reviewed individually for collectibility. All other balances are reviewed on a pooled basis by type of receivable. Account balances are charged off against the allowance when the Company feels it is probable the receivable will not be recovered. The Company does not have any off-balance-sheet credit exposure related to its customers.

Inventories:

Inventories are stated at the lower of cost (principally standard cost, which approximates actual cost on a first-in, first-out basis) or market value. The Company regularly monitors potential excess, or obsolete, inventory by analyzing the usage for parts on hand and comparing the market value to cost. When necessary, the Company reduces the carrying amount of inventory to its market value.

Patent Expenses:

Patent and patent related expenditures are expensed as general and administrative expenses as incurred.

Restricted Cash:

In conjunction with the secured convertible term note, \$2,877,250 of the amounts received by the Company was deposited in a restricted cash account. For the years ended December 31, 2005 and 2004, the Company earned \$84,000 and \$7,000, respectively, of interest income related to this balance, which is also restricted. Funds deposited in the restricted cash account will only be released to the Company, if at all, upon satisfaction of certain conditions, such as: 1) voluntary conversion of the restricted funds by Laurus, and 2) conversion rights of the restricted funds by Cardiogenesis subject to certain stock price requirements and trading volume limitations. See Note 7.

Property and Equipment:

Property and equipment are stated at cost and depreciated on a straight-line basis over their estimated useful lives of two to seven years. Assets acquired under capital leases are amortized over the shorter of their estimated useful lives or the term of the related lease (generally three to five years). Amortization of leasehold improvements is based on the straight-line method over the shorter of the estimated useful life or the lease term.

Accounting for the Impairment or Disposal of Long-Lived Assets:

The Company assesses potential impairment of finite lived, intangible assets and other long-lived assets when there is evidence that recent events or changes in circumstances indicate that their carrying value may not be recoverable. Reviews are performed to determine whether the carrying value of assets is impaired based on comparison to the undiscounted estimated future cash flows. If the comparison indicates that there is impairment, the impaired asset is written down to fair value, which is typically calculated using discounted estimated future cash flows. The amount of impairment would be recognized as the excess of the asset's carrying value over its fair value. Events or changes in circumstances which may cause impairment include: significant changes in the manner of use of the acquired asset, negative industry or economic trends, and

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

underperformance relative to historic or projected future operating results. The Company did not identify any asset impairment as of December 31, 2005.

Fair Value of Financial Instruments:

The Company's financial instruments consist primarily of cash and cash equivalents, accounts receivable, trade accounts payable, accrued liabilities, capital leases and the secured convertible term note and related embedded derivatives. The carrying amounts of certain of Cardiogenesis' financial instruments including cash and cash equivalents, accounts receivable, trade accounts payable, and accrued liabilities approximate fair value due to their short maturities. The fair value of the embedded derivatives related to the Secured Convertible Term Note and related obligations was determined using the Binomial Option Pricing Model.

Derivative financial instruments:

The Company's derivative financial instruments consist of embedded derivatives related to the \$6,000,000 Secured Convertible Term Note (Note). These embedded derivatives include certain conversion features and variable interest features. The accounting treatment of derivatives requires that the Company record the derivatives at their relative fair values as of the inception date of the agreement, and at fair value as of each subsequent balance sheet date. Any change in fair value is recorded as non-operating, non-cash income or expense at each reporting date. If the fair value of the derivatives is higher at the subsequent balance sheet date, the Company will record a non-operating, non-cash charge. If the fair value of the derivatives is lower at the subsequent balance sheet date, the Company will record non-operating, non-cash income. As of December 31, 2005 and 2004, the derivatives were valued at \$237,000 and \$2,337,000, respectively. Conversion related derivatives were valued using the Binomial Option Pricing Model with the following assumptions as of December 31, 2005 and 2004, respectively: dividend yield of 0% and 0%; annual volatility of 89.78% and 70.50%; and risk free interest rate of 4.40% and 3.25% as well as probability analysis related to trading volume restrictions. The remaining derivatives were valued using discounted cash flows and probability analysis. The derivatives are classified as current liabilities at December 31, 2005 and long-term liabilities at December 31, 2004. See Note 7.

Revenue Recognition:

Cardiogenesis recognizes revenue on product sales upon shipment of the products when the price is fixed or determinable and when collection of sales proceeds is reasonably assured. Where purchase orders allow customers an acceptance period or other contingencies, revenue is recognized upon the earlier of acceptance or removal of the contingency.

Revenues from sales to distributors and agents are recognized upon shipment when there is evidence of an arrangement, delivery has occurred, the sales price is fixed or determinable and collection of the sales proceeds is reasonably assured. The contracts regarding these sales do not include any rights of return or price protection clauses.

The Company frequently loans lasers to hospitals in accordance with its loaned laser programs. Historically, the Company recognized revenues for loaned lasers utilizing the policy stated above. Under certain loaned laser programs the Company charged the customer an additional amount (the Premium) over the stated list price on its handpieces in exchange for the use of the laser or collected an upfront deposit that can be applied towards the purchase of a laser. Under these programs, the Premiums or deposits were recorded as deferred revenue and recognized into income generally in the lesser of: (a) the amount of the deferred premium as of the end of a month; or (b) the list price of a laser divided by 24 months.

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

However, subsequent to December 31, 2005, the Company determined that these arrangements met the definition of a lease and should have been recorded under Statement of Financial Accounting Standards No. 13 Accounting for Leases (SFAS No. 13) as they convey the right to use the lasers over the period of time the customers are purchasing handpieces. After considering the provisions of SFAS No. 13, the Company has concluded that the amounts should be classified as operating leases. In addition, the Premium is considered contingent rent under Statement of Financial Accounting Standards No. 29 Determining Contingent Rentals (SFAS No. 29) and therefore, such amounts allocated to the lease of the laser should be excluded from minimum lease payments and should be recognized as revenue when the contingency is resolved.

Based on the Company's analysis of the impact of lease accounting to its consolidated financial statements for each of the four quarters in the years ended December 31, 2003, 2004, and 2005 and for the years ended December 31, 2003 and 2004, the Company determined that the impact between its historical accounting and the application of lease accounting was insignificant for restatement. However, the Company has reclassified the loaned lasers as property, plant and equipment in the accompanying balance sheets. Such adjustment resulted in an increase to property, plant and equipment and a related decrease to inventories in the amount \$87,000 at December 31, 2004. In addition, the Company has revised the statements of cash flows for the adjustments. For the year ended December 31, 2004, the adjustments resulted in an increase in depreciation and amortization expense in the amount of \$32,000, a decrease in inventory reserves in the amount of \$32,000, a decrease in the change in inventories of \$73,000 and an increase in the cash used in the acquisition of property and equipment of \$73,000. For the year ended December 31, 2003, the adjustments resulted in an increase in depreciation and amortization expense in the amount of \$153,000, a decrease in inventory reserves in the amount of \$153,000, an increase in the change of inventories in the amount of \$27,000, and an increase in the cash used for acquisitions of property and equipment in the amount of \$27,000.

Beginning in January 2006, the Company will record these transactions as leases in compliance with SFAS No. 13.

Shipping and Handling Costs and Revenues:

All shipping and handling costs are expensed as incurred and are recorded as a component of cost of sales. Amounts billed to customers for shipping and handling are included as a component of revenue.

Research and Development:

Research and development costs are charged to operations as incurred.

Warranties:

Cardiogenesis laser products are generally sold with a one year warranty. Cardiogenesis provides for estimated future costs of repair or replacement which are reflected in accrued liabilities in the accompanying financial statements.

Advertising:

Cardiogenesis expenses all advertising as incurred. Cardiogenesis advertising expenses were \$739,000, \$573,000 and \$80,000 for 2005, 2004, and 2003, respectively. Advertising expenses include fees for website design and hosting, reprints from medical journals, promotional materials and sales sheets.

Income Taxes:

Cardiogenesis accounts for income taxes using the asset and liability method under which deferred tax assets or liabilities are calculated at the balance sheet date using current tax laws and rates in effect for the

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

year in which the differences are expected to affect taxable income. Valuation allowances are established, when necessary, to reduce deferred tax assets to the amounts expected to be realized.

Stock-Based Compensation:

The Company accounts for non-employee stock-based compensation under SFAS No. 123 Accounting For Stock-Based Compensation. SFAS No. 123 defines a fair value based method of accounting for stock-based compensation. However, SFAS No. 123 allows an entity to continue to measure compensation cost related to stock and stock options issued to employees using the intrinsic method of accounting prescribed by Accounting Principles Board Opinion No. 25 (APB 25), Accounting for Stock Issued to Employees. Under APB 25, compensation cost, if any, is recognized over the respective vesting period based on the difference, on the date of grant, between the fair value of the Company's common stock and the grant price. Entities electing to remain with the accounting method of APB 25 must make pro forma disclosures of net income (loss) and earnings (loss) per share, as if the fair value method of accounting defined in SFAS No. 123 had been applied.

In December 2004, the Financial Accounting Standards Board (FASB) issued SFAS No. 123 (revised 2004), Share-Based Payment (SFAS No. 123(R)), which is a revision of SFAS No. 123. SFAS No. 123(R) supersedes APB 25 and amends SFAS No. 95, Statement of Cash Flows. Generally, the approach in SFAS No. 123(R) is similar to the approach described in SFAS No. 123. However, SFAS No. 123(R) requires all share-based payments to employees, including grants of employee stock options, to be recognized in the income statement based on their fair values. Pro forma disclosure is no longer an alternative. The provisions of this statement are effective for the Company as of January 1, 2006. The Company will adopt SFAS No. 123(R) in the first fiscal quarter of 2006.

SFAS No. 123(R) requires companies to recognize in the income statement the grant-date fair value of stock options and other equity-based compensation issued to employees. SFAS No. 123(R) also establishes accounting requirements for measuring, recognizing and reporting share-based compensation, including income tax considerations. Upon adoption of SFAS No. 123(R), the Company plans to use the modified prospective application. Under the modified prospective application, the cost of new awards and awards modified, repurchased or cancelled after the required effective date and the portion of awards for which the requisite service has not been rendered (unvested awards) that are outstanding as of the required effective date will be recognized as the requisite service is rendered on or after the required effective date. The compensation cost for that portion of awards shall be based on the grant-date fair value of those awards as calculated for either recognition or pro forma disclosures under SFAS No. 123.

As permitted by SFAS No. 123, the Company currently accounts for share-based payments to employees using APB 25's intrinsic value method and, as such, generally recognizes no compensation cost for employee stock options. Accordingly, the adoption of SFAS No. 123(R)'s fair value method will have a negative impact on the Company's results of operations, although it will have no impact on its overall financial position. The impact of adopting SFAS No. 123(R) cannot be predicted at this time because it will depend on levels of share-based payments granted in the future. However, had the Company adopted SFAS No. 123(R) in prior periods, the impact of that standard would have approximated the impact of SFAS No. 123 as described in the disclosure of pro forma net loss and loss per share. SFAS No. 123(R) also requires the benefits of tax deductions in excess of recognized compensation cost to be reported as a financing cash flow, rather than as an operating cash flow as required under current accounting literature. The requirement will reduce net operating cash flows and increase net financing cash flows in periods of adoption.

At December 31, 2005, the Company has three stock-based employee compensation plans. The Company accounts for those plans under the recognition and measurement principles of APB 25, and related interpretations (see Note 10). During the years ended December 31, 2005, 2004 and 2003, no stock-based employee compensation cost is reflected in the accompanying consolidated statements of operations, as all

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

options granted under those plans had exercise prices equal to or greater than the market value of the underlying common stock on the date of grant.

Had compensation cost for the Company's stock based employee compensation plans been determined based on the fair value of the options at the grant date for awards consistent with the provisions of SFAS No. 123, Cardiogenesis' net loss and net loss per share would have increased to the pro forma amounts indicated below (*in thousands, except per share amounts*):

	Year Ended December 31,		
	2005	2004	2003
Net loss as reported	\$ (1,857)	\$ (1,319)	\$ (348)
Stock-based employee compensation	(303)	(482)	(1,135)
Pro forma net loss	\$ (2,160)	\$ (1,801)	\$ (1,483)
Basic and diluted net loss per share as reported	\$ (0.04)	\$ (0.03)	\$ (0.01)
Pro forma basic and diluted net loss per share	\$ (0.05)	\$ (0.04)	\$ (0.04)
Weighted average basic and diluted shares outstanding	43,414	41,152	37,303

The above pro-forma disclosures are not necessarily representative of the effects on reported net income or loss for future years. The aggregate fair value and weighted average fair value per share of options granted in the years ended December 31, 2005, 2004 and 2003 were \$349,000, \$593,000 and \$651,000, and \$0.32, \$0.63 and \$0.33, respectively. The fair value of each option grant is estimated on the date of grant using the Black-Scholes option pricing model with the following weighted-average assumptions for grants in 2005, 2004 and 2003:

	December 31,		
	2005	2004	2003
Expected life of option	4.43 years	7 years	7 years
Risk-free interest rate	3.93%	3.7%	3.68%
Expected dividends			
Expected volatility	88%	79%	151%

The aggregate fair value and weighted average fair value per share of purchase rights under the Employee Stock Purchase Plan (ESPP) in fiscal years 2005, 2004 and 2003 were \$73,000, \$45,000 and \$55,000, and \$0.19, \$0.34, and \$0.43, respectively. The fair value for the purchase rights under the ESPP is estimated using the Black-Scholes option pricing model, with the following assumptions for the rights granted in 2005, 2004 and 2003:

	December 31,		
	2005	2004	2003
Expected life	0.5 years	0.5 years	0.5 years
Risk-free interest rate	3.93%	3.7%	3.68%
Expected dividends			

Expected volatility	88%	79%	151%
---------------------	-----	-----	------

Cardiogenesis accounts for non-employee stock-based awards, in which goods or services are the consideration received for the stock options issued, in accordance with the provisions of SFAS No. 123 and related interpretations. Compensation expense for non-employee stock-based awards is recognized in accordance with FASB Interpretation 28, Accounting for Stock Appreciation Rights and Other Variable Stock Options or Award Plans, an Interpretation of APB Opinions No. 15, and 25 (FIN 28). Under SFAS No. 123 and FIN 28, the Company records compensation expense based on the then-current fair values of the stock

F-13

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

options at each financial date. Compensation recorded during the service period is adjusted in subsequent periods for changes in the stock options' fair value.

Net Income (Loss) Per Share:

Basic earnings (loss) per share is computed by dividing the net income (loss) by the weighted average number of common shares outstanding for the period. Diluted income (loss) per share is computed giving effect to all dilutive potential common shares that were outstanding during the period. Dilutive potential common shares consist of incremental shares issuable upon the exercise of stock options and warrants using the treasury stock method and convertible notes payable using the as-if converted method.

Options to purchase 4,537,000, 4,177,000 and 4,070,000 shares of common stock were outstanding at December 31, 2005, 2004 and 2003, respectively. The range of per share exercise prices for these options was \$0.32-\$12.6875 for 2005, 2004 and 2003. Warrants to purchase 75,000 shares of common stock at \$1.63 per share were outstanding as of December 31, 2005 and 2004. Warrants to purchase 275,000 shares of common stock at prices ranging from \$0.35 to \$0.44 per share were outstanding as of December 31, 2005 and 2004. Warrants to purchase 3,100,000 shares of common stock at \$1.37 per share were outstanding at December 31, 2005 and 2004. In addition, warrants to purchase 2,640,000 shares of common stock at \$0.50 per share were also outstanding at December 31, 2005 and 2004. At December 31, 2005 and 2004, the convertible note payable balance was \$4,709,000 and \$6,000,000, respectively. The Note is convertible at \$0.50 per share subject to certain downward adjustments due to decreases in the Company's stock price. None of the options, warrants or convertible notes were included in the calculation of diluted loss per share because the exercise prices were greater than the average stock price used in the calculation and the effect would be anti-dilutive.

Recently Issued Accounting Standards:

In May 2005, the Financial Accounting Standards Board (FASB) issued SFAS No. 154 Accounting Changes and Error Corrections - A Replacement of APB Opinion No. 20 and FASB Statement 3. This statement replaces Accounting Principles Board (APB) Opinion No. 20 (APB No. 20), Accounting Changes, and SFAS No. 3, Reporting Accounting Changes in Interim Financial Reporting. APB No. 20 required that most voluntary changes in an accounting principle be recognized by including in net income of the period of the change the cumulative effect of changing to the new accounting principle. SFAS No. 154 generally requires retrospective application to prior periods' financial statements of changes in accounting principle. SFAS No. 154 is effective in the first reporting period beginning after December 15, 2005. The adoption of SFAS No. 154 will not have a material impact on the Company's consolidated financial condition or results of operations.

In December 2004, the Financial Accounting Standards Board (FASB) issued SFAS No. 123 (revised 2004), Share-Based Payment (SFAS No. 123(R)), which is a revision of SFAS No. 123. SFAS No. 123(R) supersedes APB 25 and amends SFAS No. 95, Statement of Cash Flows. Generally, the approach in SFAS No. 123(R) is similar to the approach described in SFAS No. 123. However, SFAS No. 123(R) requires all share-based payments to employees, including grants of employee stock options, to be recognized in the income statement based on their fair values. Pro forma disclosure is no longer an alternative. The provisions of this statement are effective for the Company as of January 1, 2006. The Company will adopt SFAS No. 123(R) in the first fiscal quarter of 2006.

Licensing fee for PMC, net	925	1,119
Rental security deposit	66	85
	\$ 1,172	\$ 1,585

On January 5, 1999, Cardiogenesis entered into an Agreement (the PLC agreement) with PLC Systems, Inc. (PLC), which granted Cardiogenesis a non-exclusive worldwide use of certain PLC patents. In return, Cardiogenesis agreed to pay PLC a fee totaling \$2,500,000 over an approximately forty-month period. The present value of these payments of \$2,300,000 was recorded as a prepaid asset, included in other assets, and is being amortized over the life of the underlying patents. The Company has included the related amortization expense in sales, general and administrative expenses in the accompanying consolidated statements of operations. The Company has recorded related accumulated amortization of \$1,363,000 and \$1,168,000 as of December 31, 2005 and 2004, respectively. The patent is being amortized straight-line at a rate of approximately \$195,000 per year through 2010.

F-15

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

The patents covered in the PLC agreement are valuable to the Company's Percutaneous Myocardial Channeling (PMC) product line. The PMC product line is not approved for sale in the United States but is sold internationally. If PMC product sales are not substantial and consistent in the future, the Company may suffer an impairment of the asset's value.

In connection with the October 2004 financing transaction discussed in Note 7, the Company capitalized debt issuance costs of \$417,000. The costs are being amortized over the life of the note using the effective interest method. The total amortization expense related to the debt issuance costs was \$200,000 and \$66,000 for 2005 and 2004 respectively. These expenses are included in non-cash interest expense in the accompanying consolidated statements of operations.

6. Accrued Liabilities:

Accrued liabilities consist of the following (*in thousands*):

	December 31,	
	2005	2004
Accrued accounts payable and related expenses	\$ 123	\$ 200
Accrued vacation	238	206
Accrued commissions	279	602
Accrued other	415	255
	\$ 1,055	\$ 1,263

7. Secured Convertible Term Note and Related Obligations:

In October 2004, the Company completed a financing transaction with Laurus Master Fund, Ltd, a Cayman Islands corporation (Laurus), pursuant to which the Company issued a Secured convertible term note (the Note) in the aggregate principal amount of \$6.0 million and a warrant to purchase an aggregate of 2,640,000 shares of the Company's common stock to Laurus in a private offering. Net proceeds to the Company from the financing, after payment of fees and expenses to Laurus, were \$5,752,500, \$2,875,250 of which was received by the Company and \$2,877,250 of which was deposited in a restricted cash account. Funds deposited in the restricted cash account will only be released to the Company, if at all, upon satisfaction of certain conditions, such as: 1) voluntary conversion of the restricted funds by Laurus, and 2) conversion rights of the restricted funds by Cardiogenesis subject to certain stock price levels and trading volume limitations.

The Note matures in October 2007, absent earlier redemption by the Company or earlier conversion by Laurus. The Note is convertible into shares of the Company's common stock at the option of Laurus and, in certain circumstances, at the Company's option and subject to certain trading volume limitations and certain limitations on Laurus' ownership percentage. The Laurus financing documents restrict the Company from obtaining additional debt financing, subject to certain specified exceptions. In addition, subject to certain exceptions, the Company has granted to Laurus a right of first refusal to provide additional financing in the event that the Company proposes to engage in additional debt financing or to sell any equity securities. The Note is collateralized by all of the Company's assets.

Under certain circumstances, the Note agreement could result in conversion of the Company's common stock at conversion prices that are low enough that the shares required would be in excess of the shares currently authorized by the Company. If the Company was in a situation where the current shares authorized were not sufficient to cover the conversion amount, a cash payment would be required. Since there is a possibility that a cash payment would be required, certain features of the Note as well as other equity related instruments have been recorded as liabilities on

the Company's consolidated balance sheets.

F-16

Table of Contents

CARDIOGENESIS CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The \$6,000,000 Note includes certain features that are considered embedded derivative financial instruments, such as a variety of conversion options, a variable interest rate feature, events of default and a variable liquidated damages clause. These features are described below, as follows:

The Note is convertible at the holder's option at any time at the fixed conversion price of \$.50 per share. This conversion feature has been identified as an embedded derivative and has been bifurcated and recorded on the Company's consolidated balance sheets at its fair value;

Beginning May 2005, the Company is required to make monthly principal payments of \$104,000 per month. The monthly payment as well as related accrued interest must be converted to common stock at the fixed conversion price of \$0.50 if the fair value of the Company's common stock is greater than \$0.55 per share for the 5 days preceding the payment due date. This conversion feature has been identified as an embedded derivative and has been bifurcated and recorded on the Company's balance sheet at its fair value;

Restricted cash must be converted at a fixed conversion price of \$0.50 per share if the fair value of the Company's common stock is greater than 125%, 150% or 175% (each threshold must meet higher trading volume limits) of the initial fixed conversion price of \$0.50 per share. This conversion feature has been identified as an embedded derivative and has been bifurcated and recorded on the Company's consolidated balance sheets at its fair value;

Annual interest on the Note is equal to the prime rate published in The Wall Street Journal from time to time, plus two percent (2.0%), provided that such annual rate of interest may not be less than six and one-half percent (6.5%). For every 25% increase in the Company's common stock fair value above \$0.50 per share, the interest rate will be reduced by 2%. The interest rate may never be reduced below 0%. Interest on the Note is payable monthly in arrears on the first day of each month during the term of the Note, beginning November 2004. The potential interest rate reduction due to future possible increases in the Company's stock price has been identified as an embedded derivative and has been bifurcated and recorded on the Company's consolidated balance sheets at its fair value;

The Note agreement includes a liquidated damages provision based on any failure to meet registration requirements for shares issuable under the conversion of the note or exercise of the warrants by February 2005. This liquidated damages feature represented an embedded derivative, however since the Company has met the registration requirements, this derivative is no longer valid.

The Note agreement contains certain events of default including delinquency, bankruptcy, change in control and stop trade or trade suspension. In the event of default, Laurus has the right to call the debt at a 30% premium, increase the note rate to the stated rate, increase the note rate by an additional 12%, foreclose on the collateral, and/or seek other remedies. Laurus' right to increase the interest rate on the debt in the event of default represents an embedded derivative. However, based on the de minimus value associated with this feature, no value has been assigned at issuance and at December 31, 2005. Pursuant to the terms of the Note, an event of default includes a suspension of trading of the Company's common stock on the OTC Bulletin Board which remains uncured within thirty (30) days of notice of the suspension. To the extent that the delisting is deemed a suspension of trading and the Company is unable to have its common stock listed on the OTC Bulletin Board within such thirty day period, the Company will be in default of its obligations under the Note. If an event of default occurs under the Note, interest on the Note will accrue at the default rate which is the then current prime rate plus 12% per annum until the default is cured. In addition, the holder of the Note will have the right to accelerate the Note and declare it immediately due and payable and exercise its rights as a secured creditor under applicable law and the security agreement with the Company, including the right to foreclose upon the assets of the Company securing the Note,

which constitute substantially all of the Company's assets. Based on the above, the Company has classified the entire balance of the secured

F-17

Table of Contents

CARDIOGENESIS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

convertible term note and related obligations as current at December 31, 2005. In addition, to mitigate the financial consequences of any possible default, in May 2006, the Company repaid approximately \$2,417,000 of the outstanding principal amount of the Note out of the restricted cash account created for the benefit of Laurus and the Company. In connection with the repayment, the Company was required to pay a prepayment penalty (equal to 20% of the amount to be repaid) out of the Company's unrestricted cash.

In conjunction with the Note, the Company issued a warrant to purchase 2,640,000 shares of common stock. The accounting treatment of the derivatives and warrant requires that the Company record the derivatives and the warrant at their relative fair value as of the inception date of the agreement, and at fair value as of each subsequent balance sheet date. Any change in fair value will be recorded as non-operating, non-cash income or expense at each reporting date. If the fair value of the derivatives and warrants is higher at the subsequent balance sheet date, the Company will record a non-operating, non-cash charge. If the fair value of the derivatives and warrants is lower at the subsequent balance sheet date, the Company will record non-operating, non-cash income. As of December 31, 2005 and December 31, 2004, the derivatives were valued at \$237,000 and \$2,337,000, respectively. Conversion related derivatives were valued using the Binomial Option Pricing Model with the following assumptions as of December 31, 2005 and December 31, 2004, respectively: dividend yield of 0% and 0%; annual volatility of 89.78% and 70.5%; and risk free interest rate of 4.40% and 3.25% as well as probability analysis related to trading volume restrictions. The remaining derivatives were valued using discounted cash flows and probability analysis. The derivatives are classified as current liabilities at December 31, 2005 and long-term liabilities at December 31, 2004. See Note 7.

The warrant was valued at \$562,000 and \$766,000 at December 31, 2005 and 2004, respectively, using the Binomial Option Pricing model with the following assumptions: dividend yield of 0% and 0%; annual volatility of 90.69% and 70.5%; risk-free interest rate of 4.36% and 3.94%; and exercise factor of 2 times and 2 times. The fair value of this warrant is included in the Secured Convertible Term Note and related obligations on the consolidated balance sheets and the change in the fair value is included in other non-cash income (expense) on the consolidated statements of operations.

The initial relative fair value assigned to the embedded derivative was \$1,075,000 and the initial relative fair value assigned to the warrant was \$631,000, both of which were recorded as discounts to the Note and are being recorded at fair market value at each balance sheet date. The fair values of the derivative at December 31, 2005 and 2004, were \$237,000 and \$2,337,000, respectively. The fair values of the warrant at December 31, 2005 and 2004, were \$562,000 and \$766,000, respectively. In addition, the initial relative fair value assigned to the discount on the note payable was \$1,706,000 and the initial value of the debt issue costs was \$417,000, both of which were recorded as discounts to the Note and are being amortized to interest expense over the expected term of the debt, using the effective interest method. At December 31, 2005 and 2004, the unamortized discount on the Note was \$739,000 and \$1,488,000, respectively. The weighted average effective interest rate on the Note for the years ended December 31, 2005 and 2004, was 25%.

Future principal obligations due under the Note, net of restricted cash and assuming the Company will not be in default of the provisions in the secured convertible note as discussed above, are as follows:

Year Ending December 31,

2006	1,249,000
2007	1,043,000
Total	\$ 2,292,000

The market price of the Company's common stock significantly impacts the extent to which the Company is permitted to convert the unrestricted and restricted portions of the Laurus debt into shares of the Company's common stock. The lower the market price of the Company's common stock as of the respective

F-18

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

times of conversion, the more shares the Company will need to issue to Laurus to convert the principal and interest payments then due on the unrestricted portion of the debt. If the market price of the Company's common stock falls below certain thresholds, the Company will be unable to convert any such repayments of principal and interest into equity, and the Company will be forced to make such repayments in cash. The Company's operations could be materially adversely impacted if the Company is forced to make repeated cash payments on the unrestricted portion of the Laurus debt.

Further, prior to the full repayment of the unrestricted portion of the Laurus debt, the Company will only be able to require conversions of the remaining restricted cash amount of \$2,508,000 to the extent the market price of the Company's common stock exceeds certain levels. To the extent that the market price of the Company's common stock does not reach such specified levels, the Company will not be entitled to take possession of any of the restricted cash during the term of the Laurus note. The restricted portion of the debt will continue to accrue interest during the entire period that the Company is unable to require conversion. In addition, to the extent that conversions of the restricted portion of the debt are not effected during the term of the Note, the Company has only a limited ability to convert a specified amount of the restricted debt (subject to meeting certain minimum market price thresholds and volume requirements), and the Company will be required to repay the remaining restricted principal and interest in cash. The cash required to pay such principal amounts payable would come from the restricted cash and any such interest amounts payable would most likely be paid from available cash, which may not be sufficient to repay the amounts due.

The following table presents a reconciliation between the principal amount of the Note and the current and long term carrying amount of the Note on the consolidated balance sheets:

	December 31, 2005	December 31, 2004
Principal Note balance	\$ 6,000	\$ 6,000
Principal conversions	(1,184)	
Cash payments	(107)	
Total secured convertible term note	4,709	6,000
Unamortized discount on Note	(739)	(1,488)
Derivative valuation	237	2,337
Warrant valuation	562	766
Total secured convertible term note and related obligations	\$ 4,769	\$ 7,615

During the year ended December 31, 2005, the Company issued an aggregate of 3,182,754 shares of its common stock in connection with the conversion of \$1,427,354 in principal and accrued interest on the Note. Each conversion of debt into equity is recorded as an extinguishment of debt and an increase in equity valued at the fair market value on the date of conversion. A gain or loss on extinguishment of debt is recorded at time of conversion and represents the difference in fair market value at the date of conversion less the actual conversion price. In the year ended December 31, 2005, the total loss associated to the Laurus conversions was \$387,000 and is included in the Statements of cash flows for the years ended December 31, 2005, 2004 and 2003.

8. Long-term Liabilities:

In January 2004, the Company sold 3,100,000 shares of common stock to private investors for a total price of \$2,700,000. The Company also issued a warrant to purchase 3,100,000 additional shares of common stock at a price

of \$1.37 per share. The warrant is immediately exercisable and has a term of five years. At December 31, 2005 and 2004, the fair value of this warrant was \$344,000 and \$496,000 and is classified in the

F-19

Table of Contents**CARDIOGENESIS CORPORATION****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

consolidated balance sheets as the other long-term liability and the change in the fair value is included in other non-cash income (expense) on the consolidated statements of operations.

9. Commitments and Contingencies:**Operating Lease**

Cardiogenesis has entered into a non-cancelable operating lease for an office facility with terms extending through October 2006. The minimum future rental payments are as follows (*in thousands*):

Year Ending December 31,

2006	310
	\$ 310

Rent expense was approximately \$362,000, \$359,000, and \$547,000 for the years ended December 31, 2005, 2004 and 2003, respectively.

Litigation

In November 2003, the Company's employment relationship with Darrell Eckstein, the former President, Chief Operating Officer, Acting Chief Financial Officer, Chief Accounting Officer, Treasurer and Secretary was terminated. In connection with the termination of his employment and his employment agreement with the Company, Mr. Eckstein brought a breach of contract claim (among other claims) against the Company whereby he sought unspecified monetary damages. On August 9, 2005, the Company entered into a settlement agreement with Mr. Eckstein with respect to all of his claims against the Company. The Company denied any wrongdoing as part of the settlement. The total settlement amount was \$600,000 and was charged to expense in June 2005. In the Company's Form 10Q for the quarters ended June 30, 2005 and September 30, 2005, the Company included this expense in the non-operating income (expense) line item on the consolidated statements of operations. However, based on further review, for the year ended December 31, 2005, the expense has been included in the sales, general and administrative line item in the consolidated statement of operations. In accordance with the settlement agreement, the Company paid \$400,000 in August 2005 and \$200,000 in January 2006. Pursuant to the terms of the settlement agreement, the Company received a release of all claims.

On July 12, 2006, the Company terminated Michael Quinn as Chairman, Chief Executive Officer and President in accordance with the terms of his employment agreement. Mr. Quinn has subsequently alleged wrongful termination and a breach of his employment agreement and has indicated that he believes he is entitled to monetary damages in excess of \$4,750,000 plus other, non-economic damages, including punitive damages. As of July 22, 2006, the Company had not been informed of the initiation of any formal legal proceedings.

10. Shareholders Equity:**Issuances of Common Stock:**

In January 2004, Cardiogenesis sold approximately 3,100,000 shares of common stock to private investors for a total price of \$2,700,000.

During the year ended December 31, 2005, the Company issued an aggregate of 3,182,754 shares of its common stock in connection with the conversion of \$1,427,354 in principal and accrued interest on the Note. See Note 7.

Table of Contents

CARDIOGENESIS CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

During the year ended December 31, 2005, the Company issued 146,388 shares of common stock for \$47,210 in connection with the exercise of options.

During the year ended December 31, 2005, the Company issued 272,697 shares of common stock for \$103,691 in connection with purchases under the ESPP (see below).

Warrants:

During the year ended December 31, 2001, the Company issued warrants to purchase 75,000 shares of common stock at a price of \$1.63 per share in connection with a facilities lease agreement executed in 2001. The warrants were fair valued at \$94,000 using the Black-Scholes pricing model and are being amortized over the five-year lease term. For the years ended December 31, 2005, 2004 and 2003, the Company recorded amortization charges to rent expense of \$19,000 per year in connection with these warrants. The warrants expired in May 2006 and were outstanding at December 31, 2005.

During the year ended December 31, 2003, the Company issued five-year warrants to purchase 275,000 shares of common stock at exercise prices ranging from \$0.35 to \$0.44 per share in connection with a credit facility that was executed in March 2003 and canceled in March 2004. The warrants were fair valued at \$75,000 using the Black-Scholes pricing model. For the year ended December 31, 2004, the Company recorded amortization of \$31,000 in connection with these warrants. The warrants were fully amortized in 2004 when the credit facility was cancelled. The warrants expire in March 2008 and were outstanding at December 31, 2005.

In January 2004, in conjunction with a private equity offering, Cardiogenesis issued a warrant to purchase approximately 3,100,000 shares of common stock at a price of \$1.37 per share. The warrants are immediately exercisable and have a term of five years.

In October 2004, Cardiogenesis issued a warrant to purchase an aggregate of 2,640,000 shares of the Company's common stock at a price of \$0.50 per share, with a term of 7 years, to Laurus Master Fund in connection with the secured convertible note agreement. (See Note 7).

During the years ended December 31, 2005, 2004 and 2003, no warrants were exercised, forfeited or cancelled.

With the signing of the Laurus agreement in October 2004, the Company no longer had enough authorized shares to cover potential conversion of every equity instrument currently outstanding. Under EITF 00-19, it is assumed that there may be a circumstance that cash payment may have to be made by the Company to compensate the holder of these instruments, if authorized shares are not available. Therefore, in October 2004, the Company recognized a liability of \$341,000 for the value of the warrant to purchase 3,100,000 shares of common stock at the date of the signing of the agreement with Laurus. At December 31, 2004 the value of the warrant had increased to \$496,000 and an expense of \$155,000 included in Other non-cash expense on the income statement for to mark to market the value of the warrant. At December 31, 2005, the warrant was valued at \$496,000. In addition, the Company recognized a liability of \$631,000 for the value of the warrant to purchase 2,640,000 shares of common stock at the date of the signing of the agreement with Laurus. At December 31, 2004 the value of the warrant had increased to \$766,000 and an expense of \$135,000 included in Other non-cash expense on the income statement to mark to market the value of the warrant. At December 31, 2005, the warrant was valued at \$562,000.

Options Granted to Consultants:

At December 31, 2005, 2004, 2003, options for consultants to purchase a total of 70,000, 70,000 and 57,000 shares of common stock, respectively, at exercise prices ranging from \$0.50 to \$1.40 per share were outstanding. The terms under which stock options are exercised are the same as Cardiogenesis Stock Option

CARDIOGENESIS CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Plan which is described below. Substantially all of these options were exercisable at the date of grant. These options are included in the Stock Option Plan disclosures below.

Options Granted to Employees:

During the years ended December 31, 2005 and 2004, the Company issued options to purchase 1,081,250 and 941,000 shares of the Company's common stock to certain officers, directors and employees. During the years ended December 31, 2005, 2004 and 2003, no compensation expense was recognized in the accompanying consolidated statements of operations for these options issued under APB 25.

Shareholder Rights Plan:

The Company's articles of incorporation authorize the board of directors, subject to any limitations prescribed by law, to issue shares of preferred stock in one or more series without shareholder approval. On August 17, 2001 the Company adopted a shareholder rights plan, as amended, and under the rights plan, the board of directors declared a dividend distribution of one right for each outstanding share of common stock to shareholders of record at the close of business on August 30, 2001. Pursuant to the Rights Agreement, in the event (a) any person or group acquires 15% or more of the Company's then outstanding shares of voting stock (or 21% or more of the Company's then outstanding shares of voting stock in the case of State of Wisconsin Investment Board), (b) a tender offer or exchange offer is commenced that would result in a person or group acquiring 15% or more of the Company's then outstanding voting stock, (c) the Company is acquired in a merger or other business combination in which the Company is not the surviving corporation or (d) 50% or more of the Company's consolidated assets or earning power are sold, then the holders of the Company's common stock are entitled to exercise the rights under the Rights Plan, which include, based on the type of event which has occurred, (i) rights to purchase preferred shares from the Company, (ii) rights to purchase common shares from the Company having a value twice that of the underlying exercise price, and (iii) rights to acquire common stock of the surviving corporation or purchaser having a market value of twice that of the exercise price. The rights expire on August 17, 2011, and may be redeemed prior thereto at \$0.001 per right under certain circumstances.

Stock Option Plan:

Cardiogenesis maintains a Stock Option Plan, which includes the Employee Program under which incentive and nonstatutory options may be granted to employees and the Consultants Program, under which nonstatutory options may be granted to consultants of the Company. As of December 31, 2005, Cardiogenesis had reserved a total of 11,100,000 shares of common stock for issuance under this plan. Under the plan, options may be granted at not less than fair market value, as determined by the Board of Directors. Options generally vest over a period of three years and expire ten years from date of grant. No shares of common stock issued under the plan are subject to repurchase.

Directors' Stock Option Plan:

Cardiogenesis maintains a Directors' Stock Option Plan which provides for the grant of nonstatutory options to directors who are not officers or employees of the Company. As of December 31, 2005, Cardiogenesis had reserved 1,025,000 shares of common stock for issuance under this plan. Under this plan, options are granted at the trading price of the common stock at the date of grant. Options generally vest over twelve to thirty-six months and expire ten years from date of grant. No shares of common stock issued under the plan are subject to repurchase.

CARDIOGENESIS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Employee Stock Purchase Plan:

Cardiogenesis maintains an Employee Stock Purchase Plan (ESPP), under which 1,678,400 shares of common stock have been reserved for issuance. Cardiogenesis adopted the ESPP in April 1996. The purpose of the ESPP is to provide eligible employees of Cardiogenesis with a means of acquiring common stock of Cardiogenesis through payroll deductions. Eligible employees are permitted to purchase common stock at 85% of the fair market value through payroll deductions of up to 15% of an employee's compensation, subject to certain limitations. During fiscal years 2005, 2004 and 2003, approximately 273,000, 184,000 and 131,000 shares, respectively, were sold through the ESPP.

Option activity under the Stock Option Plan and the Directors Stock Option Plan is as follows (*in thousands, except per share amounts*):

	Shares Available for Grant	Number of Shares	Weighted Average Price per Share
			Outstanding Options
Balance, December 31, 2002	1,320	3,477	\$ 1.74

	4,537	7.04	\$ 1.10	4,048	\$ 1.16

The Company's stock options exercisable under the Stock Option Plan and the Director's Stock Option Plan at December 31, 2005 and 2004 were 4,048,000 and 3,407,000 shares, respectively.

11. Employee Retirement Plan:

Cardiogenesis maintains a 401(k) plan for its employees. The plan allows eligible employees to defer up to 15% of their earnings, not to exceed the statutory amount per year on a pretax basis through contributions to the plan. The plan provides for employer contributions at the discretion of the Board of Directors. For the years ended December 31, 2005, 2004 and 2003, \$234,000, \$115,000 and \$85,000 of employer contributions were made to the plan, respectively.

12. Segment Disclosures

The Company operates in one segment. The principal markets for the Company's products are in the United States. International sales occur in Europe, Canada and Asia and amounted to \$676,000, \$483,000 and \$415,000 for the years ended December 31, 2005, 2004 and 2003, respectively. The international sales represent 4%, 3% and 3% of total sales for the years ended December 31, 2005, 2004 and 2003, respectively. The majority of international sales are denominated in Euros and any related foreign currency gains and losses are considered insignificant.

Table of Contents

CARDIOGENESIS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

13. Income Taxes:

Significant components of Cardiogenesis' deferred tax assets are as follows (*in thousands*):

	December 31	
	2005	2004
Net operating losses	\$ 54,496	\$ 53,751
Credits	3,648	3,627
Research and development	991	748
Reserves	637	355
Accrued liabilities	288	1,099
Depreciation/Amortization	350	195
Net deferred tax asset	60,410	59,775
Less valuation allowance	(60,410)	(59,775)
Net deferred tax assets	\$	\$

The Company has established a valuation allowance to the extent of its deferred tax assets because it was determined by management that it was more likely than not at the balance sheet dates that such deferred tax assets would not be realized. At such time as it is determined that it is more likely than not that the deferred tax assets are realizable, the valuation allowance will be reduced.

As of December 31, 2005, the Company had federal and state net operating loss carryforwards of approximately \$155,232,000 and \$31,144,000, respectively, to offset future taxable income. In addition, the Company had federal and state credit carryforwards of approximately \$2,532,000 and \$1,467,000 available to offset future tax liabilities. The Company's net operating loss carryforwards, as well as federal credit carryforwards, will expire at various dates beginning in 2008 through 2024, if not utilized. Research and experimentation credits carry forward indefinitely for state purposes. The Company also has manufacturers investment credits for state purposes of approximately \$223,000.

The Internal Revenue Code limits the use of net operating loss and tax credit carryforwards in certain situations where changes occur in the stock ownership of a company. The Company believes that the sale of common stock in its initial public offering and the merger with Cardiogenesis resulted in changes in ownership which could restrict the utilization of the carryforwards.

Income tax expense for each of the three years ended December 31, 2005 represented current state minimum taxes of \$800 per year.

14. Risks and Concentrations:

Cardiogenesis sells its products primarily to hospitals and other healthcare providers in North America, Europe and Asia. Cardiogenesis performs ongoing credit evaluations of its customers and generally does not require collateral. Although Cardiogenesis maintains allowances for potential credit losses that it believes to be adequate, a payment default on a significant sale could materially and adversely affect its operating results and financial condition. At December 31, 2005, three customers individually accounted for 23%, 13%, and 10% of gross accounts receivable. For the years ended December 31, 2005, 2004 and 2003, no customer individually accounted for 10% or more of net revenues.

At December 31, 2005 and 2004, the Company had amounts on deposit with financial institutions in excess of the federally insured limits of \$100,000.

Table of Contents

CARDIOGENESIS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Certain components of laser units and fiber-optic handpieces are generally acquired from multiple sources. Other laser and fiber-optic components and subassemblies are purchased from single sources. Although the Company has identified alternative vendors, the qualification of additional or replacement vendors for certain components or services is a lengthy process. Any significant supply interruption would have a material adverse effect on the Company's ability to manufacture its products and, therefore, would harm its business. The Company intends to continue to qualify multiple sources for components that are presently single sourced.

15. Subsequent Events:

From January 1 through June 30, 2006, the Company issued 56,000 shares of common stock in connection with purchases under the ESPP and 116,000 shares in connection with the exercise of options.

On July 12, 2006, the Company terminated Michael Quinn as Chairman, Chief Executive Officer and President in accordance with the terms of his employment agreement. Mr. Quinn has subsequently alleged wrongful termination and a breach of his employment agreement and has indicated that he believes he is entitled to monetary damages in excess of \$4,750,000 plus other, non-economic damages, including punitive damages. As of July 22, 2006, the Company had not been informed of the initiation of any formal legal proceedings.
